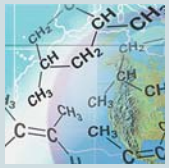
EPA and Open Source Software

Dalroy Ward, EPA

November 5, 2009



Why Open Source?

- Low cost of entry
- Many open source tools provide useful environments to build applications
- Many options available with a range of features
  - Blogs, wikis, instant messaging, file sharing workspaces, social networking tools

How Active is Open Source in EPA

- Linux
- Apache web server
  - Tomcat for java
- PHP
- MySQL
- MediaWiki
- Wordpress
- R
- And others….

How are we using Open Source: Blogs

- A blog is a web site providing simplified posting of text, material and comments
- Blogs
  - Support a journalistic collaboration style with interactive dialog
  - Can be moderated
  - Can be limited to registered users or open to public
  - Are well suited for public facing collaboration, discussion, and comment because they can be moderated
  - Can be used to support regulatory development and strategic planning

- Greenversations is the official EPA public blog
- EPA Administrator's page

- EPA hosts Blogs on the WordPress platform

Greenversations

THE OFFICIAL BLOG OF THE U.S. ENVIRONMENTAL PROTECTION AGENCY

New Climate for Action: Pack a Waste-Free Lunch

Posted on October 28th, 2008 - 10:30 AM

About the author: Ashley Sims, a senior at Indiana University, is a fall intern with EPA's Office of Children's Health Protection and Environmental Education through the Washington Leadership Program.

Managing money is something a student has to learn, particularly as the cost of living rises. If money grew on trees my life would be a lot easier – unfortunately it doesn't. I try to save as much money as I can during the week so I can have plenty left over to enjoy my weekends. My roommates and I try to take a lunch to work every single day – eating out can be very expensive. Plus, some students might get fed up with school lunches. Packing your lunch is cheap, reduces trash and saves energy too!

Lots of trash is generated from the packaging on food and disposable lunches. Did you know that each school lunch generates 67 pounds of waste per school year? That means, just one average-size middle school creates over 40,000 pounds of lunch waste a year. That's a lot of trash! Getting rid of the trash or waste uses energy and releases greenhouses gases into the environment. Start a waste-free program at your school to keep landfills from overflowing and reduce greenhouse gas emissions.

A waste-free lunch program involves educating students, parents, and school staff about where our trash ends up and how we can reduce the amount of trash we generate. Waste-free lunch programs support the use of reusable food containers, drink containers, utensils, and napkins. They discourage the use of disposable packaging, such as prepackaged foods, plastic bags, juice boxes and pouches, paper napkins, and disposable utensils.

Here are some tips to keep in mind while packing your lunch to school or work.
Do include:

- Sandwiches in reusable containers
- Whole fruits without packaging
- Drinks in containers that can be reused, such as a thermos, or recycled, such as a can
- Snacks purchased in bulk and brought in reusable containers

Don't include:

- Individually wrapped snacks
- Plastic baggies that are not reusable
- Disposable forks and spoons
- Straws

Your waste-free lunch program will help create a new climate for action by reducing trash, saving energy and reducing greenhouse gas emissions. And you will save money too! Be sure to let me know what you are doing to reduce lunch waste.

For more information on Waste-Free Lunches go to http://www.epa.gov/epawaste/education/lunch.htm

Question of the Week: What are your energy vampires?

Posted on October 27th, 2008 - 10:30 AM

Each week we ask a question related to the environment. You can answer the poll or let us know your thoughts as comments. Feel free to respond to earlier comments or post new ideas. Previous questions.

Vampires could be lurking the shadows of your home. Energy vampires continuously suck energy from electrical outlets and unnecessarily waste energy. These vampires won't drain your blood; they'll drain your pockets! Energy vampires cost Americans almost $10 billion a year, and account for almost 11 percent of all U.S. energy use!

Energy vampires are the electronics, adapters, and appliances with fangs in your outlet, sucking power even when apparently not in use or "off." For example, a TV always uses a little power so it can always receive the "on" signal from the remote control. Adapters, too, use power even when not plugged into their device. You can easily **check your home for energy vampires** using your power meter. Turn everything off as you normally do, as if you were leaving for the day – but don't unplug anything you don't normally unplug. Now, look at your power meter. What do you have for vampires sucking energy from your home?

What are your energy vampires?

(en español)

How fast is it moving? Like a…

- mummy – barely shuffling around at all
- zombie – limping along but not dangerously
- werewolf – chasing around faster than expected
- vampire – flying like batwings at high speed

View Results

En español: Cada semana hacemos una pregunta relacionada al medio ambiente. Por favor comparta con nosotros sus pensamientos y comentarios. Siéntase en libertad de responder a comentarios anteriores o plantear nuevas ideas. Preguntas previas.

Podrían haber vampiros al asecho en las penumbras de su hogar. Los vampiros de energía continuamente chupan energía de los interruptores eléctricos y malgastan innecesariamente la energía. Estos vampiros no le chupan la sangre. Al contrario, ¡están vaciando sus bolsillos! Los vampiros de energía cuestan a los estadounidenses alrededor de $10 mil millones cada año lo cual representa cerca del 11 por ciento de toda la energía usada en EE.UU.!

Los vampiros de energía son los efectos electrónicos, adaptadores, enseres eléctricos cuyos colmillos clavan al interruptor y chupan la energía aún cuando aparentemente estos aparatos no están en uso o está apagado ("off"). Por ejemplo, un televisor siempre usa un poco de energía para que pueda recibir la señal de "on" del control remoto. Los adaptadores también usan energía aún cuando no se le haya enchufado el efecto electrónico. Usted puede **verificar si hay vampiros de energía en su hogar** utilizando un medidor de energía. Apague todo como normalmente hace como si fuera estar fuera de la casa por todo el día, pero no desenchufe nada. Entonces mire su medidor de energía. ¿Cuáles son algunos de los vampiros que están chupando la energía de su hogar?

¿Qué son los vampiros de energía?

¿Cuán rápido se mueve? Quizás como

- una momia -- apenas deambulándose
- un zombi -- cogeando lentamente sin ofrecer peligro
- un hombre lobo -- asechando de manera más rápida que lo previsto
- un vampiro -- volando como alas de murciélago a alta velocidad

