

Package ‘bupaR’

July 7, 2025

Type Package

Title Business Process Analysis in R

Version 0.5.5

Description Comprehensive Business Process Analysis toolkit. Creates S3-class for event log objects, and related handler functions. Imports related packages for filtering event data, computation of descriptive statistics, handling of 'Petri Net' objects and visualization of process maps. See also packages 'edeaR', 'processmapR', 'eventdataR' and 'processmonitR'.

License MIT + file LICENSE

Encoding UTF-8

RoxygenNote 7.3.2

Depends R (>= 3.5.0)

Imports magrittr, dplyr, data.table, shiny, miniUI, pillar, purrr, tidyverse, tibble, glue,forcats, rlang (>= 1.0.0), cli (>= 3.2.0), eventdataR (>= 0.2.0), stringr, stringi, lubridate, lifecycle, ggplot2

URL <https://bupar.net/>, <https://github.com/bupaverse/bupaR/>,

<https://bupaverse.github.io/bupaR/>

Suggests covr, lintr, edeaR, testthat (>= 3.1.3)

Config/testthat/edition 3

NeedsCompilation no

activities	<i>Activities</i>
------------	-------------------

Description

Returns a tibble containing a list of all activity types in the event log, with their absolute and relative frequency

Usage

```
activities(log, ..., eventlog)

## S3 method for class 'activitylog'
activities(log, ..., eventlog = deprecated())

## S3 method for class 'grouped_log'
activities(log, ..., eventlog = deprecated())
```

Arguments

log	log: Object of class log or derivatives (grouped_log , eventlog , activitylog , etc.).
...	Unused.
eventlog	[Deprecated] ; please use log instead.

Methods (by class)

- `activities(activitylog)`: Compute activity frequencies
- `activities(grouped_log)`: Compute activity frequencies

See Also

[activity_id](#), [activity_instance_id](#), [eventlog](#)

activitylog	<i>Create activity log</i>
-------------	----------------------------

Description

Create activity log

Usage

```
activitylog(activitylog, case_id, activity_id, resource_id, timestamps, order)
```

Arguments

<code>activitylog</code>	The data object to be used as activity log. This can be a <code>data.frame</code> or <code>tibble</code> .
<code>case_id</code>	The case classifier of the activity log. A character vector containing variable names of length 1 or more.
<code>activity_id</code>	The activity classifier of the activity log. A character vector containing variable names of length 1 or more.
<code>resource_id</code>	The resource identifier of the activity log. A character vector containing variable names of length 1 or more.
<code>timestamps</code>	The columns with timestamps referring to different lifecycle events. A character vector of 1 or more. These should have one of the following names: "schedule", "assign", "reassign", "start", "suspend", "resume", "abort_activity", "abort_case", "complete", "manualskipped". These columns should be of the <code>Date</code> or <code>POSIXct</code> class.
<code>order</code>	Configure how to handle sort events with equal timestamps: <code>auto</code> will use the order in the original data, <code>alphabetical</code> will sort the activity labels by alphabet, <code>sorted</code> will assume that the data frame is already correctly sorted and has a column ' <code>.order</code> ', providing a column name will use this column for ordering (can be numeric or character). The latter will never overrule timestamp orderings.

<code>activity_id</code>	<i>Activity classifier</i>
--------------------------	----------------------------

Description

Get the activity classifier of an object of class `eventlog`.

Usage

```
activity_id(x)

## Default S3 method:
activity_id(x)

## S3 method for class 'log_mapping'
activity_id(x)
```

Arguments

`x` `log`: Object of class `eventlog` or `activitylog`, or `mapping`.

Methods (by class)

- `activity_id(default)`: Retrieve activity identifier from log
- `activity_id(log_mapping)`: Retrieve activity identifier from mapping

See Also

[eventlog](#), [activitylog](#), [mapping](#)

Other Classifiers: [activity_instance_id\(\)](#), [case_id\(\)](#), [lifecycle_id\(\)](#), [resource_id\(\)](#), [set_activity_id\(\)](#), [set_activity_instance_id\(\)](#), [set_case_id\(\)](#), [set_lifecycle_id\(\)](#), [set_resource_id\(\)](#), [set_timestamp\(\)](#), [timestamp\(\)](#), [timestamps\(\)](#)

activity_instance_id *Activity instance classifier*

Description

Get the activity instance classifier of an object of class `eventlog`.

Usage

```
activity_instance_id(x)

## S3 method for class 'eventlog'
activity_instance_id(x)

## S3 method for class 'eventlog_mapping'
activity_instance_id(x)

## S3 method for class 'activitylog'
activity_instance_id(x)

## S3 method for class 'activitylog_mapping'
activity_instance_id(x)
```

Arguments

x An `eventlog` or `eventlog_mapping`

Methods (by class)

- `activity_instance_id(eventlog)`: Retrieve activity instance identifier from `eventlog`
- `activity_instance_id(eventlog_mapping)`: Retrieve activity instance identifier from `eventlog_mapping`
- `activity_instance_id(activitylog)`: Retrieve activity instance identifier from `activitylog`
- `activity_instance_id(activitylog_mapping)`: Retrieve activity instance identifier from `activitylog_mapping`

See Also

Other Classifiers: [activity_id\(\)](#), [case_id\(\)](#), [lifecycle_id\(\)](#), [resource_id\(\)](#), [set_activity_id\(\)](#), [set_activity_instance_id\(\)](#), [set_case_id\(\)](#), [set_lifecycle_id\(\)](#), [set_resource_id\(\)](#), [set_timestamp\(\)](#), [timestamp\(\)](#), [timestamps\(\)](#)

activity_labels	<i>Get vector of activity labels</i>
-----------------	--------------------------------------

Description

Retrieve a vector containing all unique activity labels

Usage

```
activity_labels(log, eventlog = deprecated())  
## S3 method for class 'log'  
activity_labels(log, eventlog = deprecated())
```

Arguments

log	<code>log</code> : Object of class <code>log</code> or derivatives (grouped_log , eventlog , activitylog , etc.).
eventlog	[Deprecated]; please use log instead.

Methods (by class)

- `activity_labels(log)`: Retrieve activity labels
-

act_collapse	<i>Collapse activity labels of a sub process into a single activity</i>
--------------	---

Description

Collapse activity labels of a sub process into a single activity

Usage

```
act_collapse(log, ..., method, eventlog = deprecated())

## S3 method for class 'eventlog'
act_collapse(
  log,
  ...,
  method = c("entry_points", "consecutive"),
  eventlog = deprecated()
)

## S3 method for class 'activitylog'
act_collapse(
  log,
  ...,
  method = c("entry_points", "consecutive"),
  eventlog = deprecated()
)

## S3 method for class 'grouped_log'
act_collapse(
  log,
  ...,
  method = c("entry_points", "consecutive"),
  eventlog = deprecated()
)
```

Arguments

log	<code>log</code> : Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.).
...	A series of named character vectors. The activity labels in each vector will be collapsed into one activity with the name of the vector.
method	Defines how activities are collapsed: "entry_points" heuristically learns which of the specified activities occur at the start and end of the subprocess and collapses accordingly. "consecutive" collapses consecutive sequences of the activities.
eventlog	[Deprecated] ; please use <code>log</code> instead.

Details

There are different strategies to collapse activity labels (argument 'method'). The "entry_points" method aims to learn the start and end activities of the sub process, by looking at the first and last activity in each case over the whole log. Subsequently, it will create a new instance of the sub process each time there is an end activity followed by a start activity. This strategy will not take into account other activities happening in the mean time. The "consecutive" method will create an instance each time a new sequence of sub activities is started. This strategy will thus only take into account interruptions of the other activity labels.

Methods (by class)

- `act_collapse(eventlog)`: Collapse activity labels of a subprocess into a single activity
- `act_collapse(activitylog)`: Collapse activity labels of a subprocess into a single activity
- `act_collapse(grouped_log)`: Collapse activity labels of a subprocess into a single activity

See Also

Other Activity processing functions: `act_recode()`, `act_unite()`

`act_recode`

Recode activity labels

Description

Recode one or more activity labels through specifying their old and new label

Usage

```
act_recode(log, ..., eventlog = deprecated())

## S3 method for class 'log'
act_recode(log, ..., eventlog = deprecated())

## S3 method for class 'grouped_log'
act_recode(log, ..., eventlog = deprecated())
```

Arguments

- `log` `log`: Object of class `log` or derivatives (`grouped_log`, `eventlog`, `activitylog`, etc.).
- `...` A sequence of named character vectors of length one where the names gives the new label and the value gives the old label. Labels not mentioned will be left unchanged.
- `eventlog` **[Deprecated]**; please use `log` instead.

