Package 'rbi'

August 15, 2023

Version 1.0.0

Title Interface to 'LibBi'

Imports data.table, ncdf4, processx, reshape2

Suggests coda, covr (>= 3.2.0), stringi, testthat, ggplot2, knitr, rmarkdown

Description Provides a complete interface to 'LibBi', a library for Bayesian inference (see <https://libbi.org> and Murray, 2015 <doi:10.18637/jss.v067.i10> for more information). This includes functions for manipulating 'LibBi' models, for reading and writing 'LibBi' input/output files, for converting 'LibBi' output to provide traces for use with the coda package, and for running 'LibBi' to conduct inference.

add_block

Description

Add a block to a LibBi model. If that block exists, it will be removed first.

Usage

```
## S3 method for class 'bi_model'
add_block(x, name, lines, options, ...)
```

Arguments

х	a bi_model object
name	name of the block
lines	character vector, lines in the block
options	any options to the block
	ignored

Value

a bi_model object containing the new block

attach_data

Attach a new file or data set to a libbi object

Description

Adds an (output, obs, etc.) file to a libbi object. This is useful to recreate a libbi object from the model and output files of a previous run

The bi_write options append and overwrite determine what exactly the file will contain at the end of this. If they are both FALSE (the default), any existing file will be ignored. If append is TRUE, the existing data in the file will be preserved, and any data set passed as data and not already in the file will be added. If overwrite is TRUE, existing data in the file will be preserved except for variables that exist in the passed data.

Usage

```
## S3 method for class 'libbi'
attach_data(
    x,
    file,
    data,
    in_place = FALSE,
    append = FALSE,
    overwrite = FALSE,
    quiet = FALSE,
    time_dim = character(0),
    coord_dims = list(),
    ...
)
```

Arguments

х	a libbi object	
file	the type of the file to attach, one of "output", "obs", "input" or "init"	
data	name of the file to attach, or a list of data frames that contain the outputs; it will be assumed that this is already thinned	
in_place	if TRUE, replace the file in place if it already exists in the libbi object; this can speed up the operation if append=TRUE as otherwise the file will have to be read and used again; it should be used with care, though, as it can render existing libbi objects invalid as the files they are pointing to are changed.	
append	if TRUE, will append variables if file exists; default: FALSE	
overwrite	if TRUE, will overwrite variables if file exists; default: FALSE	
quiet	if TRUE, will suppress the warning message normally given if replace=TRUE and the file exists already	
time_dim	the name of the time dimension, if one exists; default: "time"	
coord_dims	the names of the coordinate dimension, if any; should be a named list of charac- ter vectors, they are matched to variables names	
	any options to bi_write (e.g., 'time_dim')	

Value

an updated libbi object

Examples

```
bi <- libbi(model = system.file(package = "rbi", "PZ.bi"))
example_output <- bi_read(system.file(package = "rbi", "example_output.nc"))
bi <- attach_data(bi, "output", example_output)</pre>
```

4

bi_contents

Description

This function gets the name of all the variables in the passed file, list or libbi object

Usage

bi_contents(read, ...)

Arguments

read	either a path to a NetCDF file, or a NetCDF connection created using nc_open,
	or a libbi object from which to read the output
	any parameters for bi_open (especially "file")

Value

character vector of variable names

Examples

```
example_output_file <- system.file(package = "rbi", "example_output.nc")
bi_contents(example_output_file)</pre>
```

bi_file_summary NetCDF File Summary

Description

This function prints a little summary of the content of a NetCDF file, as well as its creation time. You can then retrieve variables of interest using bi_read.

Usage

bi_file_summary(...)

Arguments

. . .

Any extra parameters to bi_open, especially x and file

Value

No return value

Examples

```
example_output_file <- system.file(package = "rbi", "example_output.nc")
bi_file_summary(example_output_file)
```

bi_generate_dataset Bi Generate Dataset

Description

This function is deprecated and has been renamed to generate_dataset

Usage

```
bi_generate_dataset(..., output_every = 1)
```

Arguments

	arguments to be passed to sample.libbi, especially 'model', 'end_time' and 'seed'.
output_every	real; if given, noutputs will be set so that there is output every output_every time steps; if set to 0, only generate an output at the final time

Value

a libbi object, the generated data set

bi_model

Bi Model

Description

bi_model creates a model object for Rbi from a libbi file, URL or character vector. Once the instance is created, the model can be fed to a libbi object.