OIAA's Collaborative Intranet

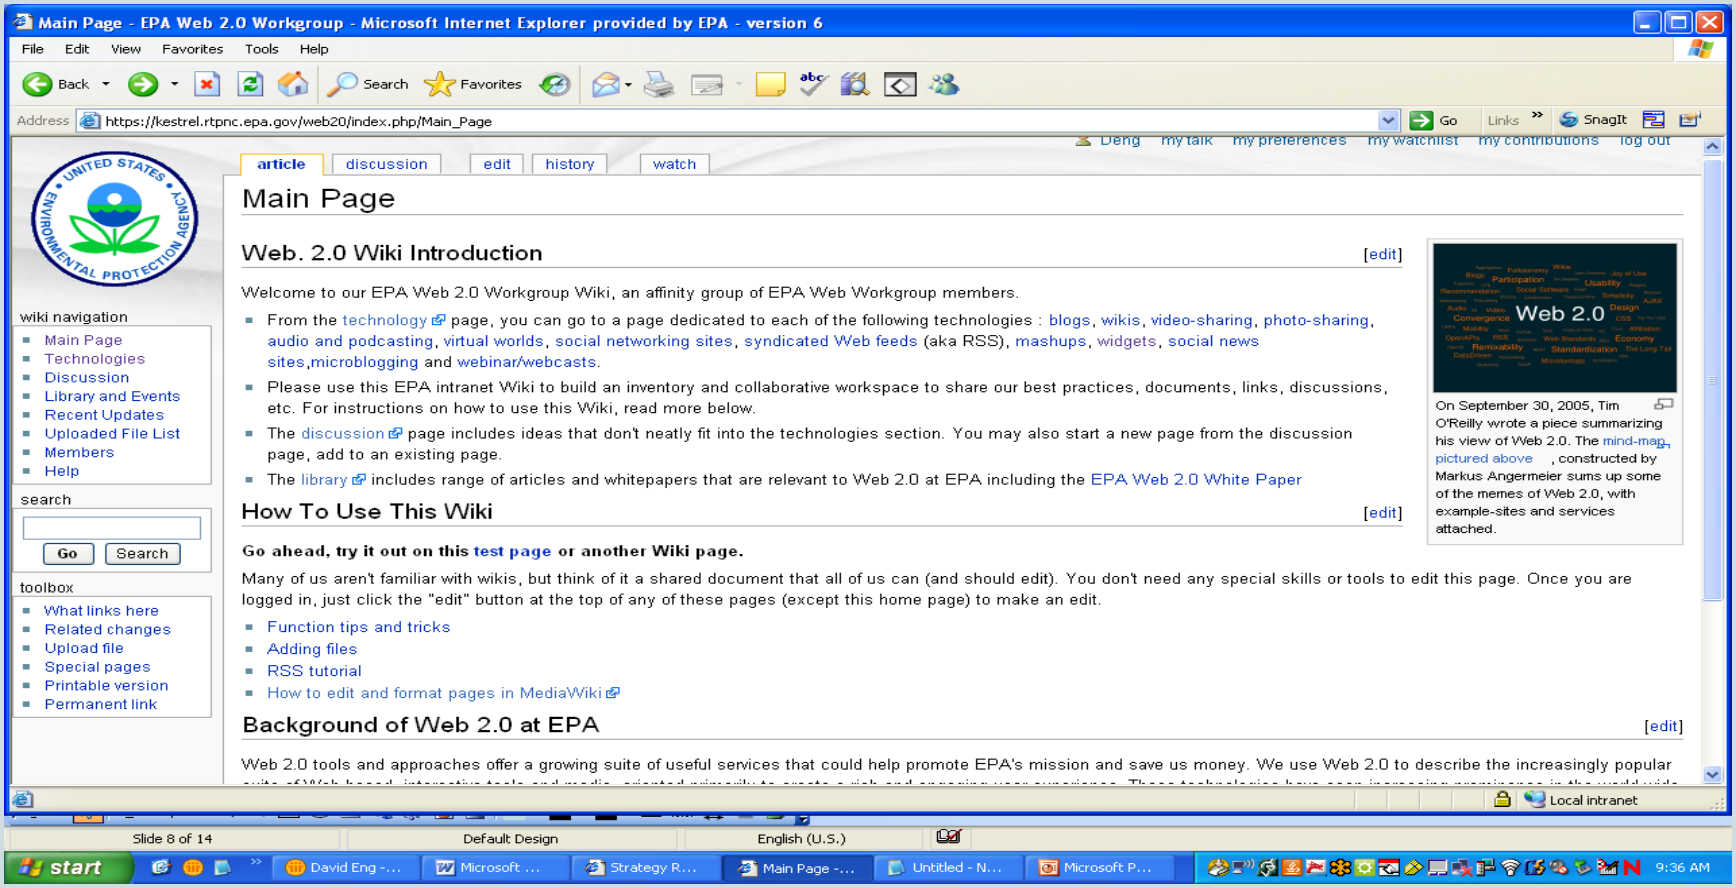
How is EPA using Open Source: Wikis

- A wiki is web site that is easily editable by multiple users
- Wikis
  - Support a structured document or web site style
  - Cannot currently be moderated
  - Are best suited to the collaborative development of web sites providing structured documentation or information sharing
  - Can be authenticated or anonymous although EPA does not currently support anonymous wikis

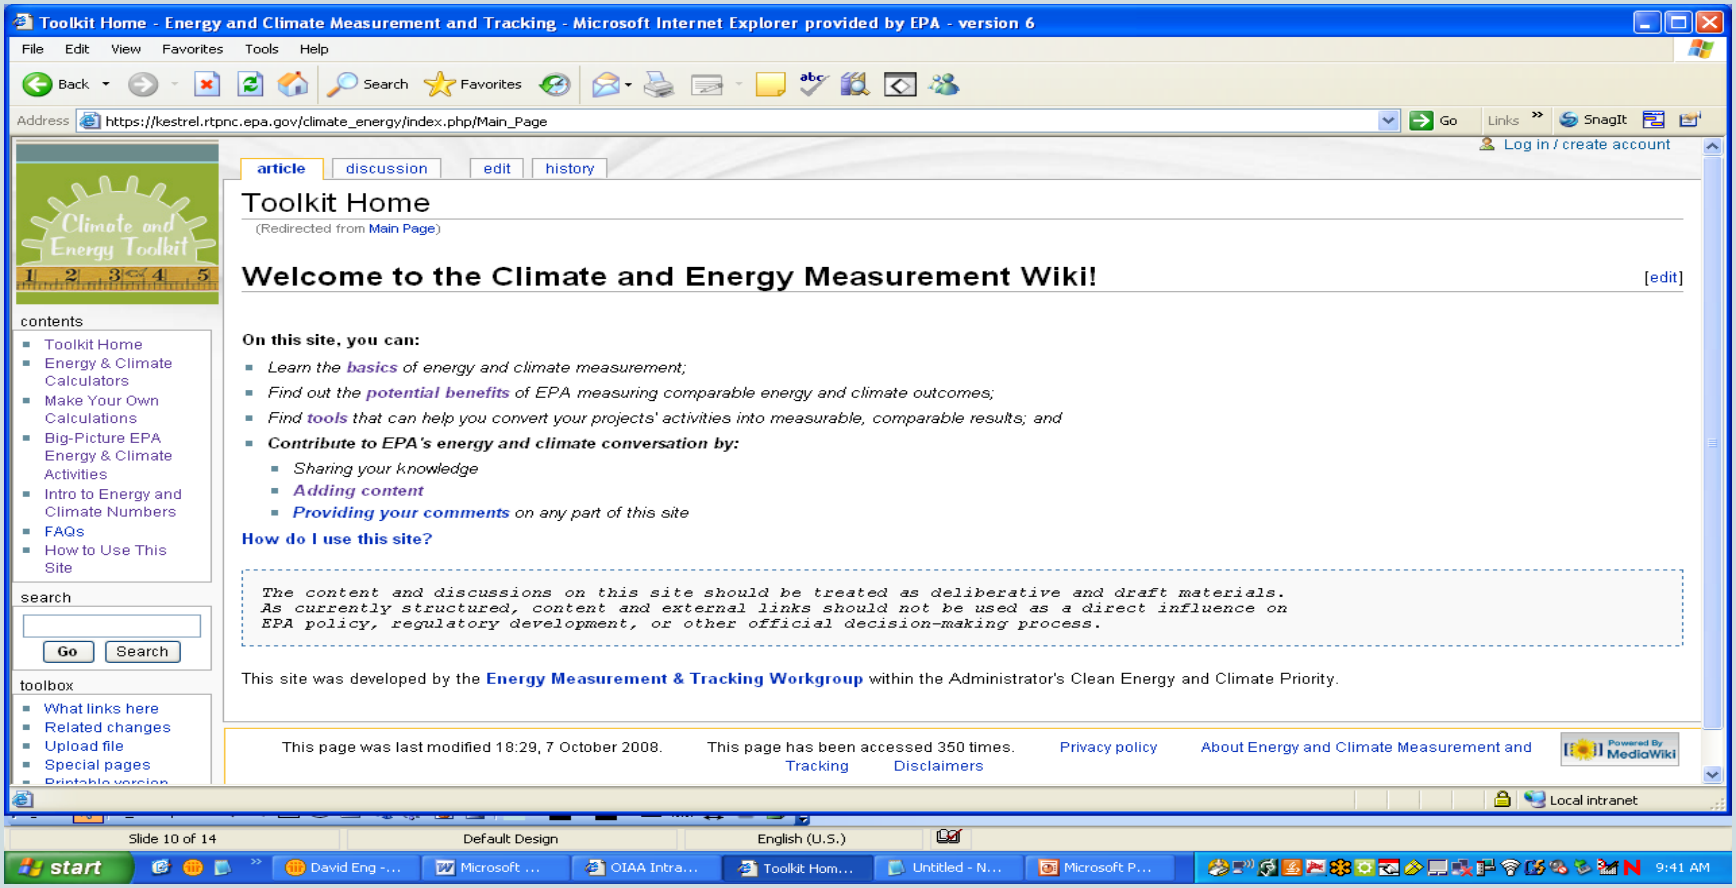
- OEI hosts over 45 EPA Wiki's
  - All are internal wiki's either restricted to Intranet or authenticated users
  - EPA does not currently support anonymously accessed public wiki's