Methods (by class)

- `act_recode(log)`: Recode activity labels of event log
- `act_recode(grouped_log)`: Recode activity labels of event log

See Also

`eventlog`, `activity_id`, `act_unite`

Other Activity processing functions: `act_collapse()`, `act_unite()`

act_unite	<i>Unite activity labels</i>
-----------	------------------------------

Description

Recode two or more activity labels into a uniform activity label

Usage

```
act_unite(log, ..., eventlog = deprecated())

## S3 method for class 'log'
act_unite(log, ..., eventlog = deprecated())

## S3 method for class 'grouped_log'
act_unite(log, ..., eventlog = deprecated())
```

Arguments

log	<code>log</code> : Object of class log or derivatives (grouped_log , eventlog , activitylog , etc.).
...	A series of named character vectors. The activity labels in each vector will be replaced with the name.
eventlog	[Deprecated] ; please use <code>log</code> instead.

Methods (by class)

- `act_unite(log)`: Unite activity labels in event log
- `act_unite(grouped_log)`: Unite activity labels of event log

See Also

[eventlog](#), [activity_id](#), [act_recode](#)

Other Activity processing functions: [act_collapse\(\)](#), [act_recode\(\)](#)

add_end_activity	<i>Add Artificial Start/End Activities</i>
------------------	--

Description

Adds an artificial start or end activity to each case with the specified label.

Usage

```

add_end_activity(log, label = "End", eventlog = deprecated())

add_start_activity(log, label = "Start", eventlog = deprecated())

## S3 method for class 'eventlog'
add_end_activity(log, label = "End", eventlog = deprecated())

## S3 method for class 'activitylog'
add_end_activity(log, label = "End", eventlog = deprecated())

## S3 method for class 'grouped_log'
add_end_activity(log, label = "End", eventlog = deprecated())

## S3 method for class 'eventlog'
add_start_activity(log, label = "Start", eventlog = deprecated())

## S3 method for class 'activitylog'
add_start_activity(log, label = "Start", eventlog = deprecated())

## S3 method for class 'grouped_log'
add_start_activity(log, label = "Start", eventlog = deprecated())

```

Arguments

- | | |
|----------|--|
| log | <code>log</code> : Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.). |
| label | <code>character</code> : Start (default "Start") or end (default "End") activity label. This must be an activity label that is not already present in <code>log</code> . |
| eventlog | [Deprecated] ; please use <code>log</code> instead. |

Methods (by class)

- `add_end_activity(eventlog)`: Adds end activity to an `eventlog`.
- `add_end_activity(activitylog)`: Adds end activity to an `activitylog`.
- `add_end_activity(grouped_log)`: Adds end activity to a `grouped_log`.

Functions

- `add_start_activity(eventlog)`: Adds start activity to an `eventlog`.
- `add_start_activity(activitylog)`: Adds start activity to an `activitylog`.
- `add_start_activity(grouped_log)`: Adds start activity to a `grouped_log`.

arrange	<i>Arrange log</i>
---------	--------------------

Description

Arrange log

Usage

```
arrange(.data, ..., .by_group = FALSE)

## S3 method for class 'grouped_eventlog'
arrange(.data, ...)

## S3 method for class 'activitylog'
arrange(.data, ...)
```

Arguments

.data	<code>log</code> : Object of class eventlog or activitylog .
...	Additional arguments passed to dplyr
.by_group	If TRUE, will sort first by grouping variable. Applies to grouped data frames only.

Methods (by class)

- `arrange(grouped_eventlog)`: Arrange an eventlog by group, maintaining all groups
- `arrange(activitylog)`: Arrange an activitylog

<code>as.grouped.data.frame</code>	<i>as.grouped.data.frame</i>
------------------------------------	------------------------------

Description

`as.grouped.data.frame`

Usage

```
as.grouped.data.frame(data, groups)
```

Arguments

data	Data
groups	Names of grouping variables as character vector (e.g. by using dplyr::group_vars)

assign_instance_id *Assign activity instance identifier to events*

Description

Apply heuristics to create an activity instance identifier, so that an eventlog can be made.

Usage

```
assign_instance_id(eventlog, case_id, activity_id, timestamp, lifecycle_id)
```

Arguments

eventlog	data.frame with events
case_id	Case identifier
activity_id	Activity identifier
timestamp	Timestamp
lifecycle_id	Lifecycle identifier

See Also

Other Eventlog construction helpers: [convert_timestamps\(\)](#)

Description

Functionalities for process analysis in R. This package implements an S3-class for event log objects, and related handler functions. Imports related packages for subsetting event data, computation of descriptive statistics, handling of Petri Net objects and visualization of process maps.

`cases`*Cases*

Description

Provides a fine-grained summary of an event log with characteristics for each case: the number of events, the number of activity types, the timespan, the trace, the duration, and the first and last event type.

Usage

```
cases(log, ..., eventlog = deprecated())

## S3 method for class 'log'
cases(log, ..., eventlog = deprecated())

## S3 method for class 'eventlog'
cases(log, ..., eventlog = deprecated())

## S3 method for class 'activitylog'
cases(log, ..., eventlog = deprecated())
```

Arguments

<code>log</code>	<code>log</code> : Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.).
<code>...</code>	Other (optional) arguments passed on to methods. See <code>durations</code> for more options.
<code>eventlog</code>	[Deprecated] ; please use <code>log</code> instead.

Methods (by class)

- `cases(log)`: Construct list of cases in a `log`.
- `cases(eventlog)`: Construct list of cases in an `eventlog`.
- `cases(activitylog)`: Construct list of cases in a `activitylog`.

See Also

`case_list,durations`

case_id	<i>Case classifier</i>
---------	------------------------

Description

Get the case classifier of an object of class eventlog

Usage

```
case_id(x)

## S3 method for class 'eventlog'
case_id(x)

## S3 method for class 'eventlog_mapping'
case_id(x)

## S3 method for class 'activitylog'
case_id(x)

## S3 method for class 'activitylog_mapping'
case_id(x)
```

Arguments

x log: Object of class [eventlog](#) or [activitylog](#), or [mapping](#).

Methods (by class)

- `case_id(eventlog)`: Retrieve case identifier from eventlog
- `case_id(eventlog_mapping)`: Retrieve case identifier from eventlog mapping
- `case_id(activitylog)`: Retrieve case identifier from activitylog
- `case_id(activitylog_mapping)`: Retrieve case identifier from activitylog mapping

See Also

[eventlog](#), [activitylog](#), [mapping](#)

Other Classifiers: [activity_id\(\)](#), [activity_instance_id\(\)](#), [lifecycle_id\(\)](#), [resource_id\(\)](#), [set_activity_id\(\)](#), [set_activity_instance_id\(\)](#), [set_case_id\(\)](#), [set_lifecycle_id\(\)](#), [set_resource_id\(\)](#), [set_timestamp\(\)](#), [timestamp\(\)](#), [timestamps\(\)](#)

case_labels*Case labels***Description**

Retrieve a vector containing all unique case labels

Usage

```
case_labels(log, eventlog = deprecated())

## S3 method for class 'log'
case_labels(log, eventlog = deprecated())
```

Arguments

log	log : Object of class log or derivatives (grouped_log , eventlog , activitylog , etc.).
eventlog	[Deprecated] ; please use log instead.

Methods (by class)

- **case_labels(log)**: Retrieve case labels from log

case_list*Case list***Description**

Construct list of cases

Usage

```
case_list(log, .keep_trace_list, eventlog = deprecated())

## S3 method for class 'eventlog'
case_list(log, .keep_trace_list = FALSE, eventlog = deprecated())

## S3 method for class 'activitylog'
case_list(log, .keep_trace_list = FALSE, eventlog = deprecated())
```

Arguments

- `log` `log`: Object of class `log` or derivatives (`grouped_log`, `eventlog`, `activitylog`, etc.).
- `.keep_trace_list` Logical (default is FALSE): If TRUE, keeps the trace as a list. If FALSE, only the concatenated string representation of the trace is kept.
- `eventlog` **[Deprecated]**; please use `log` instead.

Methods (by class)

- `case_list(eventlog)`: Return case list
- `case_list(activitylog)`: Return case list

`convert_timestamps` *Convert timestamp format*

Description

Function converting the timestamps in the data frame to the appropriate format.

Usage

```
convert_timestamps(x, columns, format)
```

Arguments

- `x` Data.frame containing events or activities.
- `columns` A character vector with one or more names of columns to convert
- `format` The format of the timestamps in the original dataset (either `ymd_hms`, `dmy_hms`, `ymd_hm`, `ymd`, `dmy`, `dmy`, ...). To be provided without quotation marks!