Usage

bi_model(filename, lines, ...)

Arguments

filename	the file name of the model file
lines	lines of the model (if no filename is given), a character vector
	ignored

bi_read

Value

a {bi_model} object containing the newly created model

See Also

fix, insert_lines, remove_lines, replace_all, get_name, set_name, write_model

Examples

```
model_file_name <- system.file(package = "rbi", "PZ.bi")
PZ <- bi_model(filename = model_file_name)</pre>
```

bi_read

Bi Read

Description

This function reads all variable from a NetCDF file or the output of a libbi object. The file can be specified as a string to the filepath, in which case a NetCDF connection is opened, or directly as a NetCDF connection.

Usage

```
bi_read(
    x,
    vars,
    dims,
    model,
    type,
    file,
    missval_threshold,
    coord_dims = list(),
    thin,
    verbose = FALSE,
    clear_cache = FALSE,
    init_to_param = FALSE,
    burn = 0
)
```

Arguments

x	either a path to a NetCDF file, or a NetCDF connection created using nc_open, or a libbi object from which to read the output
vars	variables to read; if not given, all will be read
dims	factors for dimensions
model	model file or a bi_model object (if x is not a libbi object)

type	vector of types of variable to read (out of "param", "state", "noise", "obs"). This needs 'x' to be a libbi object or model to be specified
file	which file to read (if x is given as a libbi object): one of "output" (default), "init", "input", "obs"
missval_thresh	old
	upper threshold for the likelihood
coord_dims	any coord dimensions, given as a named list of character vectors, where each element corresponds to the variable of the same name, and the character vector are the coord dimensions
thin	thinning (keep only 1/thin of samples)
verbose	if TRUE, will print variables as they are read
clear_cache	if TRUE, will clear the cache and re-read the file even if cached data exists
init_to_param	logical; if TRUE, convert states to initial values
burn	number of initial samples to discard; default: 0

Value

a list of data frames and/or numbers that have been read

Examples

```
example_output_file <- system.file(package = "rbi", "example_output.nc")
d <- bi_read(example_output_file)</pre>
```

	• •
bı	write
· · · -	

Create (e.g., init or observation) files for LibBi

Description

This function creates (or appends to) a NetCDF file for LibBi from the given list of vectors and/or data frames. Since any files can be passed to libbi directly via the init, input and obs options, this is mostly used internally, this is mostly used internally.

```
bi_write(
   filename,
   variables,
   append = FALSE,
   overwrite = FALSE,
   time_dim,
   coord_dims,
   dim_factors,
   value_column = "value",
   guess_time = FALSE,
   verbose
)
```

bi_write

Arguments

filename	a path to a NetCDF file to write the variables into, which will be overwritten if it already exists. If necessary, ".nc" will be added to the file name	
variables	a list object, the names of which should be the variable names and values should be either single values or data frames	
append	if TRUE, will append variables if file exists; default: FALSE	
overwrite	if TRUE, will overwrite variables if file exists; default: FALSE	
time_dim	the name of the time dimension, if one exists; default: "time"	
coord_dims	the names of the coordinate dimension, if any; should be a named list of charac- ter vectors, they are matched to variables names	
dim_factors	factors that dimensions have; this corresponds to the dims element of a libbi object	
value_column	if any variables are data frames, which column contains the values (default: "value")	
guess_time	whether to guess time dimension; this would be a numerical column in the data frame given which is not the value_column; only one such column must exist	
verbose	if TRUE, will print variables as they are read	

Details

The list of variables must follow the following rules. Each element of the list must itself be one of:

1) a data frame with a value_column column (see option 'value_column') and any number of other columns indicating one or more dimensions

2) a numeric vector of length one, with no dimensions

The name of the list elements itself is used to create the corresponding variable in the NetCDF file.

Value

A list of the time and coord dims, and factors in extra dimensions, if any

Examples

```
filename <- tempfile(pattern = "dummy", fileext = ".nc")
a <- 3
b <- data.frame(
   dim_a = rep(1:3, time = 2), dim_b = rep(1:2, each = 3), value = 1:6
)
variables <- list(a = a, b = b)
bi_write(filename, variables)
bi_file_summary(filename)</pre>
```

enable_outputs

Description

Any variable type given will have any 'has_output=0' option removed in the given model.