- EPA wiki's are hosted using the MediaWiki platform

Web Communities Collaboration



Climate and Energy Tools



What's Coming – Social Networking

- EPA is currently working to deploy Liferay to be used internally for Social Networking within the Agency
  - Staff can maintain their profile including their position, expertise, group memberships, and other information.
  - Supports the creation of groups to facilitate staff interaction through discussion lists, document libraries, and by linking to the existing wiki and blog software.
  - Integrated with Agency email and instant messaging.
  - Will replace 3 agency systems maintained for "finding staff expertise".

Open Source – Is it Free?

- No licensing cost doesn't mean "free"
- Costs for remediation of security issues
- Costs for installation and infrastructure
- User support

Can Open Source be Secure?

- Open Source software is the same as any other code you get
- Review the code and run security scans
- Remediate any issues
- Dedicated platform if required
- Keep up with updates that patch known security issues
- Treat it like any other software!

Open Source is part of the answer

- No one way of getting software can answer all needs (COTS, Open Source, custom code).
- Treat Open Source like any other custom code
- Provides many useful tools, often at lower costs.
- Safe if you do your homework!

Open Source is a valuable part of your infrastructure!

Use case for PURL based iphone interface for Aegir

ADRIAN 5:06pm Thu Jun 4

Tagged: context hosting purl

As discussed in the meeting yesterday, it would be great if aegir could provide an iphone based user interface for remote administration of sites. One of the aspects that would help in this regard is that Aegir is designed to be 'whiteboxed', so it provides a (mostly) standard Drupal user interface.

This is a bit far off, as Aegir does not currently have views 2.x support, but these are the things I would like to be able to do :

1. View listings

The user should be able to log into their account, and be able to view the list of sites and the list of tasks for those sites.

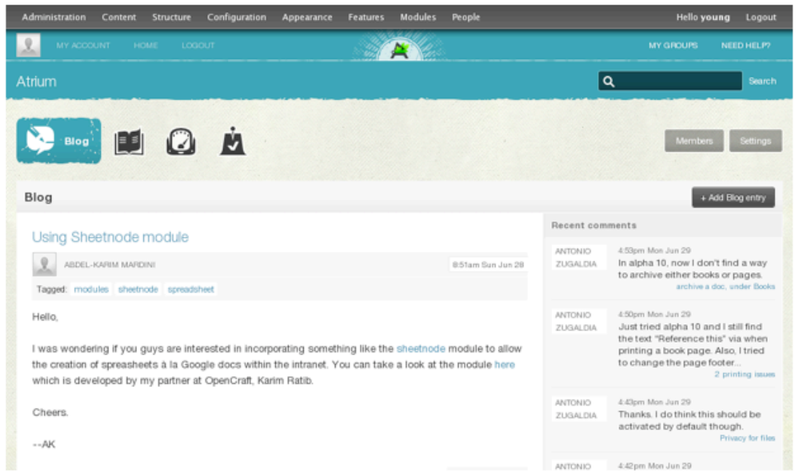
Atrium Alpha 11 (Final)

YOUNG 4:45pm Fri Jul 10

Referenced Page:
Code



The scene "skin" — 2 sprite overrides and less than 100 lines of CSS.

Hi everyone — I've added the Atrium Alpha 11 tarball. This is the last alpha tag we'll be pushing out, and you can expect it to be very close if not identical (unless we find some serious critical bugs) to the first beta that we release publicly next week.

Notes on this release

- Lots of bugfixes
- Added the scene theme — it is an example "skin" for Atrium.

Subversion: A quick conceptual introduction

NEW

IAN W. 10:02pm Apr 12, 2009

#3 by Ian C View revision Turn off highlighting

SVN (Subversion) lets you save versions of files, or save the current state of a group of files and give that version a “tag”. This allows you to incrementally save changes to your code.

Introduction – Why Version Control?

If you’re reading this, chances are you already know why you should use version control. If you’re still not convinced, perhaps someone recommended you read this guide. The case for version control usage is strong, and the reasons are many. To explain in an analogy: not using version control for website source code is like trying to edit a Word document in a team of 5 people without “track changes”; in very little time you’ll have no idea who changed what, when, nor why, and in the same amount of time you’ll have suffered avoidable bugs and worse, irreversible data loss. It's a fact – non-use of version control leads to more mistakes and ultimately failure as a team of developers.

This document tries to provide a practical how-to for getting started using SVN with Drupal.

1. Repository organization

You can organize your SVN repository in numerous ways, but it’s best to stick to some type of formalized organization. Take the following organization for example:

The top level view
/drupal/example.com
/drupal/example.net
/drupal/vendor

الرئيس باراك أوباما بمناسبة فوزه بجائزة نوبل للسلام:

الوقت الذي يختتم فيه المسلمون في الولايات المتحدة وحول العالم شهر رمضان، ويحتفلون بحلول عيد الفطر، يطيب لميشال ولي أن نتقدم بتحياتنا الشخصية بهذه المناسبة السعيدة. والعيد هو وقت للاحتفال بإتمام 30 يوما وليلة من التعبد. ولكن حتى في هذه المناسبة البهيجة، يتذكر المسلمون أولئك الذين هم أقل حظا، بمن فيهم أولئك المنكوبون بالفقر والجوع والنزاعات والأمراض.

القنصل الأمريكي العام يدشن الجمعية الفلسطينية الأمريكية الجديدة لخريجي برامج التبادل الثقافي

دشن القنصل الأمريكي العام دانيال روبنستين الجمعية الفلسطينية الأمريكية لخريجي برامج التبادل الثقافي وذلك يوم الجمعة في مركز المناع في رام الله وبحضور حوالي 65 خريج من برامج التبادل الثقافي التي تدعمها الحكومة الأمريكية. كما شارك حوالي 30 خريج من غزة عبر الفيديو كونفرنس.

الرئيس في الجمعية العامة للأمم المتحدة:

"عيّنت، بمجرد أن توليت السلطة، مبعوثا خاصا لسلام الشرق الأوسط، وعملت الولايات المتحدة بجد في سبيل حل الدولتين – إسرائيل وفلسطين – يستتب فيهما السلام والأمن وتُحترم حقوق الإسرائيليين والفلسطينيين على السواء."

U.S. Businesses Court Hispanic Consumers

Intro | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11

There are 47 million Americans of Hispanic origin, the largest Latino population in the world outside of Mexico. Hispanics control more disposable income than any other minority group in the United States and are nine years younger on average than the average American. They spend more than non-Hispanics on groceries, telephone services, clothing and gas and own more expensive homes, by median price. Businesses, eager to sell to Hispanic consumers, are catering to Hispanic tastes and needs, as well as donating money to charities important to the Hispanic community.