Value

Data.frame with converted timestamps

See Also

Other Eventlog construction helpers: `assign_instance_id()`

count	<i>Count log</i>
-------	------------------

Description

Count log

Usage

```
count(x, ..., wt = NULL, sort = FALSE, name = NULL)

## S3 method for class 'log'
count(x, ...)

## S3 method for class 'grouped_log'
count(x, ...)
```

Arguments

<code>x</code>	<code>log</code> : Object of class eventlog or activitylog .
<code>...</code>	Additional arguments passed to dplyr
<code>wt</code>	< data-masking > Frequency weights. Can be <code>NULL</code> or a variable: <ul style="list-style-type: none"> • If <code>NULL</code> (the default), counts the number of rows in each group. • If a variable, computes <code>sum(wt)</code> for each group.
<code>sort</code>	If <code>TRUE</code> , will show the largest groups at the top.
<code>name</code>	The name of the new column in the output. If omitted, it will default to <code>n</code> . If there's already a column called <code>n</code> , it will use <code>nn</code> . If there's a column called <code>n</code> and <code>nn</code> , it'll use <code>nnn</code> , and so on, adding <code>ns</code> until it gets a new name.

Methods (by class)

- `count(log)`: Count log
- `count(grouped_log)`: Count grouped log

```
detect_resource_inconsistencies
    Detect resource inconsistencies
```

Description

Function to detect inconsistencies in resource information between related events.

Usage

```
detect_resource_inconsistencies(eventlog, filter_condition)
```

Arguments

eventlog	Event log object
filter_condition	Condition that is used to extract a subset of the activity log prior to the application of the function

durations	<i>Durations</i>
-----------	------------------

Description

Computes the throughput times of each case. Throughput time is defined as the interval between the start of the first event and the completion of the last event.

Usage

```
durations(
  log,
  units = c("auto", "secs", "mins", "hours", "days", "weeks"),
  eventlog = deprecated()
)
```

Arguments

log	<code>log</code> : Object of class log or derivatives (grouped_log , eventlog , activitylog , etc.).
units	<code>character</code> (default "auto"): The time unit in which the throughput times should be reported. Should be one of the following values: "auto" (default), "secs", "mins", "hours", "days", "weeks". See also the <code>units</code> argument of difftime .
eventlog	[Deprecated]; please use <code>log</code> instead.

`eventlog`*Eventlog*

Description

A function to instantiate an object of class `eventlog` by specifying a `data.frame` or `tibble` and appropriate case, activity and timestamp classifiers.

Usage

```
eventlog(
  eventlog,
  case_id,
  activity_id,
  activity_instance_id,
  lifecycle_id,
  timestamp,
  resource_id,
  order,
  validate
)
ieventlog(eventlog)
```

Arguments

<code>eventlog</code>	The data object to be used as event log. This can be a <code>data.frame</code> or <code>tibble</code> .
<code>case_id</code>	The case classifier of the event log. A character vector containing variable names of length 1 or more.
<code>activity_id</code>	The activity classifier of the event log. A character vector containing variable names of length 1 or more.
<code>activity_instance_id</code>	The activity instance classifier of the event log.
<code>lifecycle_id</code>	The life cycle classifier of the event log.
<code>timestamp</code>	The timestamp of the event log. Should refer to a Date or POSIXct field.
<code>resource_id</code>	The resource identifier of the event log. A character vector containing variable names of length 1 or more.
<code>order</code>	Configure how to handle sort events with equal timestamps: <code>auto</code> will use the <code>order</code> in the original data, <code>alphabetical</code> will sort the activity labels by alphabet, <code>sorted</code> will assume that the data frame is already correctly sorted and has a column ' <code>.order</code> ', providing a column name will use this column for ordering (can be numeric or character). The latter will never overrule timestamp orderings.
<code>validate</code>	When TRUE some basic checks are run on the contents of the event log such as that activity instances are not connected to more than one case or activity. Using FALSE improves the performance by skipping those checks.

See Also

[case_id](#), [activity_id](#), [activity_instance_id](#), [lifecycle_id](#), [timestamp](#)

Examples

```
## Not run:
data <- data.frame(case = rep("A",5),
activity_id = c("A","B","C","D","E"),
activity_instance_id = 1:5,
lifecycle_id = rep("complete",5),
timestamp = 1:5,
resource = rep("resource 1", 5))
eventlog(data,case_id = "case",
activity_id = "activity_id",
activity_instance_id = "activity_instance_id",
lifecycle_id = "lifecycle_id",
timestamp = "timestamp",
resource_id = "resource")

## End(Not run)
```

events_to_activitylog *Events to activities*

Description

[Deprecated] Create an activity log starting from an event log or regular data.frame. This function is deprecated and replaced by the function [activitylog](#) (for dataframe) and [to_activitylog](#) for eventlogs.

Usage

```
events_to_activitylog(
  eventlog,
  case_id,
  activity_id,
  activity_instance_id,
  lifecycle_id,
  timestamp,
  resource_id,
  ...
)
```

Arguments

- | | |
|-----------------------|---|
| <code>eventlog</code> | The event log to be converted. An object of class <code>eventlog</code> or <code>data.frame</code> |
| <code>case_id</code> | If <code>eventlog</code> is <code>data.frame</code> , the case classifier of the event log. A character vector containing variable names of length 1 or more. |

<code>activity_id</code>	If eventlog is data.frame, the activity classifier of the event log. A character vector containing variable names of length 1 or more.
<code>activity_instance_id</code>	If eventlog is data.frame, the activity instance classifier of the event log.
<code>lifecycle_id</code>	If eventlog is data.frame, the life cycle classifier of the event log.
<code>timestamp</code>	If eventlog is data.frame, the timestamp of the event log. Should refer to a Date or POSIXct field.
<code>resource_id</code>	If eventlog is data.frame, the resource identifier of the event log. A character vector containing variable names of length 1 or more.
<code>...</code>	Additional arguments, i.e. for fixing resource inconsistencies

fill*Fill event log***Description**

Fill event log

Usage

```
fill(data, ..., .direction = c("down", "up", "downup", "updown"))
```

Arguments

<code>data</code>	log: Object of class eventlog or activitylog .
<code>...</code>	Additional arguments passed to tidy
<code>.direction</code>	Direction in which to fill missing values. Currently either "down" (the default), "up", "downup" (i.e. first down and then up) or "updown" (first up and then down).

filter*Filter event log***Description**

Filter event log

Usage

```
filter(.data, ..., .by = NULL, .preserve = FALSE)
```

Arguments

.data	log: Object of class eventlog or activitylog .
...	Additional arguments passed to dplyr
.by	[Experimental]
	< tidy-select > Optionally, a selection of columns to group by for just this operation, functioning as an alternative to group_by() . For details and examples, see ?dplyr_by .
.preserve	Relevant when the .data input is grouped. If .preserve = FALSE (the default), the grouping structure is recalculated based on the resulting data, otherwise the grouping is kept as is.

first_n

first_n

Description

Select first n activity instances.

Usage

```
first_n(log, n, eventlog = deprecated())

## S3 method for class 'eventlog'
first_n(log, n, eventlog = deprecated())

## S3 method for class 'activitylog'
first_n(log, n, eventlog = deprecated())

## S3 method for class 'grouped_log'
first_n(log, n, eventlog = deprecated())
```

Arguments

log	log: Object of class log or derivatives (grouped_log , eventlog , activitylog , etc.).
n	integer : The number of activity instances to select.
eventlog	[Deprecated] ; please use log instead.

