

# Package ‘c2z’

August 10, 2023

**Type** Package

**Title** A Reference Manager

**Version** 0.2.0

**Maintainer** Øystein Olav Skaar <oeysan@gmail.com>

**Description** 'Cristin' to 'Zotero' ('c2z') aims at obtaining total dominion over 'Cristin' ('Current Research Information SysTem in Norway') and 'Zotero'. The package enables manipulating 'Zotero' libraries using 'R'. Import references from 'Cristin', 'Regjeringen', 'CRAN', 'ISBN' ('Alma', 'LoC'), and 'DOI' ('CrossRef', 'DataCite') to a 'Zotero' library. Add, edit, copy, or delete items, including attachments and collections, and export references to 'BibLaTeX' (and other formats).

**License** MIT + file LICENSE

**URL** <https://github.com/oeysan/c2z/>, <https://oeysan.github.io/c2z/>

**BugReports** <https://github.com/oeysan/c2z/issues/>

**Depends** R (>= 4.1)

**Imports** dplyr, httr, jsonlite, purrr, rlang, rvest, stats, tibble, tidyverse, tidyselect, utils

**Suggests** covr, knitr, readr, rmarkdown, testthat (>= 3.0.0)

**VignetteBuilder** knitr

**Config/testthat.edition** 3

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 7.2.3

**NeedsCompilation** no

**Author** Øystein Olav Skaar [aut, cre, cph]  
(<<https://orcid.org/0000-0001-5605-3492>>)

**Repository** CRAN

**Date/Publication** 2023-08-10 07:30:05 UTC

[Cristin](#)

*Search Cristin API*

---

### Description

Use search parameters for the Cristin API and return the results as a tibble. See [CristinWrangler](#)

### Usage

```
Cristin(
  id = NULL,
  doi = NULL,
  title = NULL,
  contributor = NULL,
  issn = NULL,
  unit = NULL,
  institution = NULL,
  user = NULL,
  category = NULL,
```

```

published_since = NULL,
published_before = NULL,
created_since = NULL,
created_before = NULL,
modified_since = NULL,
modified_before = NULL,
year_reported = NULL,
project_code = NULL,
funding_source = NULL,
funding = NULL,
lang = NULL,
page = 1,
per_page = 1000,
max.results = NULL,
no.results = FALSE,
sort = NULL,
filter = NULL,
fields = "all",
open.query = NULL,
all.results = TRUE,
force = FALSE,
remove.duplicates = TRUE,
silent = FALSE,
base.url = "https://api.cristin.no/v2/results",
custom.url = NULL,
use.identifiers = TRUE,
crossref.search = FALSE,
autosearch = TRUE,
zotero = NULL,
zotero.import = TRUE,
zotero.check = TRUE,
remove.na = TRUE,
replace.na = "book",
force.type = NULL,
override = FALSE,
polite = TRUE,
log = list()
)

```

## Arguments

<code>id</code>	The Cristin id of the result, Default: NULL
<code>doi</code>	DOI name (e.g. doi=10.1000/123456), Default: NULL
<code>title</code>	The title of the result, Default: NULL
<code>contributor</code>	Author's name or Cristin person id, Default: NULL
<code>issn</code>	The issn of the result, Default: NULL
<code>unit</code>	Id (e.g. unit=185.53.18.10), Default: NULL

institution	Id (one number, e.g. institution=185), name or acronym of the institution the contributors belong to, Default: NULL
user	A person's username in Cristin together with the institution id separated by colon (e.g., 'askeladd:185'), Default: NULL
category	Categories. See <a href="#">category codes</a> , Default: NULL
published_since	Results published since and inclusive the given year, (yyyy), Default: NULL
published_before	Results published before and inclusive the given year, (yyyy), Default: NULL
created_since	Results created since and inclusive the given date, (yyyy-mm-dd), Default: NULL
created_before	Results created before and inclusive the given date, (yyyy-mm-dd), Default: NULL
modified_since	Results modified since and inclusive the given date, (yyyy-mm-dd), Default: NULL
modified_before	Results modified before and inclusive the given date, (yyyy-mm-dd), Default: NULL
year_reported	The year a result was reported, Default: NULL
project_code	Project code is the internal reference number used by funding source, Default: NULL
funding_source	Funding source code e.g: NFR, Default: NULL
funding	Funding source code e.g: NFR, and project_code together separated by colon (e.g., NFR:1234), Default: NULL
lang	Two letter <a href="#">language code</a> , Default: NULL
page	Page number. See <a href="#">pagination</a> , Default: 1
per_page	Number of items per page (1000 is max). See <a href="#">pagination</a> , Default: 1000
max.results	Do you need a limit?, Default: NULL
no.results	Do you need only the number of results?, Default: FALSE
sort	Sorts on 'category' and/or 'year_published'. See <a href="#">search and sort</a> . Default sort order is on 'cristin_result_id' in ascending order, Default: NULL
filter	Vector of categories to include in results. See <a href="#">category code</a> , Default: NULL
fields	'fields = all' gives a list of result objects with all available fields. If this parameter is omitted, a list of result summaries with fewer fields will be returned, Default: all
open.query	Define your own query terms, Default: NULL
all.results	Find all results in query, Default: TRUE
force	Force is seldom wise, but sometimes..., Default: FALSE
remove.duplicates	Remove duplicates if TRUE, Default: TRUE
silent	c2z is noisy, tell it to be quiet, Default: FALSE
base.url	The base url for the Cristin API, Default: <a href="https://api.cristin.no/v2/results">https://api.cristin.no/v2/results</a>

custom.url	Define your own Cristin API url, Default: NULL
use.identifiers	Use if ISBN/DOI identifiers if enabled, Default: TRUE
crossref.search	Query Crossref database based on title, authors, and date if enabled, Default: FALSE
autosearch	Results could be automatically evaluated (based on some logic) or you could inspect them manually if set to FALSE, Default: TRUE
zotero	A list with information on the specified Zotero library (e.g., id, API key, collections, and items), Default: NULL
zotero.import	Use <a href="#">CristinWrangler</a> to wrangle metadata into an acceptable format for Zotero, Default: TRUE
zotero.check	Check for Cristin references already stored in Zotero, Default: TRUE
remove.na	Cristin contains many, more or less, obscure categories, and not all are (yet) supported. By default these are removed, however, if this option is set to FALSE unsupported categories are treated according to replace.na, Default: TRUE
replace.na	May the odds be in your favor and replace unsupported categories with a predefined itemType if remove.na is set to false, Default: 'book'
force.type	Force all items to a predefined itemType, Default: NULL
override	Put your faith in the algorithms and the identifiers (i.e., DOI/ISBN) and override what is reported in Cristin, Default: FALSE
polite	Please store your email in '.Renvironment' to query Crossref, Default: TRUE
log	A list for storing log elements, Default: list()

