

# Package ‘r2pptx’

October 14, 2022

**Type** Package

**Title** Object Oriented R -> PowerPoint

**Version** 0.1.0

**Description** Provides a friendly, object oriented API for creating PowerPoint slide decks in R.

**URL** <https://mattle24.github.io/r2pptx/>,  
<https://github.com/mattle24/r2pptx>

**BugReports** <https://github.com/mattle24/r2pptx/issues>

**License** GPL-3

**Encoding** UTF-8

**RoxygenNote** 7.1.1

**Depends** methods, R (>= 3.6.0)

**Imports** glue, officer

**Suggests** datasets, ggplot2, testthat (>= 3.0.0), knitr, rmarkdown

**Collate** 'location.R' 'generics.R' 'element.R' 'slide.R'  
'presentation.R' 'methods.R' 'utils.R' 'zzz.R'

**Config/testthat/edition** 3

**VignetteBuilder** knitr

**NeedsCompilation** no

**Author** Matt Lehman [aut, cre]

**Maintainer** Matt Lehman <mhlehman24@gmail.com>

**Repository** CRAN

**Date/Publication** 2021-09-15 18:40:02 UTC

**R topics documented:**

---

+,R2Pptx,R2PptxSlide-method  
*Add R2Pptx slide*

---

**Description**

Add an ‘R2PptxSlide’ object to something else compatible.

**Usage**

```
## S4 method for signature 'R2Pptx,R2PptxSlide'
e1 + e2
```

**Arguments**

e1            An object that a slide can be added to, such as an ‘R2PptxPresentation’, ‘R2PptxSlide’,  
or ‘R2PptxSlideList’.

e2            ‘R2PptxSlide’ object

**Value**

If e1 is an object of class R2PptxPresentation then returns an object of class R2PptxPresentation.  
Otherwise returns an object of class R2PptxSlideList

---

*+,R2PptxSlide,R2PptxElement-method*  
*Add element to slide*

---

**Description**

Add an R2PptxElement object to an R2PptxSlide object.

**Usage**

```
## S4 method for signature 'R2PptxSlide,R2PptxElement'  
e1 + e2
```

**Arguments**

e1	R2PptxSlide object
e2	R2PptxElement object

**Value**

An object of class R2PptxSlide, which is e1 with an additional element e2

---

*+,R2PptxSlide,R2PptxSlideList-method*  
*Add slide to slidelist*

---

**Description**

Add slide to slidelist

**Usage**

```
## S4 method for signature 'R2PptxSlide,R2PptxSlideList'  
e1 + e2
```

**Arguments**

e1	R2PptxSlide object
e2	R2PptxSlideList object

**Value**

An object of class R2PptxSlideList which is the R2PptxSlideList list e1 with an additional slide which is e2.

---

```
+ ,R2PptxSlideList,R2PptxSlideList-method
  Add slidelist to slidelist
```

---

**Description**

Add slidelist to slidelist

**Usage**

```
## S4 method for signature 'R2PptxSlideList,R2PptxSlideList'
e1 + e2
```

**Arguments**

```
e1          R2PptxSlideList object
e2          R2PptxSlideList object
```

**Value**

An object of class R2PptxSlideList which is e1 with additional slides (all the slides in e2).

---

```
get_layouts          Get layouts
```

---

**Description**

A thin wrapper around `officer::layout_summary()` to get layouts for R2PpptxPresentation objects.

**Usage**

```
get_layouts(x)
```

**Arguments**

```
x          R2PpptxPresentation object
```

**Value**

An object of class `data.frame` with fields for the layout name and the name of the slide theme (master).

---

get\_layout\_properties *Gets layout properties*

---

**Description**

A thin wrapper around `officer::plot_layout_properties()` to get layouts properties for `R2PptxPresentation` objects.

**Usage**

```
get_layout_properties(x, layout)
```

**Arguments**

x	R2PptxPresentation object
layout	character. Name of the layout to see properties for.

**Value**

An object of class `data.frame` with fields for placeholder attributes and one row per placeholder element.

---

get\_slides,R2PptxSlideList-method  
*method to get slides*

---

**Description**

method to get slides

**Usage**

```
## S4 method for signature 'R2PptxSlideList'  
get_slides(x)
```

**Arguments**

x	R2PptxSlideList object
---	------------------------

**Value**

List, a list of `R2PptxSlide` objects.

---

length, R2PptxSlide-method  
*Get slide length*

---

**Description**

Returns the number of elements in a slide

**Usage**

```
## S4 method for signature 'R2PptxSlide'
length(x)

## S4 method for signature 'R2PptxPresentation'
length(x)
```

**Arguments**

x                   'R2PptxSlide' object

**Value**

Integer, number of elements in the R2PptxSlide object  
Integer, the number of slides in the presentation.