Methods (by class)

- `first_n(eventlog)`: Select first n activity instances of an [eventlog](#).
- `first_n(activitylog)`: Select first n activity instances of an [activitylog](#).
- `first_n(grouped_log)`: Select first n activity instances of a [grouped_log](#).

fix_resource_inconsistencies
Fix resource inconsistencies

Description

Fix resource inconsistencies

Usage

```
fix_resource_inconsistencies(
  eventlog,
  filter_condition,
  overwrite_missings,
  detected_problems,
  details
)

## S3 method for class 'activitylog'
fix_resource_inconsistencies(
  eventlog,
  filter_condition = NULL,
  overwrite_missings = FALSE,
  detected_problems = NULL,
  details = TRUE
)

## S3 method for class 'eventlog'
fix_resource_inconsistencies(
  eventlog,
  filter_condition = NULL,
  overwrite_missings = FALSE,
  detected_problems = NULL,
  details = TRUE
)
```

Arguments

<code>eventlog</code>	Event log object
<code>filter_condition</code>	Condition that is used to extract a subset of the activity log prior to the application of the function
<code>overwrite_missings</code>	If events are missing, overwrite the resource if other events within activity instance are performed by single resource. Default FALSE.

detected_problems

If available, the problems detected that need to be fixed. If not available, the function detect_resource_inconsistencies will be called.

details Show details

Methods (by class)

- fix_resource_inconsistencies(activitylog): activitylog Fix activitylog
- fix_resource_inconsistencies(eventlog): eventlog Fix eventlog

grouped_activitylog *Grouped activitylog object*

Description

Lorem ipsum

grouped_eventlog *Grouped eventlog object*

Description

Lorem ipsum

grouped_log *Grouped log object*

Description

Lorem ipsum

group_by*Group event log***Description**

Group event log

Usage

```
group_by(.data, ..., .add = FALSE, .drop = group_by_drop_default(.data))
```

Arguments

- | | |
|-------|--|
| .data | <code>log</code> : Object of class eventlog or activitylog . |
| ... | Variables to group on |
| .add | Add grouping variables to existing ones |
| .drop | Drop groups formed by factor levels that don't appear in the data? The default is TRUE except when <code>.data</code> has been previously grouped with <code>.drop = FALSE</code> . See group_by_drop_default() for details. |

group_by_activity*Group event log on activity id***Description**

Group an event log by activity identifier

Usage

```
group_by_activity(log)
```

Arguments

- | | |
|-----|---|
| log | <code>log</code> : Object of class log or derivatives (grouped_log , eventlog , activitylog , etc.). |
|-----|---|

group_by_activity_instance

Group event log on activity instance id

Description

Group an event log by activity instance identifier

Usage

group_by_activity_instance(log)

Arguments

log log: Object of class [log](#) or derivatives ([grouped_log](#), [eventlog](#), [activitylog](#), etc.).

group_by_case

Group event log on case id

Description

Group an event log by case identifier

Usage

group_by_case(log)

Arguments

log log: Object of class [log](#) or derivatives ([grouped_log](#), [eventlog](#), [activitylog](#), etc.).

`group_by_ids` *Group log on identifiers*

Description

Group log on identifiers

Usage

```
group_by_ids(log, ...)
## S3 method for class 'log'
group_by_ids(log, ...)
```

Arguments

- | | |
|------------------|--|
| <code>log</code> | <code>log</code> : Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.). |
| <code>...</code> | One or more of the following: <code>activity_id</code> , <code>case_id</code> , <code>activity_instance_id</code> , <code>resource_id</code> , <code>lifecycle_id</code> |

Value

Grouped log

Methods (by class)

- `group_by_ids(log)`: Group log on identifiers

`group_by_resource` *Group event log on resource id*

Description

Group an event log by resource identifier

Usage

```
group_by_resource(log)
```

Arguments

- | | |
|------------------|---|
| <code>log</code> | <code>log</code> : Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.). |
|------------------|---|

group_by_resource_activity

Group event log on resource and activity id

Description

Group an event log by resource and activity identifier

Usage

```
group_by_resource_activity(log)
```

Arguments

log	<code>log</code> : Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.).
-----	---

is.log

Test if the Object is a Log

Description

This function returns TRUE if x inherits from the specified class, and FALSE for all other objects.

Usage

```
is.log(x)  
is.eventlog(x)  
is.activitylog(x)  
is.grouped_log(x)  
is.grouped_eventlog(x)  
is.grouped_activitylog(x)
```

Arguments

x	Any R object.
---	---------------

Value

`is.log` returns TRUE if the object inherits from the `log` class, otherwise FALSE.
`is.eventlog` returns TRUE if the object inherits from the `eventlog` class, otherwise FALSE.
`is.activitylog` returns TRUE if the object inherits from the `activitylog` class, otherwise FALSE.
`is.grouped_log` returns TRUE if the object inherits from the `grouped_log` class, otherwise FALSE.
`is.grouped_eventlog` returns TRUE if the object inherits from the `grouped_eventlog` class, otherwise FALSE.
`is.grouped_activitylog` returns TRUE if the object inherits from the `grouped_activitylog` class, otherwise FALSE.

See Also

`log, eventlog, activitylog, grouped_log, grouped_eventlog, grouped_activitylog`

`last_n`

last_n

Description

Select last n activity instances

Usage

```
last_n(log, n, eventlog = deprecated())

## S3 method for class 'eventlog'
last_n(log, n, eventlog = deprecated())

## S3 method for class 'activitylog'
last_n(log, n, eventlog = deprecated())

## S3 method for class 'grouped_log'
last_n(log, n, eventlog = deprecated())
```

Arguments

<code>log</code>	<code>log</code> : Object of class <code>log</code> or derivatives (<code>grouped_log, eventlog, activitylog</code> , etc.).
<code>n</code>	<code>integer</code> : The number of activity instances to select.
<code>eventlog</code>	[Deprecated]; please use <code>log</code> instead.

Methods (by class)

- `last_n(eventlog)`: Select last n activity instances of an `eventlog`.
- `last_n(activitylog)`: Select last n activity instances of an `activitylog`.
- `last_n(grouped_log)`: Select last n activity instances of a `grouped_log`.

`lifecycles`

Life cycles

Description

Returns a `tibble` containing a list of all life cycle types in the log, with their absolute and relative frequency (# events).

Usage

```
lifecycles(log, eventlog = deprecated())  
  
## S3 method for class 'eventlog'  
lifecycles(log, eventlog = deprecated())  
  
## S3 method for class 'grouped_eventlog'  
lifecycles(log, eventlog = deprecated())  
  
## S3 method for class 'activitylog'  
lifecycles(log, eventlog = deprecated())  
  
## S3 method for class 'grouped_activitylog'  
lifecycles(log, eventlog = deprecated())
```

Arguments

log	Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.).
eventlog	[Deprecated] ; please use log instead.

Methods (by class)

- `lifecycles(eventlog)`: Generate lifecycle list for an `eventlog`.
- `lifecycles(grouped_eventlog)`: Generate lifecycle list for a `grouped_eventlog`.
- `lifecycles(activitylog)`: Generate lifecycle list for an `activitylog`.
- `lifecycles(grouped_activitylog)`: Generate lifecycle list for an `grouped_activitylog`.

See Also

[lifecycle_id](#)

lifecycle_id	<i>Life cycle classifier</i>
--------------	------------------------------

Description

Get the life_cycle_id of an object of class eventlog

Usage

```
lifecycle_id(x)

## S3 method for class 'eventlog'
lifecycle_id(x)

## S3 method for class 'eventlog_mapping'
lifecycle_id(x)
```

Arguments

x *eventlog*: Object of class `eventlog`, or `mapping`.

Methods (by class)

- `lifecycle_id(eventlog)`: Retrieve lifecycle identifier from eventlog
- `lifecycle_id(eventlog_mapping)`: Retrieve lifecycle identifier from eventlog mapping

See Also

Other Classifiers: `activity_id()`, `activity_instance_id()`, `case_id()`, `resource_id()`, `set_activity_id()`, `set_activity_instance_id()`, `set_case_id()`, `set_lifecycle_id()`, `set_resource_id()`, `set_timestamp()`, `timestamp()`, `timestamps()`

lifecycle_labels	<i>Get vector of lifecycle labels.</i>
------------------	--

Description

Retrieve a vector containing all unique lifecycle labels.

Usage

```
lifecycle_labels(log, eventlog = deprecated())

## S3 method for class 'eventlog'
lifecycle_labels(log, eventlog = deprecated())

## S3 method for class 'activitylog'
lifecycle_labels(log, eventlog = deprecated())
```

Arguments

log	<code>log</code> : Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.).
eventlog	[Deprecated] ; please use log instead.

Methods (by class)

- `lifecycle_labels(eventlog)`: Retrieve lifecycle labels from an `eventlog`.
- `lifecycle_labels(activitylog)`: Retrieve lifecycle labels from an `activitylog`.

See Also

[lifecycle_id](#)

log	<i>Log object</i>
-----	-------------------

Description

 Lorem ipsum

mapping	<i>Mapping</i>
---------	----------------

Description

 Prints the mapping of an event log object.

Usage

```
mapping(log, eventlog = deprecated())  
  
## S3 method for class 'eventlog'  
mapping(log, eventlog = deprecated())  
  
## S3 method for class 'activitylog'  
mapping(log, eventlog = deprecated())
```

Arguments

log	<code>log</code> : Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.).
eventlog	[Deprecated] ; please use log instead.