## Details

Please see #' <https://oeysan.github.io/c2z/>

## Value

A list with (exported) items from Cristin

## See Also

[http\\_error](#), [GET](#), [RETRY](#) [tail](#), [head](#) [slice](#)

## Examples

```
# Simple `Cristin` search by id
example <- Cristin(id = "840998")

# Print index using `ZoteroIndex`
if (any(nrow(example$results))) {
  ZoteroIndex(example$results) |>
    dplyr::select(name) |>
    print(width = 80)
```

```
}
```

**CristinMonthly***Create a month-to-month bibliography of selected units***Description**

Create a bibliography in a newsletter format from month-to-month From either a specified unit or a set of units (e.g., A University -> Faculties -> Departments -> Groups). The function has the ability to create HTML output designed for emails and/or webpages.

**Usage**

```
CristinMonthly(
  zotero,
  unit.key,
  style = "apa-single-spaced",
  locale = "nn-NO",
  start.date = Sys.Date(),
  end.date = NULL,
  use.filter = TRUE,
  filter = NULL,
  nvi = TRUE,
  user.cards = FALSE,
  use.identifiers = TRUE,
  zotero.check = FALSE,
  lang = "nn",
  post = FALSE,
  create.email = FALSE,
  create.web = FALSE,
  subject = NULL,
  header = NULL,
  footer = NULL,
  replace.style = TRUE,
  width = 700,
  silent = FALSE,
  log = list()
)
```

**Arguments**

<code>zotero</code>	What Zotero library to use
<code>unit.key</code>	What unit to search for
<code>style</code>	Citation style to use for appended bibliography and/or citations, Default: 'apa-single-spaced'

locale	Desired language format of bibliography, Default: 'nn-NO'
start.date	Results created from specified date (YYYY-MM), Default: Sys.Date()
end.date	Results created before specified date (YYYY-MM), Default: NULL
use.filter	Filter out specific items (otherwise supported by 'CristinWrangler'), Default: TRUE
filter	Filter out specific item types, will default to item types usually associated with NVI, Default: NULL
nvi	Filter out Cristin items not 1/2 in NVI, Default: TRUE
user.cards	Get business cards of contributors (currently INN), Default: FALSE
use.identifiers	Use if ISBN/DOI identifiers if enabled, Default: TRUE
zotero.check	Check if Cristin items exists in Zotero library , Default: FALSE
lang	Set Cristin language (nn, nb, en), Default: 'nn'
post	Post new items to specified Zotero library, Default: FALSE
create.email	Create HTML output for email, Default: FALSE
create.web	Create HTML output for web, Default: FALSE
subject	Add a custom subject to email, Default: NULL
header	Add a custom header to email, Default: NULL
footer	Add a custom footer to email, Default: NULL
replace.style	Email clients (e.g., Outlook) is poor at rendering CSS, and the default setting is to remove hanging indent, Default: TRUE
width	Width of email in pixels, Default: 700
silent	c2z is noisy, tell it to be quiet, Default: FALSE
log	A list for storing log elements, Default: list()

## Details

Please see <https://oeysan.github.io/c2z/>

## Value

A list with bibliography and information for defined units

## See Also

`filter, arrange, mutate, bind_rows, bind_cols, select, group_by, case_when, context, distinct, pull, mutate_joins, join_by, rename, across, reexports, mutate_all pmap, map tibble setNames`

## Examples

```
# Dummy example
newsletter <- CristinMonthly(
  Zotero(
    id = "4827927",
    api = "RqlAm1H5l1KPghfCseAq1sQ1"
  ),
  "209.0.0.0"
)
```

CristinSupported      *Check for supported export formats from Cristin to Zotero*

## Description

Used to filter Cristin categories that are not supported

## Usage

```
CristinSupported(
  data = NULL,
  zotero.check = TRUE,
  zotero = NULL,
  remove.na = TRUE,
  replace.na = "book",
  force.type = NULL,
  remove.duplicates = TRUE,
  silent = FALSE,
  log = list()
)
```

## Arguments

<code>data</code>	Zotero-type matrix, Default: NULL
<code>zotero.check</code>	Should the function look for duplicates?, Default: TRUE
<code>zotero</code>	List with Zotero information used to check for duplicates, Default: NULL
<code>remove.na</code>	Cristin contains many, more or less, obscure categories, and not all are (yet) supported. By default these are removed, however, if this option is set to FALSE unsupported categories are treated according to replace.na, Default: TRUE
<code>replace.na</code>	May the odds be in your favor and replace unsupported categories with a predefined itemType if remove.na is set to false, Default: 'book'
<code>force.type</code>	Force all items to a predefined itemType, Default: NULL
<code>remove.duplicates</code>	Remove duplicates if TRUE, Default: TRUE
<code>silent</code>	c2z is noisy, tell it to be quiet, Default: FALSE
<code>log</code>	A list for storing log elements, Default: list()

## Details

Please see <https://oeysan.github.io/c2z/>

## Value

Zotero supported items with unsupported categories as NA

## See Also

[tibble](#)