Usage

```
enable_outputs(x, type = "all")
```

Arguments

х	a bi_model object
type	either "all" (default), or a vector of variable types that are to have outputs enabled

Value

the updated bi_model object

See Also

bi_model

Examples

```
model_file_name <- system.file(package = "rbi", "PZ.bi")
PZ <- bi_model(filename = model_file_name)
PZ[6] <- "param mu (has_output=0)"
PZ <- enable_outputs(PZ)</pre>
```

Equals.bi_model Check if two models are equal

Description

Ignores differences in the model name.

Usage

S3 method for class 'bi_model'
e1 == e2, ...

Extract.bi_model

Arguments

e1	a bi_model
e2	abi_model
	ignored

Value

TRUE or FALSE, depending on whether the models are equal or not

Examples

```
model_file_name <- system.file(package = "rbi", "PZ.bi")
PZ <- bi_model(filename = model_file_name)
PZ == PZ # TRUE</pre>
```

Extract.bi_model Subset model lines

Description

Extracts a subset of lines from the model.

Usage

S3 method for class 'bi_model'
x[i, ...]

Arguments

х	A bi_model
i	A vector of line numbers
	ignored

Value

a character string of the extracted model lines(s)

Examples

```
model_file_name <- system.file(package = "rbi", "PZ.bi")
PZ <- bi_model(filename = model_file_name)
PZ[3:4]</pre>
```

Extract_assign.bi_model

Subset and replace model lines

Description

Extracts a subset of lines from the model and assigns new character strings.

Usage

S3 replacement method for class 'bi_model'
x[i, ...] <- value</pre>

Arguments

Х	A bi_model
i	A vector of line numbers
	ignored
value	A vector of the same length as i, containing the replacement strings

Value

the updated bi_model object

Examples

```
model_file_name <- system.file(package = "rbi", "PZ.bi")
PZ <- bi_model(filename = model_file_name)
PZ[3:4] <- c("const e = 0.4", "const m_l = 0.05")</pre>
```

extract_sample	<i>Extract a sample from a</i> LibBi <i>run</i> .

Description

This function takes the provided libbi results and extracts a data frame.

```
extract_sample(x, np, ...)
```

filter

Arguments

x	a libbi object which has been run, or a list of data frames containing parameter traces (as returned by from bi_read)
np	iteration to extract; if set to "last", the last sample will be extracted. If not given a random sample will be extracted
	parameters to bi_read (e.g., dimensions)

Value

a list of data frames or numeric vectors containing parameters and trajectories

filter

Using the LibBi wrapper to filter

Description

The method filter launches libbi to filter state trajectories. See the options to run.libbi for how to specify the various components of sampling with LibBi, and the LibBi manual for all options that can be passed when the client is filter.

If x is given as a 'bi_model', a libbi object will be created from the model For the help page of the base R filter function, see filter.

Usage

```
## S3 method for class 'libbi'
filter(x, ...)
## S3 method for class 'bi_model'
```

filter(x, ...)

Arguments

х	a libbi or bi_model object, or the name of a file containing the model
	options to be passed to run.libbi

Value

an updated libbi object

Description

Replaces all variables with fixed values as given ; note that this will not replace differential equations and lead to an error if applied to states that are changed inside an "ode" block

For the help page of the base R fix function, see fix.

Usage

S3 method for class 'bi_model'
fix(x, ...)

Arguments

х	a bi_model object
	values to be assigned to the (named) variables

Value

the updated bi_model object

See Also

bi_model

Examples

```
model_file_name <- system.file(package = "rbi", "PZ.bi")
PZ <- bi_model(filename = model_file_name)
PZ <- fix(PZ, alpha = 0)</pre>
```

flatten	Flatten list of data frames This function takes a list of data frames
	(such as, for example, returned by bi_read) and converts it to a flat
	data frame

Description

Flatten list of data frames This function takes a list of data frames (such as, for example, returned by bi_read) and converts it to a flat data frame

Usage

flatten(x)

generate_dataset

Arguments

х

The list of data frames

Value

a data frame containing the flattened data

generate_dataset Generate Dataset

Description

This is a wrapper around libbi sample --target joint --nsamples 1, to generate a synthetic dataset from a model. Parameters can be passed via the 'init' option (see run.libbi, otherwise they are generated from the prior specified in the model. The end time should be specified using the "end_time" option. If this is not given, only a parameter set is sampled. Use the 'noutputs' or 'output_every' options to control the number of data points being generated. By default, output_every is set to 1.