Modernizing the electric grid

— By Michelle Austein Brooks, 27 October 2009

President Obama visited a solar power plant in Arcadia, Florida today, the largest of its kind in the United States. The plant provides electricity for the entire city.

To realize the full potential of solar plants, the United States needs to modernize its electrical grid, which "runs on century-old technology," Obama said. He said it is "time to build a clean-energy superhighway" that can deliver power to people across the country in the most affordable and efficient way possible."

The president said his administration is making the largest-ever investment in the electric grid, in the form of 100 grants totaling $3.4 billion. These grants will go to companies or cities to help them install smart-grid technologies. A fact sheet about this investment is available on the White House Web site.

Not very familiar with smart grid technologies? *America.gov* has a ton of material on the topic, you can check it out here.

GOSCON 2009

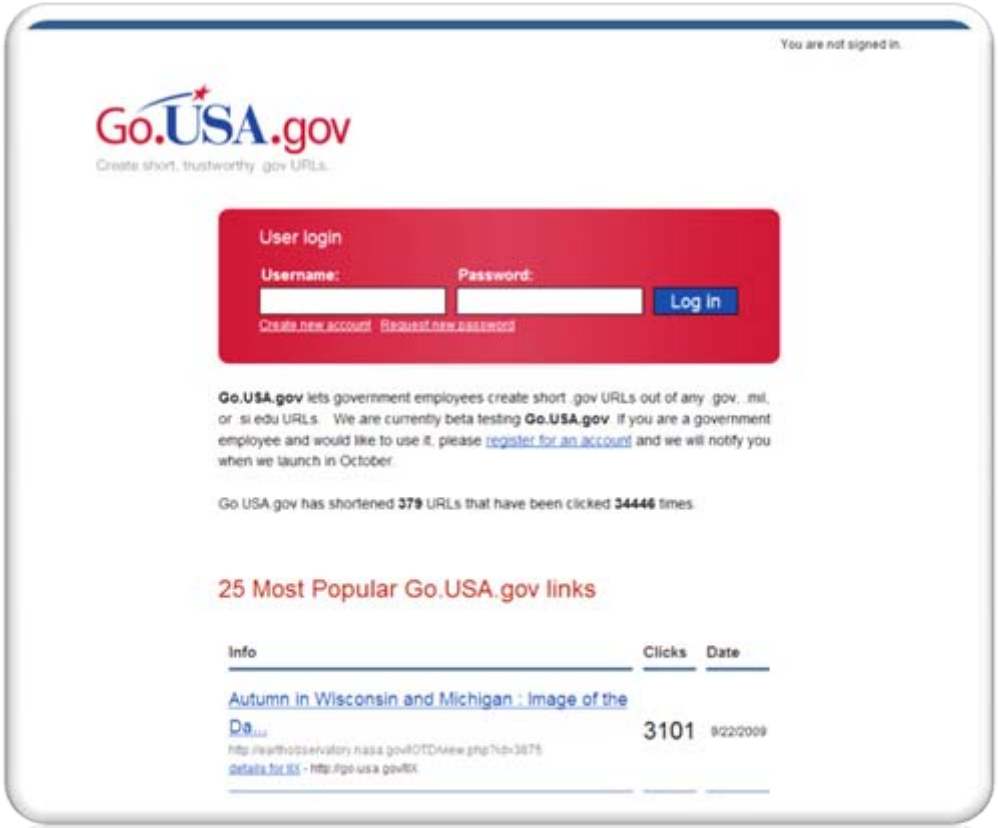
Russell O'Neill

IT Project Manager

General Services Administration

What is Go.USA.gov?

- A URL shortener for trustworthy .gov URLs.
- A way to gather metrics across Government.



Who built it?

- A collaborative effort across government.
- Initially developed by General Services Administration, Veterans Administration, and the Drupal community.

Government only

- This service only shortens government URLs: .mil, .gov, .fed.us, and .si.edu.
- Only open to government employees.

GOSCON D. C.
GOVERNMENT OPEN SOURCE CONFERENCE

How it can help government?

- Authoritative source
- Data!
- Avoid duplication

Photo from http://www.flickr.com/photos/joeltelling/ (CC BY-SA 2.0)

Metrics from across government

25 Most Popular Go.USA.gov links

How it's been used so far?

- Currently in limited Beta test
- Almost 400 Go.USA.gov URLs
- Clicked over 34,000 times

How we built it?