## Examples

```
# Supported Cristin items
print(CristinSupported(), n = 5)
```

---

CristinUnits

*create a tibble with information about selected Cristin units*

---

## Description

Create a tibble with information about (nested) units in Cristin (e.g., A University -> Faculties -> Departments -> Groups). The tibble can than be used to extract data for each unit from Cristin. Used by ‘CristinMonthly’

## Usage

```
CristinUnits(unit.key, subunits = TRUE, recursive = FALSE, lang = "en")
```

## Arguments

unit.key	Unit to search for
subunits	Add subunits, Default: TRUE
recursive	Search for (nested) subunits, Default: FALSE
lang	PARAM_DESCRIPTION, Default: ‘en’

## Details

Used with ‘CristinMonthly’ to create month-to-month bibliography of selected units

## Value

A tibble containing information about selected units

## See Also

[RETRY](#) [transmute](#), [bind\\_rows](#) [pmap](#)

## Examples

```
# Find units for Inland University
CristinUnits("209.0.0.0") |>
  dplyr::select(id, path2) |>
  print(width = 80)
```

CristinWrangler

*Wrangle Cristin metadata into Zotero-type format*

## Description

The little engine that could, at least try, to wrangle metadata from Cristin into a Zotero-type matrix. References can be augmented, or replaced with metadata gathered through ISBN or DOI identifiers, and through Crossref queries if all other fails. Or, hope the best and place your misguided faith in the ability of researchers to correctly register their own publications.

## Usage

```
CristinWrangler(
  data,
  use.identifiers = TRUE,
  crossref.search = FALSE,
  autosearch = TRUE,
  override = FALSE,
  silent = FALSE,
  polite = TRUE,
  log = list()
)
```

## Arguments

data	Tibble containing metadata from Cristin
use.identifiers	Use if ISBN/DOI identifiers if enabled, Default: TRUE
crossref.search	Query Crossref database based on title, authors, and date if enabled, Default: FALSE
autosearch	Results could be automatically evaluated (based on some logic) or you could inspect them manually if set to FALSE, Default: TRUE
override	Put your faith in the algorithms and the identifiers (i.e., DOI/ISBN) and override what is reported in Cristin, Default: FALSE
silent	Running silent, running deep, Default: FALSE
polite	Please store your email in ‘.Renvironment’ to query Crossref, Default: TRUE
log	A list for storing log elements, Default: list()

**Details**

Please see <https://oeysan.github.io/c2z/>

**Value**

A Zotero-type matrix (tibble)

**See Also**

[unnest](#), [nest](#) [filter](#), [across](#), [reexports](#), [bind](#), [mutate](#), [distinct](#) RETRY tibble

**Examples**

```
# Simple `Cristin` search by id with import set as FALSE
example <- Cristin(id = "840998", zotero.import = FALSE)

if (any(nrow(example$results))) {
  # Check if results is supported using `CristinSupported`
  example.supported <- CristinSupported(example$results)

  # Use `ZoteroIndex` to print `CristinWrangler`
  ZoteroIndex(CristinWrangler(example.supported$data)$results) |>
    dplyr::select(name) |>
    print(width = 80)
}
```

**Description**

Query CrossRef by DOI and fetch metadata

**Usage**

```
DoiCrossref(data, meta = list(), silent = TRUE, log = list())
```

**Arguments**

data	XML data from CrossRef containing metadata
meta	A list collecting all metadata used to create , Default: list()
silent	c2z is noisy, tell it to be quiet, Default: TRUE
log	A list for storing log elements, Default: list()

**Details**

Please see <https://oeysan.github.io/c2z/>

**Value**

A Zotero-type matrix (tibble)

**Examples**

```
# `DoiCrossref` is called from `ZoteroDoi` (if item found)
example <- ZoteroDoi("10.1126/sciadv.abd1705")

# Print index using `ZoteroIndex`
if (!is.null(example$data)) {
  ZoteroIndex(example$data) |>
    dplyr::select(name) |>
    print(width = 80)

  # Display catalog
  example$data$libraryCatalog
}
```

**DoiDatacite**

*Wrangle DataCite metadata into Zotero-type format*

**Description**

Query DataCite by DOI and fetch metadata

**Usage**

```
DoiDatacite(data, meta = list(), silent = TRUE, log = list())
```

**Arguments**

data	XML data from DataCite containing metadata
meta	A list collecting all metadata used to create , Default: list()
silent	c2z is noisy, tell it to be quiet, Default: TRUE
log	A list for storing log elements, Default: list()

**Details**

Please see <https://oeysan.github.io/c2z/>

**Value**

A Zotero-type matrix (tibble)

**Examples**

```
# `DoiDatacite` is called from `ZoteroDoi` (if item found)
example <- ZoteroDoi("10.17605/OSF.IO/7HZ4P")

# Use `ZoteroIndex` to print
# Print index using `ZoteroIndex`
if (any(nrow(example$data))) {
  ZoteroIndex(example$data) |>
    dplyr::select(name) |>
    print(width = 80)

  # Display catalog
  example$data$libraryCatalog
}
```

**Description**

Wrapper to connect with the Zotero API and the main functions of \*c2z\*

**Usage**

```
Zotero(
  collection.names = NULL,
  collection.key = NULL,
  collection.path = NULL,
  item.key = NULL,
  library = FALSE,
  case.insensitive = TRUE,
  ancestor = FALSE,
  recursive = FALSE,
  create = FALSE,
  limit = 100,
  start = 0,
  get.collections = TRUE,
  get.items = TRUE,
  item.type = NULL,
  all.results = TRUE,
  max.results = NULL,
  collections = NULL,
```

```
items = NULL,
attachments = NULL,
metadata = NULL,
doi = NULL,
isbn = NULL,
export = FALSE,
csl.type = NULL,
csl.name = "style",
format = "biblatex",
save.data = FALSE,
save.path = NULL,
bib.name = "references",
library.type = NULL,
linkwrap = 1,
style = "apa",
locale = "en-US",
copy = FALSE,
copy.collections = TRUE,
copy.items = TRUE,
copy.extras = TRUE,
remove.missing = TRUE,
change.library = FALSE,
copy.user = TRUE,
copy.id = NULL,
copy.api = NULL,
post = FALSE,
post.collections = TRUE,
post.items = TRUE,
post.attachments = TRUE,
post.limit = 50,
delete = FALSE,
delete.collections = FALSE,
delete.items = FALSE,
delete.limit = 50,
ragnarok = FALSE,
user = TRUE,
index = FALSE,
id = NULL,
token = NULL,
token.api = NULL,
api = NULL,
force = FALSE,
base.url = "https://api.zotero.org",
silent = FALSE,
zotero = NULL,
log = list()
)
```