Methods (by class)

- `mapping(eventlog)`: Retrieve identifier mapping from eventlog
- `mapping(activitylog)`: Retrieve identifier mapping from activitylog

mutate*Mutate event log***Description**

Mutate event log

Usage

```
mutate(.data, ...)
```

Arguments

- | | |
|--------------------|--|
| <code>.data</code> | A data frame, data frame extension (e.g. a tibble), or a lazy data frame (e.g. from dbplyr or dtplyr). See <i>Methods</i> , below, for more details. |
| <code>...</code> | Additional arguments passed to <code>dplyr</code> |

n_activities*n_activities***Description**

Returns the number of activities in an event log

Usage

```
n_activities(log, eventlog = deprecated())

## S3 method for class 'log'
n_activities(log, eventlog = deprecated())

## S3 method for class 'grouped_log'
n_activities(log, eventlog = deprecated())
```

Arguments

- | | |
|-----------------------|---|
| <code>log</code> | <code>log</code> : Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.). |
| <code>eventlog</code> | [Deprecated] ; please use <code>log</code> instead. |

Methods (by class)

- `n_activities(log)`: Count the number of activities in a log
- `n_activities(grouped_log)`: Count the number of activities for a grouped log

See Also

Other Counters: `n_activity_instances()`, `n_cases()`, `n_events()`, `n_resources()`, `n_traces()`

`n_activity_instances` *n_activity_instances*

Description

Returns the number of activity instances in an event log

Usage

```
n_activity_instances(log, eventlog = deprecated())

## S3 method for class 'eventlog'
n_activity_instances(log, eventlog = deprecated())

## S3 method for class 'grouped_eventlog'
n_activity_instances(log, eventlog = deprecated())

## S3 method for class 'activitylog'
n_activity_instances(log, eventlog = deprecated())

## S3 method for class 'grouped_activitylog'
n_activity_instances(log, eventlog = deprecated())
```

Arguments

`log` `log`: Object of class `log` or derivatives (`grouped_log`, `eventlog`, `activitylog`, etc.).
`eventlog` **[Deprecated]**; please use `log` instead.

Methods (by class)

- `n_activity_instances(eventlog)`: eventlog
- `n_activity_instances(grouped_eventlog)`: grouped_eventlog
- `n_activity_instances(activitylog)`: eventlog
- `n_activity_instances(grouped_activitylog)`: grouped_activitylog

See Also

Other Counters: `n_activities()`, `n_cases()`, `n_events()`, `n_resources()`, `n_traces()`

<code>n_cases</code>	<i>n_cases</i>
----------------------	----------------

Description

Returns the number of cases in an event log.

Usage

```
n_cases(log, eventlog = deprecated())

## S3 method for class 'log'
n_cases(log, eventlog = deprecated())

## S3 method for class 'grouped_log'
n_cases(log, eventlog = deprecated())
```

Arguments

<code>log</code>	<code>log</code> : Object of class log or derivatives (grouped_log , eventlog , activitylog , etc.).
<code>eventlog</code>	[Deprecated] ; please use <code>log</code> instead.

Methods (by class)

- `n_cases(log)`: Count number of cases in a [log](#).
- `n_cases(grouped_log)`: Count number of cases in a [grouped_log](#).

See Also

Other Counters: [n_activities\(\)](#), [n_activity_instances\(\)](#), [n_events\(\)](#), [n_resources\(\)](#), [n_traces\(\)](#)

<code>n_events</code>	<i>n_events</i>
-----------------------	-----------------

Description

Returns the number of events in an event log.

Usage

```
n_events(log, eventlog = deprecated())

## S3 method for class 'eventlog'
n_events(log, eventlog = deprecated())

## S3 method for class 'grouped_eventlog'
n_events(log, eventlog = deprecated())

## S3 method for class 'activitylog'
n_events(log, eventlog = deprecated())

## S3 method for class 'grouped_activitylog'
n_events(log, eventlog = deprecated())
```

Arguments

- log** `log`: Object of class `log` or derivatives (`grouped_log`, `eventlog`, `activitylog`, etc.).
eventlog **[Deprecated]**; please use `log` instead.

Methods (by class)

- `n_events(eventlog)`: Count number of events in an `eventlog`.
- `n_events(grouped_eventlog)`: Count number of events in a `grouped_eventlog`.
- `n_events(activitylog)`: Count number of events in an `activitylog`.
- `n_events(grouped_activitylog)`: Count number of events in an `grouped_activitylog`.

See Also

Other Counters: `n_activities()`, `n_activity_instances()`, `n_cases()`, `n_resources()`, `n_traces()`

n_resources

n_resources

Description

Returns the number of resources in an event log

Usage

```
n_resources(log, eventlog = deprecated())

## S3 method for class 'log'
n_resources(log, eventlog = deprecated())

## S3 method for class 'grouped_log'
n_resources(log, eventlog = deprecated())
```

Arguments

- `log` `log`: Object of class `log` or derivatives (`grouped_log`, `eventlog`, `activitylog`, etc.).
`eventlog` **[Deprecated]**; please use `log` instead.

Methods (by class)

- `n_resources(log)`: Count number of resources in log
- `n_resources(grouped_log)`: Count number of resources in grouped log

See Also

Other Counters: `n_activities()`, `n_activity_instances()`, `n_cases()`, `n_events()`, `n_traces()`

`n_traces`*n_traces***Description**

Returns the number of traces in an event log

Usage

```
n_traces(log, eventlog = deprecated())

## S3 method for class 'log'
n_traces(log, eventlog = deprecated())

## S3 method for class 'grouped_log'
n_traces(log, eventlog = deprecated())
```

Arguments

- `log` `log`: Object of class `log` or derivatives (`grouped_log`, `eventlog`, `activitylog`, etc.).
`eventlog` **[Deprecated]**; please use `log` instead.

Methods (by class)

- `n_traces(log)`: Count number of traces for eventlog
- `n_traces(grouped_log)`: Count number of traces for grouped eventlog

See Also

Other Counters: `n_activities()`, `n_activity_instances()`, `n_cases()`, `n_events()`, `n_resources()`

```
print.eventlog_mapping
```

Generic print function for mapping.

Description

Generic print function for mapping.

Usage

```
## S3 method for class 'eventlog_mapping'  
print(x, ...)
```

Arguments

x	Mapping of <code>eventlog</code> or <code>activitylog</code>
...	Additional Arguments

```
print.log
```

Generic print function for eventlog

Description

Generic print function for eventlog

Usage

```
## S3 method for class 'log'  
print(x, ...)
```

Arguments

x	log: Object of class <code>eventlog</code> or <code>activitylog</code> .
...	Additional Arguments

rename	<i>Rename log</i>
--------	-------------------

Description

Rename log

Usage

```
rename(.data, ...)

## S3 method for class 'log'
rename(.data, ...)

## S3 method for class 'grouped_log'
rename(.data, ...)
```

Arguments

.data	<code>log</code> : Object of class eventlog or activitylog .
...	Variables to rename. Use "new_name" = "old_name" to rename selected variables.

Methods (by class)

- `rename(log)`: Rename log
- `rename(grouped_log)`: Rename grouped log

resources	<i>Resources</i>
-----------	------------------

Description

Returns a tibble containing a list of all resources in the event log, with there absolute and relative frequency

Usage

```
resources(log, eventlog = deprecated())

## S3 method for class 'eventlog'
resources(log, eventlog = deprecated())

## S3 method for class 'activitylog'
resources(log, eventlog = deprecated())

## S3 method for class 'grouped_log'
resources(log, eventlog = deprecated())
```

Arguments

- log `log`: Object of class `log` or derivatives (`grouped_log`, `eventlog`, `activitylog`, etc.).
eventlog [Deprecated]; please use log instead.

Methods (by class)

- `resources(eventlog)`: Generate resource list for eventlog
- `resources(activitylog)`: Generate resource list for activitylog
- `resources(grouped_log)`: Compute activity frequencies

See Also

`resource_id`, `eventlog`

resource_id *Resource classifier*

Description

Get the resource classifier of an object of class `eventlog`.

Usage

```
resource_id(x)

## S3 method for class 'eventlog'
resource_id(x)

## S3 method for class 'eventlog_mapping'
resource_id(x)

## S3 method for class 'activitylog'
resource_id(x)

## S3 method for class 'activitylog_mapping'
resource_id(x)
```

Arguments

- x `log`: Object of class `eventlog` or `activitylog`, or `mapping`.