Usage

generate_dataset(..., output_every = 1)

Arguments

	arguments to be passed to sample.libbi, especially 'model', 'end_time' and 'seed'.
output_every	real; if given, noutputs will be set so that there is output every output_every time steps; if set to 0, only generate an output at the final time

Value

a libbi object, the generated data set

	h 1 1 -	
get_	block	

Get the contents of a block in a LibBi model

Description

Returns the contents of a block in a LibBi model as a character vector of lines.

```
## S3 method for class 'bi_model'
get_block(x, name, shell = FALSE, ...)
```

get_dims

Arguments

х	a bi_model object
name	name of the block
shell	if TRUE (default:FALSE), will return the shell (i.e., the definition of the block) as well as content; this is useful, e.g., to see options passed to a transition or ode block
•••	ignored

Value

a character vector of the lines in the block

get_const

Get constants in a LibBi model

Description

Get constants contained in a LibBi model and their values. This will attempt to evaluate any calculation on the right hand side. Failing that, it will be returned verbatim.

Usage

```
get_const(model)
```

Arguments

model a bi_model object

Value

a list of constants (as names) and their values

get_dims

Get dimensions in a LibBi model

Description

Get dimensions contained in a LibBi model and their sizes

Usage

get_dims(model, type)

get_name

Arguments

model	a bi_model object
type	a character vector of one or more types

Value

a list of dimensions (as names) and their sizes

get_name

Get the name of a bi model

Description

Extracts the name of a bi model (first line of the .bi file).

Usage

S3 method for class 'bi_model'
get_name(x, ...)

Arguments

Х	a bi_model object
	ignored

Value

a character string, the name of the model

See Also

bi_model

Examples

```
model_file_name <- system.file(package = "rbi", "PZ.bi")
PZ <- bi_model(filename = model_file_name)
get_name(PZ)</pre>
```

get_traces

Description

This function takes the provided **libbi** object which has been run and returns a data frame with the parameter traces.

Usage

get_traces(x, model, burnin, all = FALSE, ...)

Arguments

x	a libbi object which has been run, or a list of data frames containing parameter traces (as returned by bi_read); if it is not a libbi object, either 'all' must be TRUE or a model given
model	a model to get the parameter names from; not needed if 'run' is given as a libbi object or 'all' is set to TRUE
burnin	proportion of iterations to discard as burn-in (if between 0 and 1), or number of samples to discard (if >1)
all	whether all variables in the run file should be considered (otherwise, just parameters)
	parameters to bi_read (e.g., dimensions)

Value

a ata frame with parameter traces; this can be fed to coda routines

insert_lines Insert lines in a LibBi model

Description

Inserts one or more lines into a libbi model. If one of before or after is given, the line(s) will be inserted before or after a given line number or block name, respectively. If one of at_beginning of or at_end_of is given, the lines will be inserted at the beginning/end of the block, respectively.

```
## S3 method for class 'bi_model'
insert_lines(x, lines, before, after, at_beginning_of, at_end_of, ...)
```

join

Arguments

х	a bi_model object
lines	vector or line(s)
before	line number before which to insert line(s)
after	line number after which to insert line(s)
at_beginning_c	f
	block at the beginning of which to insert lines(s)
at_end_of	block at the end of which to insert lines(s)
	ignored

Value

the updated bi_model object

See Also

bi_model

Examples

```
model_file_name <- system.file(package = "rbi", "PZ.bi")
PZ <- bi_model(filename = model_file_name)
PZ <- insert_lines(PZ, lines = "noise beta", after = 8)</pre>
```

join

Join multiple libbi objects

Description

This function can be used to join multiple libbi objects into one (e.g., parallel MCMC runs into one long change)

Usage

S3 method for class 'libbi'
join(x, ...)

Arguments

х	a libbi object
	ignored

Value

an joined libbi object

libbi

Description

libbi allows to call LibBi. Upon creating a new libbi object, the following arguments can be given. Once the instance is created, LibBi can be run through the sample, filter, or optimise, or rewrite methods. Note that libbi objects can be plotted using plot if the rbi.helpers package is loaded.