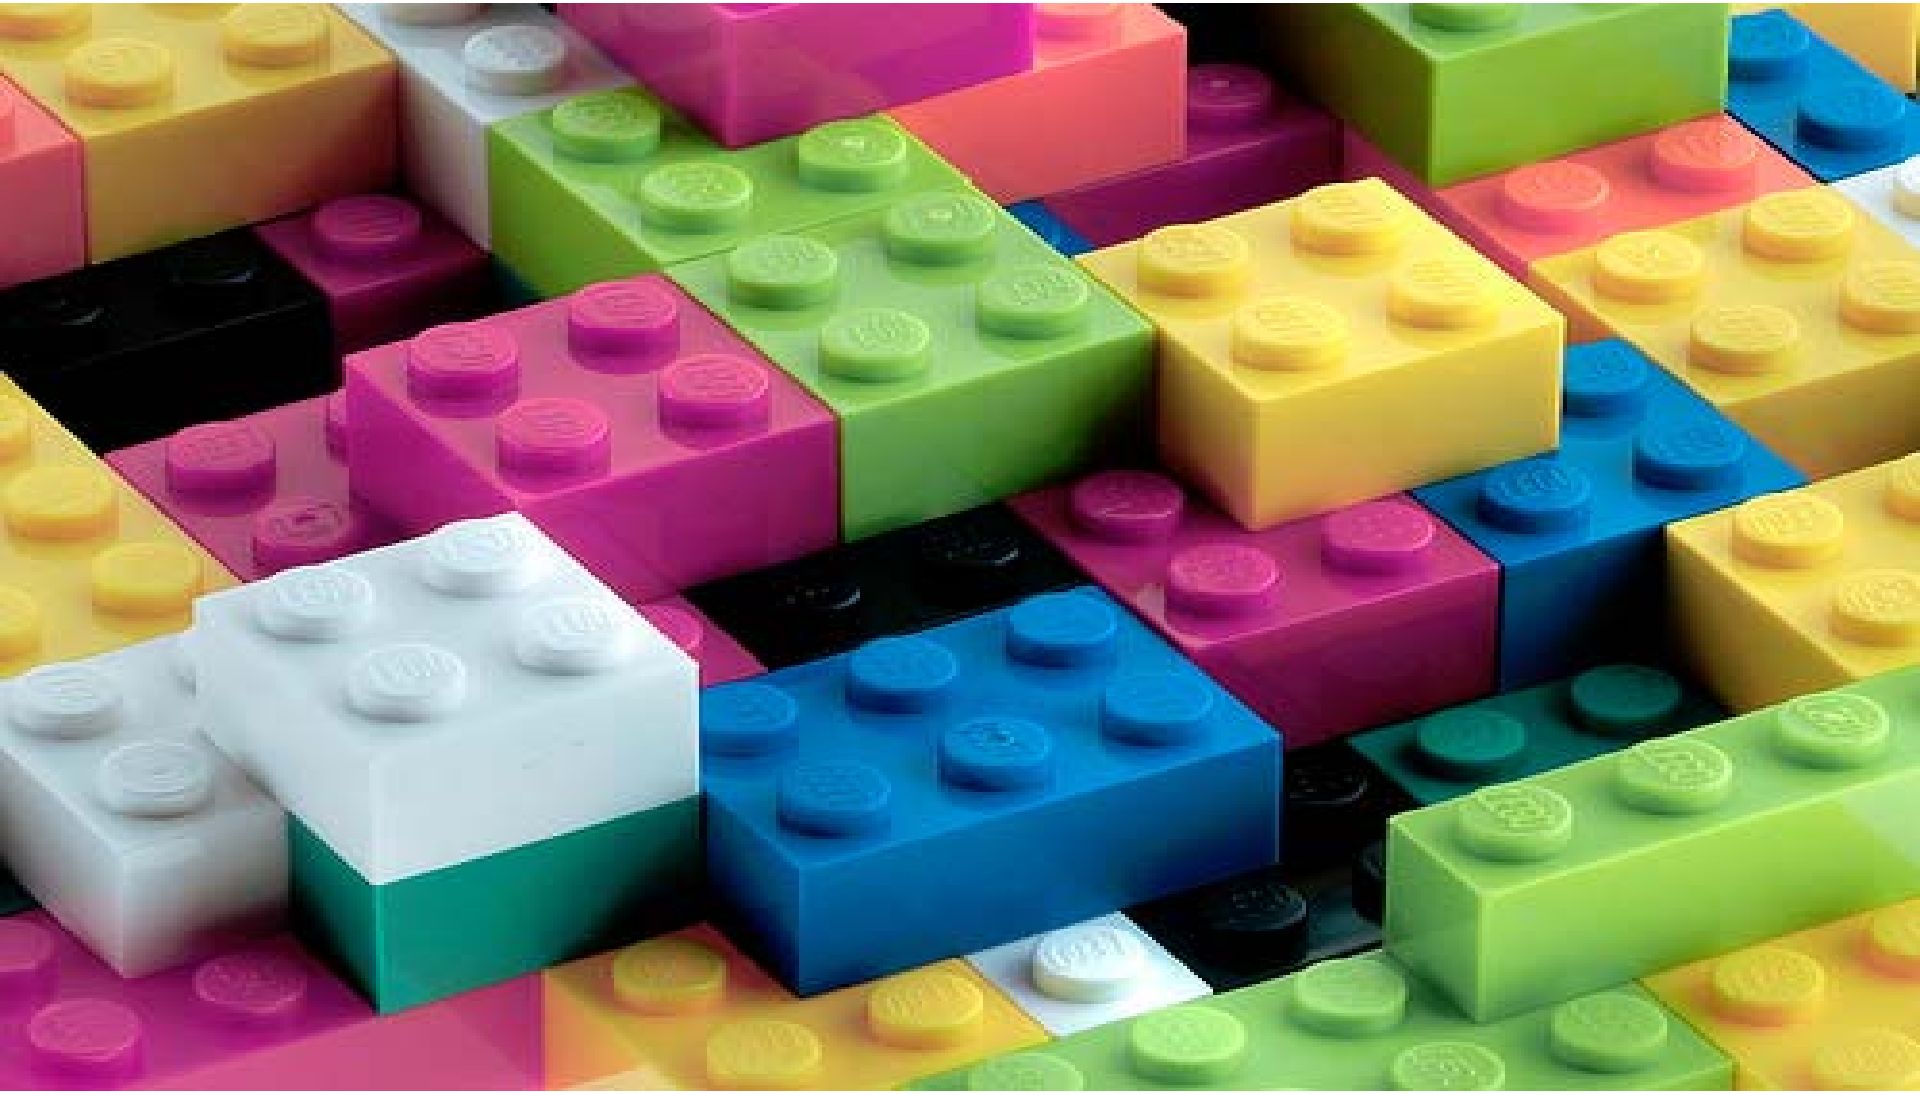

Photo from http://www.flickr.com/photos/soft/ (CC BY-NC-ND 2.0)

Drupal

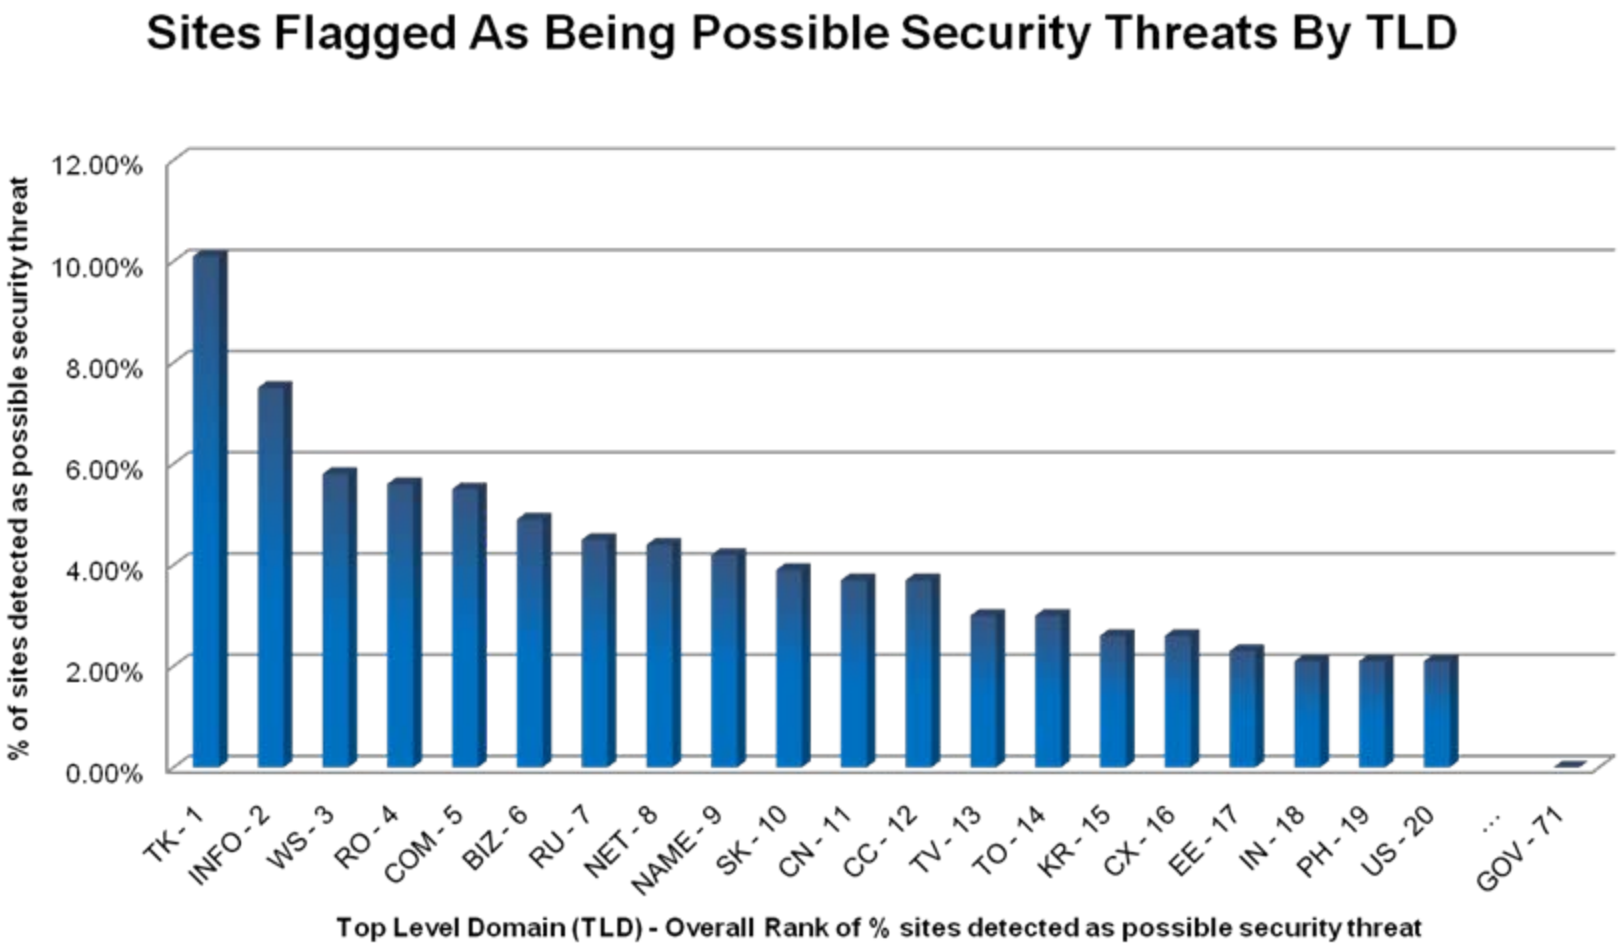
- Great platform to create and manage Go.USA.gov.
- There's a module for that!