Methods (by class)

- `resource_id(eventlog)`: Retrieve resource identifier from eventlog
- `resource_id(eventlog_mapping)`: Retrieve resource identifier from eventlog mapping
- `resource_id(activitylog)`: Retrieve resource identifier from activitylog
- `resource_id(activitylog_mapping)`: Retrieve resource identifier from activitylog mapping

See Also

[eventlog, mapping](#)

Other Classifiers: [activity_id\(\)](#), [activity_instance_id\(\)](#), [case_id\(\)](#), [lifecycle_id\(\)](#), [set_activity_id\(\)](#), [set_activity_instance_id\(\)](#), [set_case_id\(\)](#), [set_lifecycle_id\(\)](#), [set_resource_id\(\)](#), [set_timestamp\(\)](#), [timestamp\(\)](#), [timestamps\(\)](#)

`resource_labels` *Get vector of resource labels*

Description

Retrieve a vector containing all unique resource labels

Usage

```
resource_labels(log, eventlog = deprecated())

## Default S3 method:
resource_labels(log, eventlog = deprecated())
```

Arguments

<code>log</code>	<code>log</code> : Object of class <code>log</code> or derivatives (grouped_log , eventlog , activitylog , etc.).
<code>eventlog</code>	[Deprecated] ; please use <code>log</code> instead.

Methods (by class)

- `resource_labels(default)`: Retrieve resource labels from eventlog

re_map*Re map*

Description

Construct an eventlog using an existing mapping.

Usage

```
re_map(x, mapping)
```

Arguments

x	<code>log</code> : Object of class <code>eventlog</code> or <code>activitylog</code> .
mapping	An existing mapping created by the mapping function

sample_n

Sample function for eventlog

Description

Sample function for eventlog

Usage

```
sample_n(tbl, size, replace = FALSE, weight = NULL, .env = NULL, ...)
## S3 method for class 'eventlog'
sample_n(tbl, size, replace = FALSE, weight = NULL, .env = NULL, ...)
## S3 method for class 'grouped_eventlog'
sample_n(tbl, size, replace = FALSE, weight = NULL, .env = NULL, ...)
```

Arguments

tbl	Deprecated; please use log instead.
size	<code>integer</code> : Number of cases to sample
replace	<code>logical</code> (default FALSE): Sample with replacement TRUE or without FALSE.
weight	Sampling weights. This must evaluate to a vector of non-negative numbers the same length as the input. Weights are automatically standardised to sum to 1.
.env	Deprecated; please don't use.
...	ignored

Methods (by class)

- `sample_n(eventlog)`: Sample n cases of eventlog
- `sample_n(grouped_eventlog)`: Stratified sampling of a grouped eventlog: sample n cases within each group

See Also

[slice_sample](#)

`scale_fill_discrete_bupaR`
bupaR color scales

Description

bupaR color scales

Usage

```
scale_fill_discrete_bupaR(
  guide = "legend",
  na.value = "grey50",
  name = waiver()
)

scale_color_discrete_bupaR(
  guide = "legend",
  na.value = "grey50",
  name = waiver()
)

scale_fill_continuous_bupaR(
  guide = "colourbar",
  na.value = "grey50",
  name = waiver(),
  palette = c("green", "orange")
)

scale_color_continuous_bupaR(
  guide = "colourbar",
  na.value = "grey50",
  name = waiver()
)

scale_fill_gradient_bupaR(
  guide = "colourbar",
```

```

na.value = "grey50",
name = waiver()
)

scale_color_gradient_bupaR(
  guide = "colourbar",
  na.value = "grey50",
  name = waiver()
)

scale_fill_gradient2_bupaR(
  guide = "colourbar",
  na.value = "grey50",
  name = waiver(),
  midpoint = 0
)

scale_color_gradient2_bupaR(
  guide = "colourbar",
  na.value = "grey50",
  name = waiver(),
  midpoint = 0
)
)

```

Arguments

guide	Type of legend. Use "colourbar" for continuous colour bar, or "legend" for discrete colour legend.
na.value	Colour to use for missing values
name	The name of the scale. Used as the axis or legend title. If waiver(), the default, the name of the scale is taken from the first mapping used for that aesthetic. If NULL, the legend title will be omitted.
palette	Color palette to be used for scale_.continuous_bupaR. Can be "green" (default) or "orange".
midpoint	The midpoint (in data value) of the diverging scale. Defaults to 0.

select_ids

Select identifiers from log

Description

Select identifiers from log

Usage

```
select_ids(log, ...)

## S3 method for class 'log'
select_ids(log, ...)
```

Arguments

<code>log</code>	<code>log</code> : Object of class <code>log</code> , <code>eventlog</code> , or <code>activitylog</code> .
<code>...</code>	One or more of the following: <code>activity_id</code> , <code>case_id</code> , <code>activity_instance_id</code> , <code>resource_id</code> , <code>lifecycle_id</code>

Methods (by class)

- `select_ids(log)`: Select identifiers from log

Examples

```
library(eventdataR)

patients %>% select_ids(activity_id, case_id)
```

`set_activity_id` *Set activity id of log*

Description

Set activity id of log

Usage

```
set_activity_id(log, activity_id, eventlog = deprecated())

## Default S3 method:
set_activity_id(log, activity_id, eventlog = deprecated())
```

Arguments

<code>log</code>	<code>log</code> : Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.).
<code>activity_id</code>	New activity id
<code>eventlog</code>	[Deprecated] : please use <code>log</code> instead.

Methods (by class)

- `set_activity_id(default)`: Set activity id

See Also

Other Classifiers: [activity_id\(\)](#), [activity_instance_id\(\)](#), [case_id\(\)](#), [lifecycle_id\(\)](#), [resource_id\(\)](#), [set_activity_id\(\)](#), [set_case_id\(\)](#), [set_lifecycle_id\(\)](#), [set_resource_id\(\)](#), [set_timestamp\(\)](#), [timestamp\(\)](#), [timestamps\(\)](#)

`set_activity_instance_id`

Set activity instance id of log

Description

Set activity instance id of log

Usage

```
set_activity_instance_id(log, activity_instance_id, eventlog = deprecated())  
  
## S3 method for class 'eventlog'  
set_activity_instance_id(log, activity_instance_id, eventlog = deprecated())
```

Arguments

`log` `log`: Object of class [log](#) or derivatives ([grouped_log](#), [eventlog](#), [activitylog](#), etc.).
`activity_instance_id`
 New `activity_instance_id`
`eventlog` **[Deprecated]**; please use `log` instead.

Methods (by class)

- `set_activity_instance_id(eventlog)`: Set `activity_instance_id` of `eventlog`

See Also

Other Classifiers: [activity_id\(\)](#), [activity_instance_id\(\)](#), [case_id\(\)](#), [lifecycle_id\(\)](#), [resource_id\(\)](#), [set_activity_id\(\)](#), [set_case_id\(\)](#), [set_lifecycle_id\(\)](#), [set_resource_id\(\)](#), [set_timestamp\(\)](#), [timestamp\(\)](#), [timestamps\(\)](#)

set_case_id	<i>Set case id of log</i>
-------------	---------------------------

Description

Set case id of log

Usage

```
set_case_id(log, case_id, eventlog = deprecated())
## Default S3 method:
set_case_id(log, case_id, eventlog = deprecated())
```

Arguments

log	<i>log</i> : Object of class log or derivatives (grouped_log , eventlog , activitylog , etc.).
case_id	New case id
eventlog	[Deprecated] ; please use log instead.

Methods (by class)

- `set_case_id(default)`: Set case id

See Also

Other Classifiers: [activity_id\(\)](#), [activity_instance_id\(\)](#), [case_id\(\)](#), [lifecycle_id\(\)](#), [resource_id\(\)](#), [set_activity_id\(\)](#), [set_activity_instance_id\(\)](#), [set_lifecycle_id\(\)](#), [set_resource_id\(\)](#), [set_timestamp\(\)](#), [timestamp\(\)](#), [timestamps\(\)](#)

set_lifecycle_id	<i>Set lifecycle id of log</i>
------------------	--------------------------------

Description

Set lifecycle id of log

Usage

```
set_lifecycle_id(log, lifecycle_id, eventlog = deprecated())
## Default S3 method:
set_lifecycle_id(log, lifecycle_id, eventlog = deprecated())
```

Arguments

log	log: Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.).
lifecycle_id	New lifecycle id. Can be multiple in case of activitylog
eventlog	[Deprecated] : please use log instead.

Methods (by class)

- `set_lifecycle_id(default)`: Set lifecycle id

See Also

Other Classifiers: `activity_id()`, `activity_instance_id()`, `case_id()`, `lifecycle_id()`, `resource_id()`, `set_activity_id()`, `set_activity_instance_id()`, `set_case_id()`, `set_resource_id()`, `set_timestamp()`, `timestamp()`, `timestamps()`

`set_resource_id` *Set resource id of log*

Description

Set resource id of log

Usage

```
set_resource_id(log, resource_id, eventlog = deprecated())

## Default S3 method:
set_resource_id(log, resource_id, eventlog = deprecated())
```

Arguments

log	log: Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.).
resource_id	New resource id
eventlog	[Deprecated] : please use log instead.