## Arguments

collection.names	Vector of collection names to create or search for, Default: NULL
collection.key	A specified collection key, Default: NULL
collection.path	Vector of nested collection keys, Default: NULL
item.key	A specified item key, Default: NULL
library	Use ‘ZoteroLibrary‘ to fetch collections and items, Default: FALSE
case.insensitive	Disregard letter casing when searching for collections, Default: TRUE
ancestor	Trace the lineage of a collection (i.e., find the top-level collection), Default: FALSE
recursive	Find all nested collections, Default: FALSE
create	Create missing collections, Default: FALSE
limit	Number of results per query (max 100), Default: 100
start	Starting position of query (0 = first result), Default: 0
get.collections	Fetch collections, Default: TRUE
get.items	Fetch items, Default: TRUE
item.type	Items to search for (NULL = everything), Default: NULL
all.results	Find all results in query, Default: TRUE
max.results	Do you need a limit?, Default: NULL
collections	Predefined collections (as tibble), Default: NULL
items	Predefined metadata (as tibble), Default: NULL
attachments	Predefined attachments (as tibble), Default: NULL
metadata	Predefined metadata in Zoter-format, Default: NULL
doi	Use <a href="#">ZoteroDoi</a> to fetch DOI metadata, Default: NULL
isbn	Use <a href="#">ZoteroIsbn</a> to fetch ISBN metadata, Default: NULL
export	Use ‘ZoteroExport‘ to export items, Default: FALSE
csl.type	Specify a CSL type to Official repository for Citation Style Language (CSL), Default: NULL
csl.name	Name of saved CSL file, Default: ‘style’
format	Export format of Zotero items, Default: ‘biblatex’
save.data	Save data (e.g., bibliography) to disk, Default: FALSE
save.path	Location to store data on disk, Default: NULL
bib.name	Name of exported bibliography, Default: ‘references’
library.type	Commma-separated data from Zotero (i.e., data, bib, citation), Default: NULL
linkwrap	Set URL (e.g., DOI) as HTML link (1 = yes), Default: 1
style	Citation style to use for appended bibliography and/or citations, Default: apa

locale	Desired language format of bibliography, Default: 'en-US'
copy	Use 'ZoteroCopy' to delete collections and/or items, Default: FALSE
copy.collections	Try to copy specified collections, Default: TRUE
copy.items	Try to copy specified items?, Default: TRUE
copy.extras	Try to copy specified extras (i.e., attachments and notes)?, Default: TRUE
remove.missing	Deleted missing extras, Default: TRUE
change.library	Stage changing of library (e.g., from a group to a personal library), Default: FALSE
copy.user	New user type (The functions will use 'group' as prefix if FALSE), Default: TRUE
copy.id	New id, Default: NULL
copy.api	New API key. Set API to 'NA' if key is not needed, Default: NULL
post	Use 'ZoteroPost' to post collections and/or items, Default: FALSE
post.collections	Try to copy specified collections, Default: TRUE
post.items	Try to copy specified items?, Default: TRUE
post.attachments	Try to copy specified extras (i.e., attachments and notes)?, Default: TRUE
post.limit	Number of collections/items to post per request (max 50), Default: 50
delete	Use 'ZoteroDelete' to delete collections and/or items, Default: FALSE
delete.collections	Try to delete specified collections, Default: TRUE
delete.items	Try to delete specified items?, Default: TRUE
delete.limit	Number of collections/items to delete per request (max 50), Default: 50
ragnarok	Delete EVERYTHING in the specified library, Default: FALSE
user	User type (The functions will use 'group' as prefix if FALSE), Default: TRUE
index	Create an index of items, Default: FALSE
id	User or group ID, Default: NULL
token	Name of user or group token as defined in '.Renvironment', Default: NULL
token.api	Name of API token as defined in '.Renvironment', Default: NULL
api	API key to connect with the Zotero library. Set API to 'NA' if key is not needed. See <a href="#">Zotero API</a> , Default: NULL
force	Force is seldom wise, but sometimes..., Default: FALSE
base.url	Base url of the Zotero API, Default: 'https://api.zotero.org'
silent	c2z is noisy, tell it to be quiet, Default: FALSE
zotero	A list with information on the specified Zotero library (e.g., id, API key, collections, and items), Default: NULL
log	A list for storing log elements, Default: list()

## Details

Please see <https://oeysan.github.io/c2z/>

## Value

A list with information on the specified Zotero library (e.g., id, API key, collections, and items)

## See Also

[http\\_error](#), GET

## Examples

```
# Create the default Zotero list
example <- Zotero(id = "9913421", api = "RqlAmlH5l1KPghfCseAq1sQ1")
# Print the interesting parts of an otherwise empty list
print(tail(example,5))
```

---

ZoteroAdd

*Add items to Zotero list*

---

## Description

Use identifiers or predefined data to add to the Zotero list

## Usage

```
ZoteroAdd(zotero, metadata = NULL, doi = NULL, isbn = NULL, silent = FALSE)
```

## Arguments

zotero	A list with information on the specified Zotero library (e.g., id, API key, collections, and items)
metadata	Predefined metadata in Zotero-format, Default: NULL
doi	Use <a href="#">ZoteroDoi</a> to fetch DOI metadata, Default: NULL
isbn	Use <a href="#">ZoteroIsbn</a> to fetch ISBN metadata, Default: NULL
silent	c2z is noisy, tell it to be quiet, Default: FALSE