GOSCON D. C.
GOVERNMENT OPEN SOURCE CONFERENCE

Security

- Inherent security in only .gov
- Drupal security

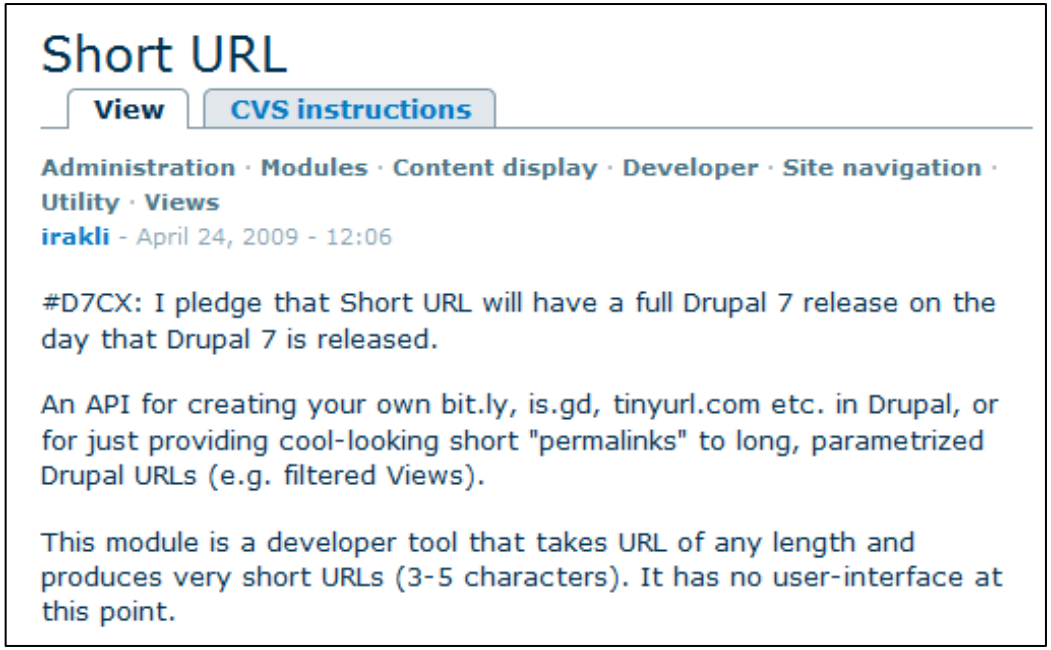
Inherent security in only .gov



Source: McAfee Survey from 2007 (http://www.siteadvisor.com/studies/map_malweb_mar2007.html)

Drupal modules: Short URL

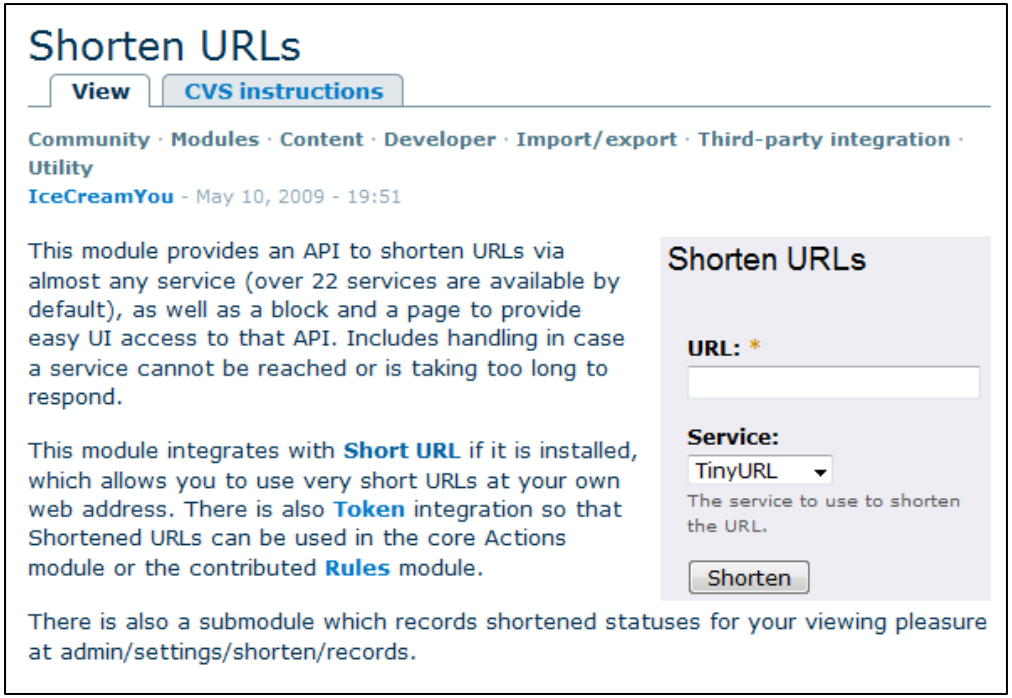
- Provides ability to create short URLs for your own domain
- Metric tracking



- Maintained by: irakli
- Info at http://drupal.org/project/shorturl

Drupal modules: Shorten

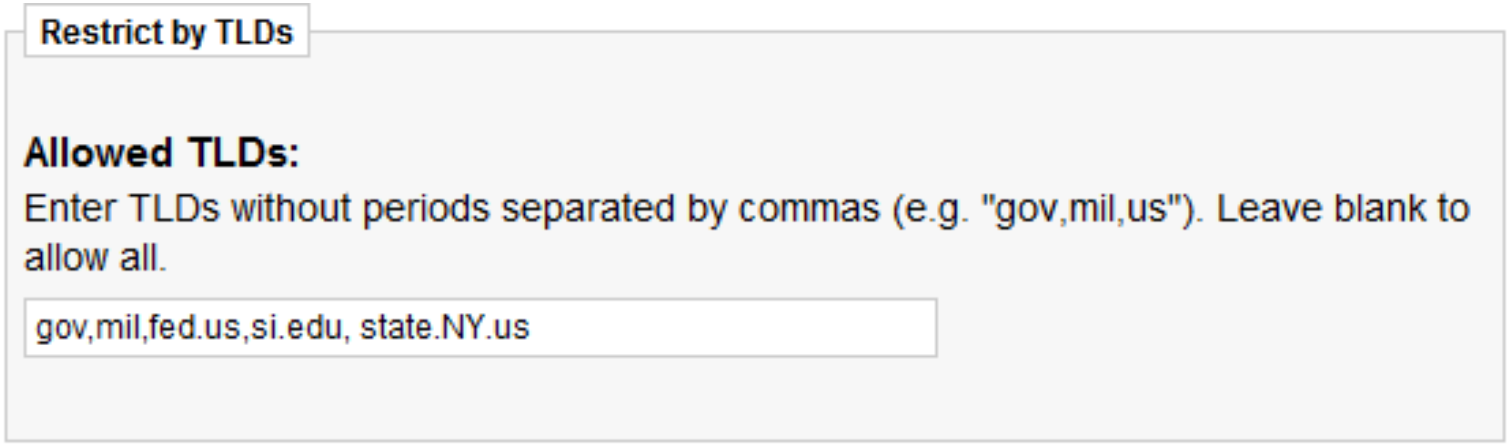
- Works with Short URL to provide UI framework



