

Package ‘geojsonsf’

October 13, 2022

Type Package

Title GeoJSON to Simple Feature Converter

Version 2.0.3

Date 2022-05-31

Description Converts Between GeoJSON and simple feature objects.

License MIT + file LICENSE

URL <https://github.com/SymbolixAU/geojsonsf>

BugReports <https://github.com/SymbolixAU/geojsonsf/issues>

Encoding UTF-8

LazyData true

Depends R (>= 3.3.0)

SystemRequirements C++11

LinkingTo geometries, jsonify (>= 1.1.1), rapidjsonr (>= 1.2.0), Rcpp, sfheaders (>= 0.2.2)

Imports Rcpp

RoxxygenNote 7.1.0

Suggests covr, jsonify, knitr, rmarkdown, tinytest

VignetteBuilder knitr

NeedsCompilation yes

--------------	-----------

df_geojson	<i>df to GeoJSON</i>
-------------------	----------------------

Description

Converts data.frame objects to GeoJSON. Each row is considerd a POINT

Usage

```
df_geojson(
  df,
  lon,
  lat,
  z = NULL,
  m = NULL,
  atomise = FALSE,
  simplify = TRUE,
  digits = NULL,
  factors_as_string = TRUE
)
```

Arguments

df	data.frame
lon	column of df containing the longitude data
lat	column of df containing the latitude data
z	column of df containing the Z attribute of the GeoJSON
m	column of df containing the M attribute of the GeoJSON. If supplied, you must also supply z
atomise	logical indicating if the data.frame should be converted into a vector of GeoJSON objects
simplify	logical indicating if data.frame without property columns should simplify (TRUE) into a vector of GeoJSON, or (FALSE). If atomise is TRUE this argument is ignored.

<code>digits</code>	integer specifying the number of decimal places to round numerics. numeric values are coerced using <code>as.integer</code> , which may round-down the value you supply. Default is NULL - no rounding
<code>factors_as_string</code>	logical indicating if factors should be treated as strings. Defaults to TRUE.

Value

vector of GeoJSON

Examples

```
df <- data.frame(lon = c(1:5, NA), lat = c(1:5, NA), id = 1:6, val = letters[1:6])
df_geojson( df, lon = "lon", lat = "lat")
df_geojson( df, lon = "lon", lat = "lat", atomise = TRUE)

df <- data.frame(lon = c(1:5, NA), lat = c(1:5, NA) )
df_geojson( df, lon = "lon", lat = "lat")
df_geojson( df, lon = "lon", lat = "lat", simplify = FALSE)

df <- data.frame(lon = c(1:5), lat = c(1:5), elevation = c(1:5) )
df_geojson( df, lon = "lon", lat = "lat", z = "elevation")
df_geojson( df, lon = "lon", lat = "lat", z = "elevation", simplify = FALSE)

df <- data.frame(lon = c(1:5), lat = c(1:5), elevation = c(1:5), id = 1:5 )
df_geojson( df, lon = "lon", lat = "lat", z = "elevation")
df_geojson( df, lon = "lon", lat = "lat", z = "elevation", atomise = TRUE)

## to sf objects
geo <- df_geojson( df, lon = "lon", lat = "lat", z = "elevation")
sf <- geojson_sf( geo )
```

Description

Converts GeoJSON to an ‘sf‘ object

Usage

```
geojson_sf(
  geojson,
  expand_geometries = FALSE,
  input = NULL,
  wkt = NULL,
```

```

    crs = NULL,
    proj4string = NULL,
    buffer_size = 1024
)

```

Arguments

geojson	string or vector of GeoJSON, or a URL or file pointing to a geojson file
expand_geometries	logical indicating whether to unnest GEOMETRYCOLLECTION rows. see details
input	user input for coordinate reference system object
wkt	well-known text for coordinate reference system object
crs	deprecated. coordinate reference system. See Details
proj4string	deprecated. proj4string. See Details
buffer_size	size of buffer used when reading a file from disk. Defaults 1024

Details

specifying `expand_geometries = TRUE` will expand individual GEOMETRYCOLLECTION geometries to their own row in the resulting ‘sf’ object. If the geometries are part of a Feature (i.e., with properties), the properties will be repeated on each row.

The GEOMETRYCOLLECTION information is not kept when using `expand_geometries = TRUE`. Therefore, it is not possible to reconstruct the GEOMETRYCOLLECTION after unnesting it.

Geojson specification RFC7946 <https://tools.ietf.org/html/rfc7946#page-12> says all CRS should be the World Geodetic System 1984 (WGS 84) [WGS84] datum, with longitude and latitude units of decimal degrees. This is equivalent to the coordinate reference system identified by the Open Geospatial Consortium (OGC) URN `urn:ogc:def:crs:OGC::CRS84`

`geojson_sf` and `geojson_sf` automatically set the CRS to WGS 84. The fields `input` and `wkt` let you to overwrite the defaults.