## Details

Please see <https://oeysan.github.io/c2z/>

## Value

Will add data to the Zotero list

## Examples

```
# Add items from `ZoteroIsbn` to the default Zotero list
example <- ZoteroAdd(
  Zotero(
    id = "9913421",
    api = "RqlAmlH5l1KPghfCseAq1sQ1"
  ),
  isbn = "978-1529797138"
)
# Print index using `ZoteroIndex`
if (any(nrow(example$items))) {
  ZoteroIndex(example$items) |>
    dplyr::select(name) |>
    print(width = 80)
}
```

ZoteroCheck

*Check Zotero library for duplicates*

## Description

Remove references that are not modified since last added to Zotero

## Usage

```
ZoteroCheck(
  data,
  id,
  id.type,
  created,
  last.modified,
  zotero = NULL,
  remove.duplicates = TRUE,
  silent = FALSE,
  log = list()
)
```

## Arguments

data	Tibble containing metadata (from Cristin)
id	column containing identifier (e.g., cristin_result_id)
id.type	Type of metadata as found in the Zotero extra field ("e.g., Cristin")
created	column containing creation date in UNIX timestamp format (e.g., created)
last.modified	column containing modification date in UNIX timestamp format (e.g., last_modified)

```
zotero      A list with information on the specified Zotero library (e.g., id, API key, collections, and items), Default: NULL  
remove.duplicates  
            Remove duplicates if TRUE, Default: TRUE  
silent      c2z is noisy, tell it to be quiet, Default: FALSE  
log         A list for storing log elements, Default: list()
```

## Details

Please see <https://oeysan.github.io/c2z/>

## Value

Returns non-duplicated data in a Zotero-type matrix (tibble)

## See Also

[arrange](#), [coalesce](#), [bind\\_rows](#), [filter](#)

## Examples

```
# Simple `Cristin` search by id  
cristin.data <- Cristin(  
  id = "840998",  
  zotero.import = FALSE  
)  
  
# Simple `ZoteroCheck`  
example <- ZoteroCheck(  
  data = cristin.data$result,  
  id = "cristin_result_id",  
  id.type = "Cristin",  
  created = "created",  
  last.modified = "last_modified",  
  zotero = Zotero(  
    user = FALSE,  
    id = "4827927",  
    api = "RqlAmlH5l1KPghfCseAq1sQ1",  
    library = TRUE,  
    silent = TRUE  
)  
)
```

**ZoteroCopy***Copy collections and items from a Zotero library***Description**

Replace key identifiers with new ones while keeping existing structure and relationship between collections and items

**Usage**

```
ZoteroCopy(
  zotero,
  copy.collections = TRUE,
  copy.items = TRUE,
  copy.extras = TRUE,
  remove.missing = TRUE,
  change.library = FALSE,
  copy.user = TRUE,
  copy.id = NULL,
  copy.api = NULL,
  silent = FALSE
)
```

**Arguments**

<code>zotero</code>	A list with information on the specified Zotero library (e.g., id, API key, collections, and items)
<code>copy.collections</code>	Try to copy specified collections, Default: TRUE
<code>copy.items</code>	Try to copy specified items?, Default: TRUE
<code>copy.extras</code>	Try to copy specified extras (i.e., attachments and notes)?, Default: TRUE
<code>remove.missing</code>	Deleted missing extras, Default: TRUE
<code>change.library</code>	Stage changing of library (e.g., from a group to a personal library), Default: FALSE
<code>copy.user</code>	New user type (The functions will use ‘group‘ as prefix if FALSE), Default: TRUE
<code>copy.id</code>	New id, Default: NULL
<code>copy.api</code>	New API key, Default: NULL
<code>silent</code>	c2z is noisy, tell it to be quiet, Default: FALSE

**Details**

Please see <https://oeysan.github.io/c2z/>

**Value**

A list with information on the specified Zotero library (e.g., copied collections and items)

**See Also**

[GET mutate](#), [case\\_when](#), [filter](#), [select](#), [across](#), [arrange](#), [pmap](#), [all\\_of](#)

**Examples**

```
# Fetching collections and items from default group
zotero = Zotero(
  user = FALSE,
  id = "4827927",
  api = "RqlAmlH5l1KPghfCseAq1sQ1",
  library = TRUE
)

# Display collections
if (any(nrow(zotero$collections))) {
  zotero$collections |>
    dplyr::select(key, version, parentCollection) |>
    print(width = 80)
}

# Display items
if (any(nrow(zotero$items))) {
  zotero$items |>
    dplyr::select(key, version) |>
    print(width = 80)
}

# Copy items
example <- ZoteroCopy(
  zotero,
)

# Display collections
if (any(nrow(example$collections))) {
  example$collections |>
    dplyr::select(key, version, parentCollection) |>
    print(width = 80)
}

# Display items
if (any(nrow(example$items))) {
  example$items |>
    dplyr::select(key, version) |>
    print(width = 80)
}
```

ZoteroCran

*Wrangle CRAN metadata into Zotero-type format***Description**

Query CRAN by name and fetch metadata

**Usage**

```
ZoteroCran(id, meta = list(), silent = TRUE, log = list())
```

**Arguments**

<code>id</code>	name of R package
<code>meta</code>	A list collecting all metadata used to create , Default: list()
<code>silent</code>	c2z is noisy, tell it to be quiet, Default: TRUE
<code>log</code>	A list for storing log elements, Default: list()

**Details**

Please see <https://oeysan.github.io/c2z/>

**Value**

A Zotero-type matrix (tibble)

**See Also**

[RETRY reexports](#)

**Examples**

```
# Search cran for package `dplyr`
example <- ZoteroCran(c("dplyr", "jsonlite", "httr"))

# Print index using `ZoteroIndex`
if (any(nrow(example$data))) {
  ZoteroIndex(example$data) |>
    dplyr::select(name) |>
    print(width = 80)
}
```