Usage

```
libbi(model, path_to_libbi, dims, use_cache = TRUE, ...)
```

Arguments

model	either a character vector giving the path to a model file (typically ending in ".bi"), or a bi_model object
path_to_libbi	path to LibBi binary; by default it tries to locate the libbi binary using the which Unix command, after having loaded "~/.bashrc" if present; if unsuccessful it tries "~/PathToBiBin/libbi"; if unsuccessful again it fails.
dims	any named dimensions, as list of character vectors
use_cache	logical; whether to use the cache (default: true)
	options passed to run.libbi

Value

a new libbi object

See Also

sample, filter, optimise, rewrite

Examples

```
bi_object <- libbi(model = system.file(package = "rbi", "PZ.bi"))</pre>
```

logLik

Description

The method logLik extracts the log-likelihood of a libbi object. This can be done, for example, after a call to sample to inspect the chain log-likelihoods.

For the help page of the base R logLik function, see logLik.

Usage

S3 method for class 'libbi'
logLik(object, ...)

Arguments

object	a libbi object
	options to be passed to run.libbi

Value

a vector of log-likelihood

		٠		
0	pt	1	mı	ise

Using the LibBi wrapper to optimise

Description

The method optimise launches libbi to optimise the parameters with respect to the likelihood or posterior distribution. See the options to run.libbi for how to specify the various components of sampling with LibBi, and the LibBi manual for all options that can be passed when the client is optimise.

If x is given as a 'bi_model', a libbi object will be created from the model For the help page of the base R optimise function, see optimise.

```
## S3 method for class 'libbi'
optimise(x, ...)
## S3 method for class 'bi_model'
optimise(x, ...)
```

Arguments

x a libbi or link{bi_model} object, or the name of a file containing the model... options to be passed to run.libbi

Value

an updated libbi object

predict

Using the LibBi wrapper to predict

Description

The method predict is an alias for sample(target="prediction"). Usually, an init object or file should be given containing posterior samples.

For the help page of the base R optimise function, see optimise.

Usage

S3 method for class 'libbi'
predict(x, ...)

Arguments

х	a libbi object
	any arguments to be passed to sample

Value

an updated libbi object

print_log

Print the log file a libbi object

Description

This is useful for diagnosis after a libbi run

Usage

print_log(x)

Arguments

Х

a libbi object, or the name of the log file of a libbi run.

read_libbi

Value

nothing (invisible NULL)

read_libbi	Read results of a LibBi run from an RDS file or from a folder. This
	completely reconstructs the saved LibBi object

Description

This reads all options, files and outputs of a LibBi run from a specified RDS file or folder (if split = TRUE has been used with save_libbi).

Usage

read_libbi(name, ...)

Arguments

name	name of the RDS file(s) to read
	any extra options to pass to libbi when creating the new object

Value

a new libbi object

remove_lines

Remove line(s) and/or block(s) in a libbi model

Description

Removes one or more lines in a libbi model.

```
## S3 method for class 'bi_model'
remove_lines(
    x,
    what,
    only,
    type = c("all", "assignment", "sample"),
    preserve_shell = FALSE,
    ...
)
```

Arguments

х	a bi_model object
what	either a vector of line number(s) to remove, or a vector of blocks to remove (e.g., "parameter")
only	only remove lines assigning given names (as a vector of character strings)
type	which types of lines to remove, either "all", "sample" (i.e., lines with a "~") or "assignment" (lines with a "<-" or "=") (default: "all")
preserve_shell	if TRUE (default: FALSE), preserve the definition of a block even if all lines are removed; this is useful to preserve options passed to a transition or ode block
	ignored

Value

the updated bi_model object

See Also

bi_model

Examples

```
model_file_name <- system.file(package = "rbi", "PZ.bi")
PZ <- bi_model(filename = model_file_name)
PZ <- remove_lines(PZ, 2)</pre>
```

remove_vars Remove variables

Description

Removes variables from the left-hand side of a model Used by fix and to_input

Usage

remove_vars(x, vars)

Arguments

х	a bi_model object
vars	vector of variables to remove

Value

a bi model object of the new model the updated bi_model object

replace_all

See Also

bi_model

replace_all

Replace all instances of a string with another in a model

Description

Takes every occurrence of one string and replaces it with another

Usage

S3 method for class 'bi_model'
replace_all(x, from, to, ...)