Examples

```

## character string of GeoJSON

## load 'sf' for print methods
# library(sf)
geojson <- '{ "type" : "Point", "coordinates" : [0, 0] }'
geojson_sf(geojson)

## Not run:
## GeoJSON at a url
myurl <- "http://eric.clst.org/assets/wiki/uploads/Stuff/gz_2010_us_050_00_500k.json"
sf <- geojson_sf(myurl)

## End(Not run)

```

geojson_sfc	<i>Geojson to sfc</i>
-------------	-----------------------

Description

Extracts geometries from GeoJSON and returns an ‘sfc‘ object

Usage

```
geojson_sfc(
  geojson,
  expand_geometries = FALSE,
  input = NULL,
  wkt = NULL,
  crs = NULL,
  proj4string = NULL,
  buffer_size = 1024
)
```

Arguments

geojson	string or vector of GeoJSON, or a URL or file pointing to a geojson file
expand_geometries	logical indicating whether to unnest GEOMETRYCOLLECTION rows. see details
input	user input for coordinate reference system object
wkt	well-known text for coordinate reference system object
crs	deprecated. coordinate reference system. See Details
proj4string	deprecated. proj4string. See Details
buffer_size	size of buffer used when reading a file from disk. Defaults 1024

Details

specifying `expand_geometries = TRUE` will expand individual GEOMETRYCOLLECTION geometries to their own row in the resulting ‘sf‘ object. If the geometries are part of a Feature (i.e., with properties), the properties will be repeated on each row.

The GEOMETRYCOLLECTION information is not kept when using `expand_geometries = TRUE`. Therefore, it is not possible to reconstruct the GEOMETRYCOLLECTION after unnesting it.

Geojson specification RFC7946 <https://tools.ietf.org/html/rfc7946#page-12> says all CRS should be the World Geodetic System 1984 (WGS 84) [WGS84] datum, with longitude and latitude units of decimal degrees. This is equivalent to the coordinate reference system identified by the Open Geospatial Consortium (OGC) URN `urn:ogc:def:crs:OGC::CRS84`

`geojson_sfc` and `geojson_sf` automatically set the CRS to WGS 84. The fields `input` and `wkt` let you to overwrite the defaults.

Examples

```
## character string of GeoJSON

## load 'sf' for print methods
# library(sf)
geojson <- '{ "type": "Point", "coordinates": [0,0] }'
geojson_sf(geojson)

geojson <- '[
  { "type": "Point", "coordinates": [0,0] },
  {"type": "LineString", "coordinates": [[0,0],[1,1]]}
 ]'
geojson_sf( geojson )

## Not run:
## GeoJSON at a url
myurl <- "http://eric.clst.org/assets/wiki/uploads/Stuff/gz_2010_us_050_00_500k.json"
sf <- geojson_sf(myurl)

## End(Not run)
```

geojson_wkt

Geojson to WKT

Description

Converts GeoJSON to Well-Known Text

Usage

```
geojson_wkt(geojson)
```

Arguments

geojson	string or vector of GeoJSON, or a URL or file pointing to a geojson file
---------	--

Value

data.frame with a 'geometry' column of well-known text

Examples

```
geojson <- '{ "type": "Point", "coordinates": [0, 0] }'
geojson_wkt(geojson)
```

geo_melbourne	<i>geo_melbourne</i>
---------------	----------------------

Description

GeoJSON data of Melbourne's Inner suburbs.

Usage

```
geo_melbourne
```

Format

An object of class `geojson` (inherits from `json`) of length 1.

sfc_geojson	<i>sfc to GeoJSON</i>
-------------	-----------------------

Description

Converts 'sfc' objects to GeoJSON

Usage

```
sfc_geojson(sfc, digits = NULL)
```

Arguments

<code>sfc</code>	simple feature collection object
<code>digits</code>	integer specifying the number of decimal places to round numeric coordinates. numeric values are coerced using <code>as.integer</code> , which may round-down the value you supply. Default is <code>NULL</code> - no rounding

Value

vector of GeoJSON

Examples

```
## Not run:  
library(sf)  
sf <- sf::st_sf(list(sf::st_point(c(0,0)), sf::st_point(c(1,1))))  
sfc_geojson(sf)  
  
## End(Not run)
```

sf_geojson*sf to GeoJSON***Description**

Converts ‘sf’ objects to GeoJSON

Usage

```
sf_geojson(
  sf,
  atomise = FALSE,
  simplify = TRUE,
  digits = NULL,
  factors_as_string = TRUE
)
```

Arguments

<code>sf</code>	simple feature object
<code>atomise</code>	logical indicating if the sf object should be converted into a vector of GeoJSON objects
<code>simplify</code>	logical indicating if sf objects without property columns should simplify (TRUE) into a vector of GeoJSON, or return a Featurecollection with empty property fields (FALSE). If atomise is TRUE this argument is ignored.
<code>digits</code>	integer specifying the number of decimal places to round numerics. numeric values are coorced using <code>as.integer</code> , which may round-down the value you supply. Default is NULL - no rounding
<code>factors_as_string</code>	logical indicating if factors should be treated as strings. Defaults to TRUE.

Value

vector of GeoJSON

Examples

```
## Not run:
library(sf)
sf <- sf::st_sf(geometry = sf::st_sfc(list(sf::st_point(c(0,0)), sf::st_point(c(1,1)))))
sf$id <- 1:2
sf_geojson(sf)
sf_geojson(sf, atomise = T)

ls <- st_linenstring(rbind(c(0,0),c(1,1),c(2,1)))
mls <- st_multilinestring(list(rbind(c(2,2),c(1,3)), rbind(c(0,0),c(1,1),c(2,1))))
sfc <- st_sfc(ls, mls)
```

sf_geojson

9

```
sf <- st_sf(sfc)
sf_geojson( sf )
sf_geojson( sf, simplify = FALSE )

## End(Not run)
```