---

**ZoteroDelete***Delete collections and items from a Zotero library*

---

**Description**

Cleaning the Zotero library

**Usage**

```
ZoteroDelete(  
  zotero,  
  delete.collections = FALSE,  
  delete.items = FALSE,  
  delete.limit = 50,  
  force = FALSE,  
  ragnarok = FALSE,  
  silent = FALSE  
)
```

**Arguments**

zotero	A list with information on the specified Zotero library (e.g., id, API key, collections, and items)
delete.collections	Try to delete specified collections, Default: TRUE
delete.items	Try to delete specified items?, Default: TRUE
delete.limit	Number of collections/items to delete per request (max 50), Default: 50
force	Force is seldom wise, but sometimes..., Default: FALSE
ragnarok	Delete EVERYTHING in the specified library, Default: FALSE
silent	c2z is noisy, tell it to be quiet, Default: FALSE

**Details**

Please see <https://oeysan.github.io/c2z/>

**Value**

A list with information on the specified Zotero library (e.g., deleted collections and items)

**See Also**

[add\\_headers](#), [RETRY](#)

## Examples

```
# Delete everything in a group
example <- ZoteroDelete(
  Zotero(
    user = FALSE,
    id = "4988497",
    api = "RqlAm1H5l1KPghfCseAq1sQ1"
  ),
  ragnarok = TRUE,
  force = TRUE
)
```

ZoteroDoi

*Use DOI to acquire metadata*

## Description

Connects with doi.org to create metadata

## Usage

```
ZoteroDoi(doi, meta = list(), silent = TRUE, log = list())
```

## Arguments

doi	A digital object identifier
meta	A list collecting all metadata used to create , Default: list()
silent	c2z is noisy, tell it to be quiet, Default: TRUE
log	A list for storing log elements, Default: list()

## Details

Please see <https://oeysan.github.io/c2z/>

## Value

A Zotero-type matrix (tibble)

## See Also

[http\\_error](#), [GET](#), [RETRY](#) [rename](#), [html\\_attr](#), [html\\_text](#), [reexports](#), [html\\_children](#), [html\\_name](#)  
[bind](#), [arrange](#)

## Examples

```
# Simple use of `ZoteroDoi`
example <- ZoteroDoi("10.1126/sciadv.abd1705")

# Print index using `ZoteroIndex`
if (any(nrow(example$data))) {
  ZoteroIndex(example$data) |>
    dplyr::select(name) |>
    print(width = 80)
}
```

ZoteroExport

*Export Zotero items to bibliography*

## Description

Export Zotero items to a specified format (e.g., BibLaTeX) using a CSL format (e.g., APA7)

## Usage

```
ZoteroExport(
  zotero,
  csl.type = NULL,
  csl.name = "style",
  locale = "en-US",
  format = "biblatex",
  bib.name = "references",
  save.data = FALSE,
  save.path = NULL,
  silent = FALSE
)
```

## Arguments

<code>zotero</code>	A list with information on the specified Zotero library (e.g., id, API key, collections, and items)
<code>csl.type</code>	Specify a CSL type to Official repository for Citation Style Language (CSL), Default: NULL
<code>csl.name</code>	Name of saved CSL file, Default: 'style'
<code>locale</code>	Desired language format of bibliography, Default: 'en-US'
<code>format</code>	Export format of Zotero items, Default: 'biblatex'
<code>bib.name</code>	Name of exported bibliography, Default: 'references'
<code>save.data</code>	Save data (e.g., bibliography) to disk, Default: FALSE
<code>save.path</code>	Location to store data on disk, Default: NULL
<code>silent</code>	c2z is noisy, tell it to be quiet, Default: FALSE

## Details

Please see <https://oeysan.github.io/c2z/>

## Value

A list with information on the specified Zotero library (e.g., exported items, bibliography and citations)

## See Also

[select where](#)

## Examples

```
# Define Zotero list according to default group
zotero = Zotero(
  user = FALSE,
  id = "4827927",
  api = "RqlAmlH5l1KPghfCseAq1sQ1",
  item.type = "-attachment || note",
  max.result = 1,
  library = TRUE
)

# Export 1 items from the default group
example <- ZoteroExport(
  zotero
)
# Display exported
cat(example$export, fill = 80)
```

## Description

Get

## Usage

```
ZoteroGet(
  zotero,
  use.collection = TRUE,
  use.item = FALSE,
  append.collections = FALSE,
  append.items = FALSE,
```

```

append.top = FALSE,
append.file = FALSE,
custom.url = NULL,
open.query = NULL,
limit = 100,
start = 0,
format = "json",
item.keys = NULL,
collection.keys = NULL,
item.type = NULL,
library.type = NULL,
linkwrap = 1,
style = "apa",
locale = "en-US",
all.results = TRUE,
max.results = NULL,
result.type = NULL,
force = FALSE,
silent = FALSE
)

```

## Arguments

<code>zotero</code>	A list with information on the specified Zotero library (e.g., id, API key, collections, and items)
<code>use.collection</code>	Use collection key if present in Zotero list, Default: TRUE
<code>use.item</code>	Use item key if present in Zotero list, Default: FALSE
<code>append.collections</code>	Append '/collections/' to Zotero API url, Default: FALSE
<code>append.items</code>	Append '/items/' to Zotero API url, Default: FALSE
<code>append.top</code>	Append '/top/' to Zotero API url, Default: FALSE
<code>append.file</code>	Append '/file/' to Zotero API url, Default: FALSE
<code>custom.url</code>	Use a custom Zotero API url, Default: NULL
<code>open.query</code>	Use your own query, Default: NULL
<code>limit</code>	Number of results per query (max 100), Default: 100
<code>start</code>	Starting position of query (0 = first result), Default: 0
<code>format</code>	Format of response from the Zotero API, Default: 'json'
<code>item.keys</code>	Specified vector of items keys, Default: NULL
<code>collection.keys</code>	Specified vector of collection keys, Default: NULL
<code>item.type</code>	Items to search for (NULL = everything), Default: NULL
<code>library.type</code>	Commma-separated data from Zotero (i.e., data, bib, citation), Default: NULL
<code>linkwrap</code>	Set URL (e.g., DOI) as HTML link (1 = yes), Default: 1
<code>style</code>	Citation style to use for appended bibliography and/or citations, Default: apa

locale	Desired language format of bibliography, Default: 'en-US'
all.results	Find all results in query, Default: TRUE
max.results	Do you need a limit?, Default: NULL
result.type	Pointless linguistics to display result type (default = 'result'), Default: NULL
force	Force is seldom wise, but sometimes..., Default: FALSE
silent	c2z is noisy, tell it to be quiet, Default: FALSE