Arguments

х	a bi_model object
from	string to be replaced (a regular expression)
to	new string (which can refer to the regular expression given as from)
	ignored

Value

the updated bi_model object

See Also

bi_model

rewrite

Using the LibBi wrapper to rewrite

Description

The method rewrite launches LibBi to rewrite a model to inspect its internal representation in LibBi

If x is given as a 'bi_model', a libbi object will be created from the model

```
## S3 method for class 'libbi'
rewrite(x, ...)
## S3 method for class 'bi_model'
rewrite(x, ...)
```

Arguments

х	a libbi or bi_model object, or the name of a file containing the model
	options to be passed to run.libbi

Value

a re-written bi_model object

run

Using the LibBi wrapper to launch LibBi

Description

The method run launches LibBi with a particular set of command line arguments. Normally, this function would not be run by the user, but instead one of the client functions sample, filter, or optimise, or rewrite, which pass any options on to run. Note that any options specified here are stored in the libbi object and do not have to be specified again if another command is run on the object.

```
## S3 method for class 'libbi'
run(
 х,
  client,
  proposal = c("model", "prior"),
 model,
  fix,
  config,
  log_file_name = character(0),
  init,
  input,
  obs,
  time_dim = character(0),
  coord_dims = list(),
  thin,
  output_every,
  chain = TRUE,
  seed = TRUE,
  debug = FALSE,
  . . .
)
```

run

Arguments

x	a libbi object; if this is not given, an empty libbi object will be created
client	client to pass to LibBi
proposal	proposal distribution to use; either "model" (default: proposal distribution in the model) or "prior" (propose from the prior distribution)
model	either a character vector giving the path to a model file (typically ending in ".bi"), or a bi_model object; by default, will use any model given in x
fix	any variable to fix, as a named vector
config	path to a configuration file, containing multiple arguments
log_file_name	path to a file to text file to report the output of LibBi; if set to an empty vector (character(0)) or an empty string (""), which is the default, a temporary log file will be generated
init	initialisation of the model, either supplied as a list of values and/or data frames, or a (netcdf) file name, or a libbi object which has been run (in which case the output of that run is used). If the object given as x has been run before, it will be used here with init-np set to the last iteration of the previous run, unless init is given explicitly.
input	input of the model, either supplied as a list of values and/or data frames, or a (netcdf) file name, or a libbi object which has been run (in which case the output of that run is used as input)
obs	observations of the model, either supplied as a list of values and/or data frames, or a (netcdf) file name, or a libbi object which has been run (in which case the output of that run is used as observations)
time_dim	The time dimension in any R objects that have been passed (init, input) and obs); if NULL (default), will be guessed from the given observation
coord_dims	The coord dimension(s) in any obs R objects that have been passed; if NULL (default), will be guessed from the given observation file given
thin	any thinning of MCMC chains (1 means all will be kept, 2 skips every other sample etc.); note that LibBi itself will write all data to the disk. Only when the results are read in with bi_read will thinning be applied.
output_every	real; if given, noutputs will be set so that there is output every output_every time steps; if set to 0, only generate an output at the final time
chain	logical; if set to TRUE and x has been run before, the previous output file will be used as init file, and init-np will be set to the last iteration of the previous run (unless target=="prediction"). This is useful for running inference chains.
seed	Either a number (the seed to supply to LibBi), or a logical variable: TRUE if a seed is to be generated for RBi, FALSE if LibBi is to generate its own seed
debug	logical; if TRUE, print more verbose messages and write all variables to the output file, irrespective of their setting of 'has_output'
	list of additional arguments to pass to the call to LibBi. Any arguments start- ing with 'enable'/'disable' can be specified as boolean (e.g., 'assert=TRUE' or 'cuda=TRUE'). Any 'dry-' options can be specified with a '"dry"' argument, e.g., 'dry="parse"'. Any options that would be specified with 'with'/'without' can be specified as character vector to an option named 'with'/'without', respec- tively, e.g. with="transform-obs-to-state".

Value

an updated libbi object, except if client is 'rewrite', in which case invisible NULL will be returned but the rewritten model code printed

See Also

libbi

sample

Using the LibBi wrapper to sample

Description

The method sample launches libbi to sample from a (prior, posterior or joint) distribution. See the options to run.libbi for how to specify the various components of sampling with LibBi, and the LibBi manual for all options that can be passed when the client is sample.

If x is given as a 'bi_model', a libbi object will be created from the model For the help page of the base R sample function, see sample.

Usage

S3 method for class 'libbi'
sample(x, ...)
S3 method for class 'bi_model'
sample(x, ...)

Arguments

х	a libbi or bi_model object, or the name of a file containing the model
	options to be passed to run.libbi

Value

an updated libbi object

sample_obs

Description

Sample observations from a LibBi model that has been run

Usage

sample_obs(x, ...)