Methods (by class)

- `set_resource_id(default)`: Set resource id

See Also

Other Classifiers: `activity_id()`, `activity_instance_id()`, `case_id()`, `lifecycle_id()`, `resource_id()`, `set_activity_id()`, `set_activity_instance_id()`, `set_case_id()`, `set_lifecycle_id()`, `set_timestamp()`, `timestamp()`, `timestamps()`

set_timestamp	<i>Set timestamp of eventlog</i>
---------------	----------------------------------

Description

Set timestamp of eventlog

Usage

```
set_timestamp(log, timestamp, eventlog = deprecated())

## S3 method for class 'eventlog'
set_timestamp(log, timestamp, eventlog = deprecated())
```

Arguments

log	log: Object of class log or derivatives (grouped_log , eventlog , activitylog , etc.).
timestamp	New timestamp
eventlog	[Deprecated]; please use log instead.

Methods (by class)

- `set_timestamp(eventlog)`: Set timestamp of eventlog

See Also

Other Classifiers: [activity_id\(\)](#), [activity_instance_id\(\)](#), [case_id\(\)](#), [lifecycle_id\(\)](#), [resource_id\(\)](#), [set_activity_id\(\)](#), [set_activity_instance_id\(\)](#), [set_case_id\(\)](#), [set_lifecycle_id\(\)](#), [set_resource_id\(\)](#), [timestamp\(\)](#), [timestamps\(\)](#)

simple_eventlog	<i>Simple Eventlog</i>
-----------------	------------------------

Description

[Superseded]

A function to instantiate an object of class `eventlog` by specifying a `data.frame` or `tibble` and the minimally required case identifier, activity identifier and timestamp.

This function is superseded by the introduction of the `activitylog` format. Eventlogs in this 'simple' format can be seen as log of activities, and be created with `activitylog()`. If required, the resulting activity log can be transformed back to the `eventlog` format using `to_eventlog`.

Usage

```
simple_eventlog(
  eventlog,
  case_id = NULL,
  activity_id = NULL,
  timestamp = NULL,
  resource_id = NULL,
  order = "auto",
  return_type = c("eventlog", "activitylog")
)

isimple_eventlog(eventlog)
```

Arguments

<code>eventlog</code>	The data object to be used as event log. This can be a <code>data.frame</code> or <code>tibble</code> .
<code>case_id</code>	The case classifier of the event log.
<code>activity_id</code>	The activity classifier of the event log.
<code>timestamp</code>	The timestamp of the event log.
<code>resource_id</code>	The resource classifier of the event log (optional).
<code>order</code>	Configure how to handle sort events with equal timestamps: <code>auto</code> will use the order in the original data, <code>alphabetical</code> will sort the activity labels by alphabet, <code>sorted</code> will assume that the data frame is already correctly sorted and has a column <code>'.order'</code> , providing a column name will use this column for ordering (can be numeric or character). The latter will never overrule timestamp orderings.
<code>return_type</code>	Whether to return <code>eventlog</code> (default) or <code>activitylog</code> object.

See Also

[eventlog](#), [case_id](#), [activity_id](#), [activity_instance_id](#), [lifecycle_id](#), [timestamp](#)

Examples

```
## Not run:
data <- data.frame(case = rep("A",5),
activity_id = c("A","B","C","D","E"),
timestamp = date_decimal(1:5))
simple_eventlog(data,case_id = "case",
activity_id = "activity_id",
timestamp = "timestamp")

## End(Not run)
```

slice	<i>Slice function for event log</i>
-------	-------------------------------------

Description

Slice function for event log

Usage

```
slice(.data, ..., .by = NULL, .preserve = FALSE)

## S3 method for class 'log'
slice(.data, ...)

## S3 method for class 'grouped_log'
slice(.data, ...)

## S3 method for class 'eventlog'
slice_activities(.data, ...)

## S3 method for class 'activitylog'
slice_activities(.data, ...)

## S3 method for class 'grouped_log'
slice_activities(.data, ...)

## S3 method for class 'eventlog'
slice_events(.data, ...)

## S3 method for class 'grouped_eventlog'
slice_events(.data, ...)
```

Arguments

.data	A data frame, data frame extension (e.g. a tibble), or a lazy data frame (e.g. from dbplyr or dtplyr). See <i>Methods</i> , below, for more details.
...	Additional arguments passed to dplyr
.by	[Experimental] A selection of columns to group by for just this operation, functioning as an alternative to group_by() . For details and examples, see ?dplyr_by .
.preserve	Relevant when the .data input is grouped. If .preserve = FALSE (the default), the grouping structure is recalculated based on the resulting data, otherwise the grouping is kept as is.

Methods (by class)

- `slice(log)`: Slice n cases of a log
- `slice(grouped_log)`: Slice grouped log: take slice of cases from each group.

Functions

- `slice_activities(eventlog)`: Take a slice of activity instances from event log
- `slice_activities(activitylog)`: Take a slice of activity instances from activity log
- `slice_activities(grouped_log)`: Take a slice of activity instances from grouped event log
- `slice_events(eventlog)`: Take a slice of events from event log
- `slice_events(grouped_eventlog)`: Take a slice of events from grouped event log

`slice_activities` *Slice Activities*

Description

Take a slice of activity instances from event log

Usage

`slice_activities(.data, ...)`

Arguments

- | | |
|-------|--|
| .data | <code>log</code> : Object of class eventlog or activitylog . |
| ... | Slice index |

`slice_events` *Slice Events*

Description

Take a slice of events from event log

Usage

`slice_events(.data, ...)`

Arguments

- | | |
|-------|--|
| .data | <code>log</code> : Object of class eventlog or activitylog |
| ... | Slice index |

<code>slice_sample</code>	<i>Sample function for logs</i>
---------------------------	---------------------------------

Description

Sample function for logs

Usage

```
slice_sample(.data, ..., n, prop, by = NULL, weight_by = NULL, replace = FALSE)

## S3 method for class 'log'
slice_sample(.data, ..., n, prop, weight_by = NULL, replace = FALSE)

## S3 method for class 'grouped_log'
slice_sample(.data, ..., n, prop, weight_by = NULL, replace = FALSE)
```

Arguments

.data	A data frame, data frame extension (e.g. a tibble), or a lazy data frame (e.g. from dbplyr or dtplyr). See <i>Methods</i> , below, for more details.
...	Arguments passed on to <code>dplyr::slice_sample</code>
n, prop	Provide either n, the number of rows, or prop, the proportion of rows to select. If neither are supplied, n = 1 will be used. If n is greater than the number of rows in the group (or prop > 1), the result will be silently truncated to the group size. prop will be rounded towards zero to generate an integer number of rows. A negative value of n or prop will be subtracted from the group size. For example, n = -2 with a group of 5 rows will select 5 - 2 = 3 rows; prop = -0.25 with 8 rows will select 8 * (1 - 0.25) = 6 rows.
n, prop	Provide either n, the number of rows, or prop, the proportion of rows to select. If neither are supplied, n = 1 will be used. If n is greater than the number of rows in the group (or prop > 1), the result will be silently truncated to the group size. prop will be rounded towards zero to generate an integer number of rows. A negative value of n or prop will be subtracted from the group size. For example, n = -2 with a group of 5 rows will select 5 - 2 = 3 rows; prop = -0.25 with 8 rows will select 8 * (1 - 0.25) = 6 rows.
by	[Experimental] <code><tidy-select></code> Optionally, a selection of columns to group by for just this operation, functioning as an alternative to <code>group_by()</code> . For details and examples, see <code>?dplyr_by</code> .
weight_by	<code><data-masking></code> Sampling weights. This must evaluate to a vector of non-negative numbers the same length as the input. Weights are automatically standardised to sum to 1.
replace	Should sampling be performed with (TRUE) or without (FALSE, the default) replacement.

Methods (by class)

- slice_sample(log): Sample n cases of a [log](#).
- slice_sample(grouped_log): Sample n cases from a [grouped_log](#).

standardize_lifecycle *Standardize format of lifecycle types*

Description

Standardize format of lifecycle types

Usage

```
standardize_lifecycle(eventlog)

## S3 method for class 'eventlog'
standardize_lifecycle(eventlog)
```

Arguments

eventlog The event log to be converted. An object of class `eventlog`.

Methods (by class)

- standardize_lifecycle(eventlog): Standardize lifecycle types for `eventlog`

summarize *Summarize event log*

Description

Summarize event log

Usage

```
summarise(.data, ..., .by = NULL, .groups = NULL)
```

Arguments

<code>.data</code>	<code>log</code> : Object of class eventlog or activitylog
<code>...</code>	Name-value pairs of summary functions
<code>.by</code>	[Experimental]
	< tidy-select > Optionally, a selection of columns to group by for just this operation, functioning as an alternative to group_by() . For details and examples, see ?dplyr_by .
<code>.groups</code>	[Experimental] Grouping structure of the result.
	<ul style="list-style-type: none"> • "drop_last": dropping the last level of grouping. This was the only supported option before version 1.0.0. • "drop": All levels of grouping are dropped. • "keep": Same grouping structure as <code>.data</code>. • "rowwise": Each row is its own group.