## Details

Please see <https://oeysan.github.io/c2z/>

## Value

A list with information on the specified Zotero library (e.g., collections and items)

## See Also

[RETRY](#)

## Examples

```
# Define Zotero list according to default settings
zotero = Zotero(
  user = FALSE,
  id = "4827927",

    dplyr::select(name) |>
    print(width = 80)
}
```

---

ZoteroGov

*Wrangle regjeringen.no metadata into Zotero-type format*

---

## Description

Query regjeringen by search word and type and fetch metadata

## Usage

```
ZoteroGov(search, type = "NOU", meta = list(), silent = TRUE, log = list())
```

## Arguments

search	Search term (e.g., 2018: 2)
type	type of query (e.g., white paper, official norwegian reports), Default: "NOU"
meta	A list collecting all metadata used to create , Default: list()
silent	c2z is noisy, tell it to be quiet, Default: TRUE
log	A list for storing log elements, Default: list()

## Details

Please see <https://oeysan.github.io/c2z/>

## Value

A Zotero-type matrix (tibble)

## See Also

[RETRY](#) [reexports](#) [bind](#), [arrange](#)

## Examples

```
# Search the default entity, Norwegian official reports in regjeringen.no
example <- ZoteroGov("2001:4")
# Print index using `ZoteroIndex`
if (any(nrow(example$data))) {
  ZoteroIndex(example$data) |>
    dplyr::select(name) |>
    print(width = 80)
}
```

**ZoteroIndex***Create an index of Zotero items***Description**

The function creates a index containing key information about the present Zotero items

**Usage**

```
ZoteroIndex(data)
```

**Arguments**

data	Tibble containing Zotero-type metadata (e.g., from Cristin)
------	---

**Details**

Please see <https://oeysan.github.io/c2z/>

**Value**

A tibble

**See Also**

[filter](#), [mutate](#), [across](#), [na\\_if](#), [case\\_when](#), [arrange](#), [group\\_by](#), [context](#), [select](#) everything  
[pmap](#)

**Examples**

```
# Access the default group library
example = Zotero(
  user = FALSE,
  id = "4827927",
  api = "RqlAmlH5l1KPghfCseAq1sQ1",
  library = TRUE
)
# Print index using `ZoteroIndex`
if (any(nrow(example$items))) {
  ZoteroIndex(example$items) |>
    dplyr::select(name) |>
    print(width = 80)
}
```

---

**ZoteroIsbn***Search libraries using ISBN or MMS ID*

---

## Description

Query libraries using ISBN (or MMS ID) and fetch metadata

## Usage

```
ZoteroIsbn(keys, meta = list(), silent = TRUE, log = list())
```

## Arguments

keys	Keys to search with (e.g., ISBN or MMS ID)
meta	A list collecting all metadata used to create , Default: list()
silent	c2z is noisy, tell it to be quiet, Default: TRUE
log	A list for storing log elements, Default: list()

## Details

Please see <https://oeysan.github.io/c2z/>

## Value

A Zotero-type matrix (tibble)

## See Also

`rename`, `html_children`, `html_attr`, `html_text`, `reexports` `bind`, `distinct`, `arrange` `tibble`  
RETRY `setNames` `toJSON`, `fromJSON`

## Examples

```
# Search libraries for ISBN metadata
example <- ZoteroIsbn("978-1529797138")

# Print index using `ZoteroIndex`
if (any(nrow(example$data))) {
  ZoteroIndex(example$data) |>
    dplyr::select(name) |>
    print(width = 80)
}
```

**ZoteroKey***Create Zotero key or write token***Description**

Create an identifier for Zotero items/collections or a write token to library

**Usage**

```
ZoteroKey(token = FALSE)
```

**Arguments**

token	Create a write token, Default: FALSE
-------	--------------------------------------

**Details**

Please see <https://oeysan.github.io/c2z/>

**Value**

Will return a 8 character Zotero key or 32 character write token

**Examples**

```
# Create a Zotero key
key <- ZoteroKey()
# Create a write token
token <- ZoteroKey(TRUE)
```

**ZoteroLibrary***Access the Zotero library***Description**

The function uses information stored in the ‘zotero’ list to access specified collections and items in the Zotero library

## Usage

```
ZoteroLibrary(  
    zotero,  
    case.insensitive = TRUE,  
    ancestor = FALSE,  
    recursive = FALSE,  
    create = FALSE,  
    limit = 100,  
    start = 0,  
    get.collections = TRUE,  
    get.items = TRUE,  
    item.type = NULL,  
    all.results = TRUE,  
    max.results = NULL,  
    library.type = NULL,  
    linkwrap = 1,  
    style = "apa",  
    locale = "en-US",  
    force = FALSE,  
    silent = FALSE  
)
```