Arguments

х	a libbi object
	any options to pass to LibBi

Value

the original libbi object with added variables in the output file for sampled observations

Author(s)

Sebastian Funk

save_libbi Write results of a LibBi run to an RDS file

Description

This saves all options, files and outputs of a LibBi run to an RDS file specified

Usage

```
## S3 method for class 'libbi'
save_libbi(x, name, supplement, split = FALSE, ...)
```

Arguments

Х	a libbi object
name	name of the RDS file(s) to save to. If split=TRUE, this will be taken as a base for the names of the files to be created, e.g. 'dir/name.rds' to create files of the form namerds in directory 'dir'.
supplement	any supplementary data to save
split	Logical, defaults to FALSE. Should the objects from the LibBi run be saved separately in a folder.
	any options to saveRDS

the return value of saveRDS, i.e. NULL invisibly

set_name

Set the name of a bi model

Description

Changes the name of a bi model (first line of the .bi file) to the specified name.

Usage

S3 method for class 'bi_model'
set_name(x, name, ...)

Arguments

х	a bi_model object
name	Name of the model
	ignored

Value

the updated bi_model object

See Also

bi_model

Examples

```
model_file_name <- system.file(package = "rbi", "PZ.bi")
PZ <- bi_model(filename = model_file_name)
PZ <- set_name(PZ, "new_PZ")</pre>
```

simulate

Description

The method simulate launches LibBi to simulate a model by passing 'target="joint"' to LibBi If x is given as a 'bi_model', a libbi object will be created from the model

Usage

```
## S3 method for class 'libbi'
simulate(x, ...)
## S3 method for class 'bi_model'
simulate(x, ...)
```

Arguments

х	a libbi or bi_model object, or the name of a file containing the model
	options to be passed to run.libbi

Value

an updated bi_model object

summary

Print summary information about a libbi object

Description

This reads in the output file of the libbi object (which has been run before) and prints summary information of parameters

```
## S3 method for class 'libbi'
summary(
   object,
   type = c("param", "state", "noise", "obs"),
   quantiles = c(0.25, 0.75),
   na.rm = FALSE,
   ...
)
```

Arguments

object	a libbi object
type	one of "param" (default), "state", "noise" or "obs", the variable type to summarise
quantiles	quantiles to calculate (default: quartiles); minimum, median, mean and maxi- mum are always calculated
na.rm	logical; if true, any na and NaN's are removed before calculations are performed
	ignored

Value

nothing (invisible NULL)

Unequals.bi_model Check if two models are unequal

Description

Ignores differences in the model name.

Usage

S3 method for class 'bi_model'
e1 != e2, ...

Arguments

e1	abi_model
e2	abi_model
	ignored

Value

TRUE or FALSE, depending on whether the models are equal or not

Examples

```
model_file_name <- system.file(package = "rbi", "PZ.bi")
PZ <- bi_model(filename = model_file_name)
PZ != PZ # FALSE</pre>
```

update

Description

This updates all the time stamps in a libbi object; it is useful after (input, output, etc.) files have been changed outside the object itself.

Usage

S3 method for class 'libbi'
update(x, ...)

Arguments

х	a libbi object
	ignored

Value

a libbi object with updated timestamps

var_names

Get variable names in a LibBi model

Description

Get variable names of one or more type(s)

This returns all variable names of a certain type ("param", "state", "obs", "noise", "const") contained in the model of a libbi object

Usage

```
var_names(x, vars, type, dim = FALSE, opt = FALSE, aux = FALSE)
```

Arguments

х	a bi_model object
vars	a character vector of variable names; if given, only these variables names will be considered
type	a character vector of one or more types
dim	logical; if set to TRUE, names will contain dimensions in brackets
opt	logical; if set to TRUE, names will contain options (e.g., has_output)
aux	logical; if set to TRUE, auxiliary names will be returned

Value

a character vector of variable names

write_model Writes a bi model to a file.

Description

Writes a bi model to a file given by filename. The extension '.bi' will be added if necessary.

Usage

```
## S3 method for class 'bi_model'
write_model(x, filename, update.name = TRUE, ...)
## S3 method for class 'libbi'
write_model(x, filename, ...)
```

Arguments

х	a bi_model object, or a libbi object containing a model
filename	name of the file to be written
update.name	whether to update the model name with the file name
	ignored

Value

the return value of the writeLines call.