---

new\_element           *New Element*

---

**Description**

Make a new 'R2PptxElement'. Element represent text, a flextable, an image, a ggplot2, etc to add to a slide.

**Usage**

```
new_element(key, value)
```

**Arguments**

key                   character. Name of the placeholder label for this element.  
value                  object. Object to put into a PowerPoint slide, eg text or a plot.

**Value**

An object of class R2PptxElement representing something to put on a slide.

---

new_presentation	<i>New Presentation</i>
------------------	-------------------------

---

**Description**

Make a new ‘R2PptxPresentation’. Presentations represent PowerPoint decks.

**Usage**

```
new_presentation(  
  template_path = getOption("default_pptx_template"),  
  slides = list()  
)
```

**Arguments**

`template_path` character. Path of the file that has the PowerPoint template to use. Defaults to path set in ‘options("default\_pptx\_template")’

`slides` list. Optional. List of slides to initiate the presentation with.

**Value**

An object of class R2PptxPresentation representing a future PowerPoint presentation.

---

new_slide	<i>New slide</i>
-----------	------------------

---

**Description**

Make a ‘R2PptxSlide’ object representing a PowerPoint slide.

**Usage**

```
new_slide(layout, elements = list())
```

**Arguments**

`layout` character. Name of the PowerPoint layout to use for this slide.

`elements` list. List of ‘R2PptxElements’ to initialize the slide with. Defaults to empty list.

**Value**

An object of class R2PptxSlide representing a future PowerPoint slide.

---

new_slidelist	<i>New slide list</i>
---------------	-----------------------

---

**Description**

Make a R2PptxSlideList object representing a list of PowerPoint slides

**Usage**

```
new_slidelist(slides = list())
```

**Arguments**

slides	list. List of R2PptxSlide objects to initialize the list with. Defaults to empty list.
--------	--

**Value**

An object of class R2PptxSlideList representing a list of R2pptxSlide object.

---

plot_layout	<i>Plot layout</i>
-------------	--------------------

---

**Description**

A thin wrapper around `officer::plot_layout_properties()` to plot layouts for R2PpptxPresentation objects.

**Usage**

```
plot_layout(x, layout)
```

**Arguments**

x	R2PpptxPresentation object
layout	character. Name of the layout to see properties for.

**Value**

No return value, called for side effects

---

R2PptxElement-class    *Element*

---

**Description**

An S4 class to represent text, a flextable, an image, a ggplot2, etc we add to a slide.

---

R2PptxLocation-class    *Location*

---

**Description**

A Location is used to place an element on a slide. For now this will just be a placeholder name, but eventually it could expand to be an arbitrary location

---

R2PptxPresentation-class  
   *Presentation*

---

**Description**

An S4 class to represent a PowerPoint presentation.

**Slots**

slides list. List of 'R2PptxSlide' objects.

template\_path character. File path to the PowerPoint template used for this presentation.

---

R2PptxSlide-class    *Slide*

---

**Description**

An S4 class to represent a PowerPoint slide

**Slots**

layout character. Name of the PowerPoint layout to use for this slide.

elements list. List of 'R2PptxElement' objects.

---

R2PptxSlideList-class *Slide list*

---

### Description

R2PptxSlideList is an S4 class to contain groups of R2PptxSlide objects that are not part of a presentation. It is meant to be used to create lists of slides and then be able to add the list easily to a presentation.

### Slots

slides list. A list of R2PptxSlide objects

---

template_path	<i>Get template path</i>
---------------	--------------------------

---

### Description

Get template path

### Usage

```
template_path(x)

## S4 method for signature 'R2PptxPresentation'
template_path(x)
```

### Arguments

x object to get the template path for.

### Value

Character, the file path this R2PptxPresentation points to.

### Methods (by class)

- R2PptxPresentation: Get the template path of an R2PptxPresentation object.

---

template_path<-	<i>Set template path</i>
-----------------	--------------------------

---

**Description**

Set template path

**Usage**

```
template_path(x) <- value

## S4 replacement method for signature 'R2PptxPresentation'
template_path(x) <- value
```

**Arguments**

x	object to set the template path of.
value	character. File path of the new template

**Value**

The R2PptxPresentation object x with the changed template path.

**Functions**

- `template_path<-`, R2PptxPresentation-method: Set the template path of an R2PptxPresentation object.

---

write_pptx	<i>Write pptx</i>
------------	-------------------

---

**Description**

Write an object to a '.pptx' file.

**Usage**

```
write_pptx(x, path)

## S4 method for signature 'R2PptxPresentation'
write_pptx(x, path)
```

**Arguments**

x	object
path	character. File path to write to.

**Value**

Returns the R2PptxPresentation object given to the function.

**Methods (by class)**

- R2PptxPresentation: Write a presentation to a '.pptx' file