## Arguments

<code>zotero</code>	A list with information on the specified Zotero library (e.g., id, API key, collections, and items)
<code>case.insensitive</code>	Disregard letter casing when searching for collections, Default: TRUE
<code>ancestor</code>	Trace the lineage of a collection (i.e., find the top-level collection), Default: FALSE
<code>recursive</code>	Find all nested collections, Default: FALSE
<code>create</code>	Create missing collections, Default: FALSE
<code>limit</code>	Number of results per query (max 100), Default: 100
<code>start</code>	Starting position of query (0 = first result), Default: 0
<code>get.collections</code>	Fetch collections, Default: TRUE
<code>get.items</code>	Fetch items, Default: TRUE
<code>item.type</code>	Items to search for (NULL = everything), Default: NULL
<code>all.results</code>	Find all results in query, Default: TRUE
<code>max.results</code>	Do you need a limit?, Default: NULL
<code>library.type</code>	Commma-separated data from Zotero (i.e., data, bib, citation), Default: NULL
<code>linkwrap</code>	Set URL (e.g., DOI) as HTML link (1 = yes), Default: 1
<code>style</code>	Citation style to use for appended bibliography and/or citations, Default: apa
<code>locale</code>	Desired language format of bibliography, Default: 'en-US'

force	Force is seldom wise, but sometimes..., Default: FALSE
silent	c2z is noisy, tell it to be quiet, Default: FALSE

### Details

Please see <https://oeysan.github.io/c2z/>

### Value

A list with information on the specified Zotero library (e.g., collections and items)

### See Also

[toJSON](#), [fromJSON](#) [distinct](#), [arrange](#) [tibble](#)

### Examples

```
# Access the default group library
example <- ZoteroLibrary(
  Zotero(
    user = FALSE,
    id = "4827927",
    api = "RqlAmlH5l1KPghfCseAq1sQ1"
  )
)
# Print index using `ZoteroIndex`
if (any(nrow(example$items))) {
  ZoteroIndex(example$items) |>
    dplyr::select(name) |>
    print(width = 80)
}
```

### Description

Use the CrossRef API to match data (e.g., Cristin metadata with Crossref metadata) or search by title, authors and date

### Usage

```
ZoteroMatch(
  title,
  authors,
  date,
  haystack = NULL,
```

```

haystack.size = 3,
crossref.search = FALSE,
autosearch = FALSE,
cristin.data = NULL,
external.data = NULL,
polite = TRUE,
silent = FALSE,
log = list()
)

```

## Arguments

title	Title of reference
authors	creators of the reference
date	publication date of the reference
haystack	Potential matches for search term (i.e., needle), Default: NULL
haystack.size	Number of items in the haystack, Default: 3
crossref.search	Search CrossRef if needle not found in haystack, Default: FALSE
autosearch	Match automatically or compare needle with haystack, Default: FALSE
cristin.data	Metadata from Cristin, Default: NULL
external.data	Metadata from external source (e.g., CrossRef), Default: NULL
polite	Will use an email stored in '.Renvironment', Default: TRUE
silent	Running silent, running deep, Default: FALSE
log	A list for storing log elements, Default: list()

## Details

Please see <https://oeysan.github.io/c2z/>

## Value

A Zotero-type matrix (tibble) if match is found otherwise NULL

## See Also

[select](#), [reexports](#), [mutate](#), [coalesce](#), [pull](#) [sym](#) [RETRY](#) [toJSON](#), [fromJSON](#) [adist](#), [head](#) [map](#)

## Examples

```

# Conduct an autosearch in CrossRef using title, authors and date
example <- ZoteroMatch(
  title = "Nonreplicable publications",
  authors = "Serra-Garcia & Gneezy",
  date = "2021",
  autosearch = TRUE
)

```

```
)
# Print index using `ZoteroIndex`
if (any(nrow(example$data))) {
  ZoteroIndex(example$data) |>
    dplyr::select(name) |>
    print(width = 80)
}
```

**ZoteroPost***Post collections and items to a Zotero library***Description**

Create or update collections and items in a specified library

**Usage**

```
ZoteroPost(
  zotero,
  post.collections = TRUE,
  post.items = TRUE,
  post.attachments = TRUE,
  post.limit = 50,
  force = FALSE,
  silent = FALSE
)
```

**Arguments**

<code>zotero</code>	A list with information on the specified Zotero library (e.g., id, API key, collections, and items)
<code>post.collections</code>	Try to copy specified collections, Default: TRUE
<code>post.items</code>	Try to copy specified items?, Default: TRUE
<code>post.attachments</code>	Try to copy specified extras (i.e., attachments and notes)?, Default: TRUE
<code>post.limit</code>	Number of collections/items to post per request (max 50), Default: 50
<code>force</code>	Force is seldom wise, but sometimes..., Default: FALSE
<code>silent</code>	c2z is noisy, tell it to be quiet, Default: FALSE

**Details**

Please see <https://oeysan.github.io/c2z/>

**Value**

A list with information on the specified Zotero library (e.g., posted collections and items)

**See Also**

```
select, bind, mutate add_headers, RETRY toJSON, fromJSON as_tibble, add_column stack  
setNames
```

**Examples**

```
# Connect to the public group "c2z_delete"  
# NB! This process can be done using only `Zotero` (see README)  
zotero <- Zotero(  
  user = FALSE,  
  id = "4988497",  
  api = "RqlAmlH5l1KPghfCseAq1sQ1"  
)  
  
# Create a new collection for POST  
zotero$collections <- tibble::tibble(  
  key = ZoteroKey(),  
  version = 0,  
  name = "Post-test",  
  parentCollection = "FALSE"  
)  
  
# Add item to post using `ZoteroAdd` (and `ZoteroDoi`)  
zotero <- ZoteroAdd(  
  zotero,  
  doi = "10.1126/sciadv.abd1705"

    dplyr::select(name) |>  
    print(width = 80)
```

}

---

**ZoteroTypes***List with empty zotero-items*

---

**Description**

Each tibble in the list represents a zotero-item

**Usage**

```
ZoteroTypes(type = NULL, names = TRUE)
```

**Arguments**

type	Type of zotero-item, Default: NULL
names	return only column names if set to TRUE, Default: TRUE

**Format**

A list with 36 tibbles with zero rows and various columns

**Details**

Used to create Zotero-items from list of metadata

**Value**

Either list of zotero-items or specified item

**Examples**

```
# All zotero-items  
names(ZoteroTypes())  
# Column names of item-type `book`  
ZoteroTypes("book")
```