When `.groups` is not specified, it is chosen based on the number of rows of the results:

- If all the results have 1 row, you get "drop_last".
- If the number of rows varies, you get "keep" (note that returning a variable number of rows was deprecated in favor of [reframe\(\)](#), which also unconditionally drops all levels of grouping).

In addition, a message informs you of that choice, unless the result is ungrouped, the option "dplyr.summarise.inform" is set to FALSE, or when `summarise()` is called from a function in a package.

Value

The summarize function returns a tibble, no event log. All groups will be removed.

`summary.eventlog` *Generic summary function for eventlog class*

Description

Generic summary function for eventlog class

Usage

```
## S3 method for class 'eventlog'
summary(object, ...)

## S3 method for class 'grouped_eventlog'
summary(object, ...)
```

Arguments

- | | |
|--------|--|
| object | log: Object of class eventlog or activitylog |
| ... | Ignored. |

Methods (by class)

- `summary(grouped_eventlog)`: Summary of grouped event log

<code>timestamp</code>	<i>Timestamp classifier</i>
------------------------	-----------------------------

Description

Get the timestamp classifier of an object of class `eventlog`

Usage

```
timestamp(x)

## S3 method for class 'eventlog'
timestamp(x)

## S3 method for class 'eventlog_mapping'
timestamp(x)

## S3 method for class 'activitylog'
timestamp(x)

## S3 method for class 'activitylog_mapping'
timestamp(x)
```

Arguments

- | | |
|---|--|
| x | Object of class <code>eventlog</code> , or mapping . |
|---|--|

Methods (by class)

- `timestamp(eventlog)`: Retrieve timestamp identifier from `eventlog`
- `timestamp(eventlog_mapping)`: Retrieve timestamp identifier from `eventlog_mapping`
- `timestamp(activitylog)`: Retrieve timestamp identifier from `activitylog`
- `timestamp(activitylog_mapping)`: Retrieve timestamp identifier from `activitylog_mapping`

See Also

[eventlog](#), [mapping](#)

Other Classifiers: [activity_id\(\)](#), [activity_instance_id\(\)](#), [case_id\(\)](#), [lifecycle_id\(\)](#), [resource_id\(\)](#), [set_activity_id\(\)](#), [set_activity_instance_id\(\)](#), [set_case_id\(\)](#), [set_lifecycle_id\(\)](#), [set_resource_id\(\)](#), [set_timestamp\(\)](#), [timestamps\(\)](#)

[timestamps](#)

Timestamp classifiers

Description

Get the timestamps classifier of an object of class [activitylog](#)

Usage

```
timestamps(x)

## S3 method for class 'eventlog'
timestamps(x)

## S3 method for class 'eventlog_mapping'
timestamps(x)

## S3 method for class 'activitylog'
timestamps(x)

## S3 method for class 'activitylog_mapping'
timestamps(x)
```

Arguments

x Object of class [activitylog](#), or [mapping](#).

Methods (by class)

- `timestamps(eventlog)`: Retrieve timestamp identifier from eventlog
- `timestamps(eventlog_mapping)`: Retrieve timestamp identifier from eventlog mapping
- `timestamps(activitylog)`: Retrieve timestamp identifier from activitylog
- `timestamps(activitylog_mapping)`: Retrieve timestamp identifier from activitylog mapping

See Also

Other Classifiers: [activity_id\(\)](#), [activity_instance_id\(\)](#), [case_id\(\)](#), [lifecycle_id\(\)](#), [resource_id\(\)](#), [set_activity_id\(\)](#), [set_activity_instance_id\(\)](#), [set_case_id\(\)](#), [set_lifecycle_id\(\)](#), [set_resource_id\(\)](#), [set_timestamp\(\)](#), [timestamps\(\)](#)

to_activitylog	<i>Convert eventlog object to activitylog object.</i>
----------------	---

Description

Convert eventlog object to activitylog object.

Usage

```
to_activitylog(eventlog)
```

Arguments

eventlog	Object of class <code>eventlog</code>
----------	---------------------------------------

to_eventlog	<i>Convert activitylog to eventlog</i>
-------------	--

Description

Convert activitylog to eventlog

Usage

```
to_eventlog(activitylog)

## S3 method for class 'activitylog'
to_eventlog(activitylog)

## S3 method for class 'grouped_activitylog'
to_eventlog(activitylog)
```

Arguments

activitylog	Object of class <code>activitylog</code>
-------------	--

Methods (by class)

- `to_eventlog(activitylog)`: Convert activitylog to eventlog
- `to_eventlog(grouped_activitylog)`: Convert grouped activitylog to grouped eventlog

traces*Traces***Description**

`traces` computes the different activity sequences of an event log together with their absolute and relative frequencies. Activity sequences are based on the start timestamp of activities.

Usage

```
traces(log, ..., eventlog = deprecated())

## S3 method for class 'log'
traces(log, ..., eventlog = deprecated())

## S3 method for class 'grouped_log'
traces(log, ..., eventlog = deprecated())
```

Arguments

<code>log</code>	<code>log</code> : Object of class <code>log</code> or derivatives (<code>grouped_log</code> , <code>eventlog</code> , <code>activitylog</code> , etc.).
<code>...</code>	Deprecated arguments
<code>eventlog</code>	[Deprecated] ; please use <code>log</code> instead.

Methods (by class)

- `traces(log)`: Construct traces list for eventlog
- `traces(grouped_log)`: Construct list of traces for grouped log

See Also

[cases](#), [eventlog](#)

trace_list*Trace list***Description**

Construct trace list

Usage

```
trace_list(log, ..., eventlog = deprecated())  
  
## S3 method for class 'eventlog'  
trace_list(log, ..., eventlog = deprecated())  
  
## S3 method for class 'activitylog'  
trace_list(log, ..., eventlog = deprecated())  
  
## S3 method for class 'grouped_log'  
trace_list(log, ..., eventlog = deprecated())
```

Arguments

log	Object of class log or derivatives (grouped_log , eventlog , activitylog , etc.).
...	Other arguments. Currently not used.
eventlog	[Deprecated]; please use log instead.

Methods (by class)

- `trace_list(eventlog)`: Construct trace list for event log
- `trace_list(activitylog)`: Construct trace list for activity log
- `trace_list(grouped_log)`: Construct list of traces for grouped log

ungroup*Ungroup log*

Description

Ungroup log

Usage

```
ungroup(x, ...)  
  
## S3 method for class 'activitylog'  
ungroup(x, ...)
```

Arguments

x	Activitylog
...	variables to remove from grouping

Methods (by class)

- `ungroup(activitylog)`: Ungroup columns in eventlog

`ungroup_eventlog` *Ungroup event log*

Description

Remove groups from event log

Usage

```
ungroup_eventlog(log)

## S3 method for class 'eventlog'
ungroup_eventlog(log)

## S3 method for class 'grouped_log'
ungroup_eventlog(log)
```

Arguments

log	Eventlog
-----	----------

Methods (by class)

- `ungroup_eventlog(eventlog)`: Remove groups from event log
- `ungroup_eventlog(grouped_log)`: Remove groups from [log](#).

`unite` *Unite multiple columns into one.*

Description

Unite multiple columns into one.

Usage

```
unite(data, col, ..., sep = "_", remove = TRUE, na.rm = FALSE)

## S3 method for class 'eventlog'
unite(data, col, ..., sep = "_", remove = T)

## S3 method for class 'activitylog'
unite(data, col, ..., sep = "_", remove = T)

## S3 method for class 'grouped_eventlog'
unite(data, col, ..., sep = "_", remove = T)
```

Arguments

data	Eventlog
col	The name of the new column, as a string or symbol. This argument is passed by expression and supports quasiquotation (you can unquote strings and symbols). The name is captured from the expression with rlang::ensym() (note that this kind of interface where symbols do not represent actual objects is now discouraged in the tidyverse; we support it here for backward compatibility).
...	Additional arguments passed to tidy
sep	Separator to use between values.
remove	If TRUE, remove input columns from output data frame.
na.rm	If TRUE, missing values will be removed prior to uniting each value.

Methods (by class)

- `unite(eventlog)`: Unite columns in eventlog
- `unite(activitylog)`: Unite columns in activitylog
- `unite(grouped_eventlog)`: Unite columns in grouped eventlog