- Maintained by: IceCreamYou
- Info at http://drupal.org/project/shorten

Drupal modules: TLD Restriction

- Integrates with the Shorten module to allow only certain top level domains to be shortened.
- Maintained by: seanr
- Info at http://drupal.org/project/tldrestrict



Go Theme

- Custom developed for Go.USA.gov (but based on Blueprint theme as the base)
- Provides UI and glues the modules together

Project Manager, Budget Systems Branch, Office of Management & Budget (OMB)
Office of Management & Budget

MAX Open Source Technology Overview

Prepared for Government Open Source Software Conference '09

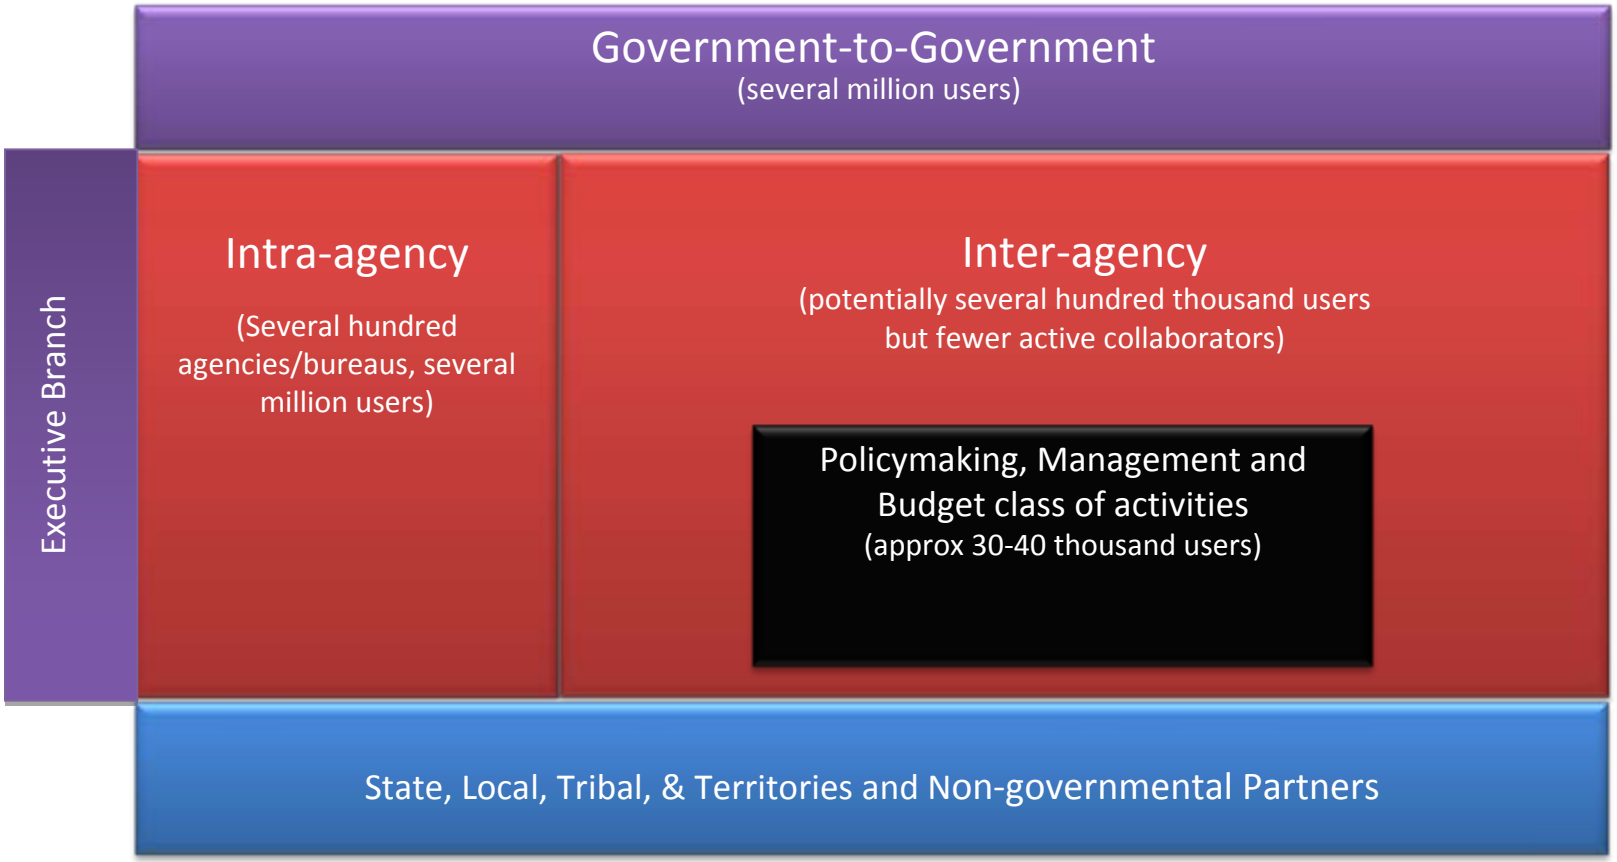
What is MAX?

- **OMB's central budget information system**. Also, the system of the Budget Formulation and Execution Line of Business (BFELoB).

- Essential to OMB activities:
  - ✓ Developing & publishing the annual President's Budget.
  - ✓ Tracking policy decision making, congressional action, continuing resolutions, budget negotiations, ...
  - ✓ Analytical reporting and modeling.

- Also essential to agency activities:
  - ✓ Development of the President's Budget database (MAX A-11).
  - ✓ Data collection and tracking exercises.
  - ✓ Government-wide inter-agency collaboration, information sharing, and knowledge management through the MAX Federal Community.

MAX Scope



E-GOV

MAX Common Solutions Overview

Agency Budgeting Tools

Analytical Tools - Tools for data analysis, reporting, modeling, and scenario building

Budget Execution and Financial Management Integration

Budget Performance Integration

Collaboration - Tools and services that improve information sharing, communication, and collaborative work among government organizations:

Data Collection & Tracking - Tools and Services that capture, process, and manage data government-wide

Document Production - Document publication tools that automatically integrate numbers and text.

Knowledge Management - Tools and services that capture, organize, store, and share knowledge and experiences.

Human Capital (the Federal Budgeting Profession)

Program Management (Coordination, Standards, Architecture)

MAX Services (SaaS & PaaS)

Components

- Database
- Provisioning
- Web Framework
- Workflow
- Analytical Tools / B.I.
- Publishing
- Security

Tools

Collaboration & Info Sharing

- *MAX Federal Community*
- *Online Meetings*

Gov't-wide Data Collection, e.g.:

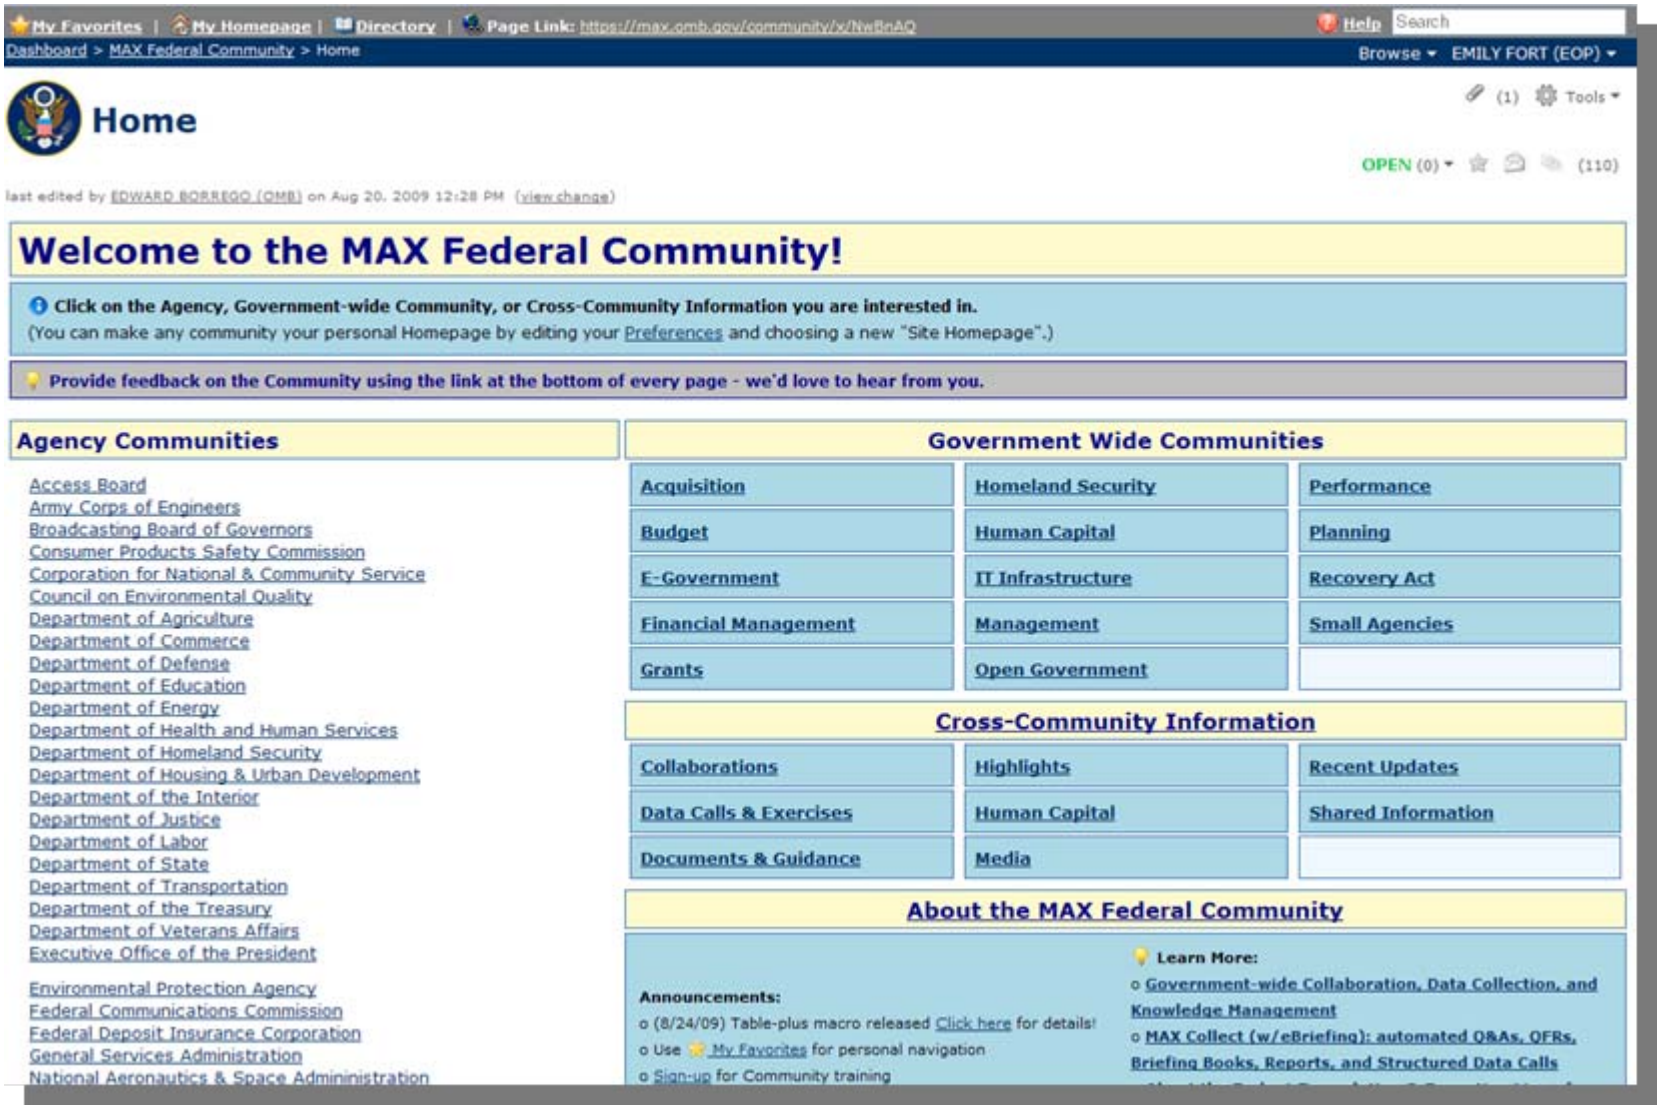
- *A-11 (President's Budget)*
- *Earmarks*
- *Improper Payments*
- *ITWeb*
- *Outlay Plans*
- *Others*

Agency Data Collection, e.g.:

- *MAX Federal Community*
- *MAX Collect*

E-GOV

MAX Federal Community – 25,000+ Users



MAX Technology Principles

- Our job is enable our business customers do their jobs more effectively
- Deliver value, not products
- Assume success, then enable it to happen (accept no excuses)
- Our core capability is not delivering technology but creating simple solutions to complex problems
- Agility is not a buzzword, it's our way of doing business that promotes iterative and measurable success over time
- We do not fear customization of code for 3rd party software, we plan for it
- Assuming it provides value, we think that a "good enough" solution today is better than a "perfect" solution tomorrow

MAX Achieves its Goals with OSS

- **Good capabilities –** open source solutions have proven robust with many features
- **Complete control and agility** - open source enables us to quickly make modifications to meet our requirements at any point.
- **Eliminates the "success tax"** - helps us focus on scaling needs of the users without worrying about various vendor licensing schemes based on usage that penalize success.
- **Faster startup** - we can often download the code and integrate it quickly.
- **Faster FISMA certification** - we can scan and test the code ourselves.
- **Cost savings on engineering staff** not trained on proprietary solutions.
- **Solutions vs Software** - allows complete customization to OMB's and BFELoB's requirements
- **Speed to deployment** - complete control to quickly accommodate unique government user requirements and Information Assurance requirements.
- **Strong user communities** - many options for support and guidance
- Easier integration and interoperability - can tie together systems easily

Some OSS Challenges to be aware of

- The level of expertise required to manage open source implementations is higher than proprietary solutions
- Documentation and support for open source in some esoteric or smaller industries is not the same as proprietary solutions

MAX Open Source Components

MAX Is a Mixed Environment of COTS, GOTS, Custom, and Open Source. **Our open source components include:**

- Linux operating system
- Apache Webserver
- CAS single sign on framework
- Java Development stack on Linux (including Hibernate and JPA)
- Ruby on Rails Development framework
- Confluence Wiki and Drupal Content Management System
- MySQL database
- Eclipse, FireFox and FireBug for web development
- HTML, HTTP, and other "mashup friendly" technology
