

# Package ‘safetyCharts’

October 14, 2022

**Title** Charts for Monitoring Clinical Trial Safety

**Version** 0.3.0

**Maintainer** Jeremy Wildfire <jwildfire@gmail.com>

**Description** Contains chart code for monitoring clinical trial safety. Charts can be used as stand-alone output, but are also designed for use with the 'safetyGraphics' package, which makes it easy to load data and customize the charts using an interactive web-based interface created with Shiny.

**URL** <https://github.com/SafetyGraphics/safetyCharts>

**BugReports** <https://github.com/SafetyGraphics/safetyCharts/issues>

**License** MIT + file LICENSE

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 7.1.2

**Imports** dplyr, DT,forcats, ggplot2, htmlwidgets, huxtable, jsonlite, pharmaRTF, plotly, purrr, RColorBrewer, rlang, shiny, stringr, Tendril, Tplyr

**Suggests** testthat, shinytest, safetyData, safetyGraphics, yaml

**Depends** R (>= 4.0)

**NeedsCompilation** no

**Author** Jeremy Wildfire [aut, cre]

**Repository** CRAN

**Date/Publication** 2022-03-22 20:00:02 UTC

**Index****21**

---

`demogRTF_server`      *Demographics Table RTF - UI*

---

**Description**

Demographics Table RTF - UI

**Usage**

```
demogRTF_server(input, output, session, params)
```

**Arguments**

input	module input
output	module output
session	module session
params	parameters object with data and settings options.

**Value**

returns shiny module Server function

---

demogRTF\_table      *create demographics RTF table*

---

### Description

create demographics RTF table

### Usage

```
demogRTF_table(data, settings)
```

### Arguments

data	demographics data frame with columns specified in settings object
settings	list with parameters specifying the column names for: <ul style="list-style-type: none"><li>• sex (settings\$sex_col),</li><li>• race (settings\$race_col)</li><li>• age (settings\$age_Col)</li></ul>

### Value

rtf doc object

### Examples

```
settings <- list(treatment_col = "ARM", sex_col = "SEX", race_col = "RACE", age_col = "AGE")
demogRTF_table(safetyData::sdtm_dm, settings)
```

---

---

demogRTF\_ui      *Demographics Table RTF - UI*

---

### Description

Demographics Table RTF - UI

### Usage

```
demogRTF_ui(id)
```

### Arguments

id	module id
----	-----------

### Value

returns shiny module UI

**hepExplorer***Make standalone hepExplorer html widget***Description**

Convience mapping of render\_widget for hepExplorer.

**Usage**

```
hepExplorer(df = safetyData::adam_adlbc, mapping = NULL, ...)
```

**Arguments**

<code>df</code>	data frame containing lab data used to render for hepExplorer. Default is <code>safetyData::adam_adlbc</code> .
<code>mapping</code>	named list with the current data mappings. See details for default mapping.
<code>...</code>	additional options to be added to mapping. Will overwrite mapping.

**Details**

The `data` and `mapping` should match the specs described in the `hepExplorer` javascript library. Items passed in `...` are added to `mapping`, and then the list is converted to json via `jsonlite::toJSON(mapping, auto_unbox=TRUE, null="null")`.

The default mapping shown below is designed to work with data in the CDISC ADaM format (like `safetydata::adam_adlbc`).

```
mapping <- list(
  measure_col = "PARAM",
  measure_values = list(
    ALT = "Alanine Aminotransferase (U/L)",
    AST = "Aspartate Aminotransferase (U/L)",
    TB = "Bilirubin (umol/L)",
    ALP = "Alkaline Phosphatase (U/L)"
  ),
  id_col = "USUBJID",
  value_col = "AVAL",
  normal_col_low = "A1LO",
  normal_col_high = "A1HI",
  studyday_col = "ADY",
  visit_col = "VISIT",
  visitn_col = "VISITNUM"
)
```

Parameters that are not included in the default mapping can be accessed via `...`; Key options and defaults for `safetyData::adam_adlbc` shown below:

- `filters`: list of columns to be included as data filters (e.g. `'filters=c("SEX","AGEGR1")'`)

- group\_cols: list of columns used to define grouping and set point color (e.g. ‘filters=c("SEX","AGEGR1")’)
- x\_options and y\_options - specify which labs can be used for x and y axis dropdowns. By default, all options are included on x-axis, but only Bilirubin is shown on y-axis. To allow an interactive y-axis, use y\_options="all".
- baseline - flag defining the baseline visit for each participant. baseline must be provided to enable the mDish view on the hep-explorer chart. Define as a list with value\_col and values (e.g. baseline=list(value\_col="ABLFL",values="Y"))
- title and warningText - Strings used to define the header text shown above the filters.

For more options see the [full specs](#) in the javascript library.

## Examples

```
## Not run:
# Render widget with defaults
hepExplorer()

# Add age group to default
hepExplorer(group_cols=c("SEX", "AGEGR1"))

# Enable interactive y-axis
hepExplorer(y_options='all')

# Use custom mapping for SDTM data
hepExplorer(
  df=safetyData::sdtm_lb,
  measure_col = "LBTEST",
  measure_values = list(
    ALT = "Alanine Aminotransferase",
    AST = "Aspartate Aminotransferase",
    TB = "Bilirubin",
    ALP = "Alkaline Phosphatase"
  ),
  id_col = "USUBJID",
  value_col = "LBSTRESN",
  normal_col_low = "LBORNRL0",
  normal_col_high = "LBORNRI",
  studyday_col = "LBDY",
  visit_col = "VISIT",
  visitn_col = "VISITNUM"
)
## End(Not run)
```

**Description**

Initialize Settings for Adverse Event Explorer widget

**Usage**

```
init_aeExplorer(data, settings)
```

**Arguments**

data	labs data structured as one record per person per visit per measurement. See details for column requirements.
settings	named list of settings

**Value**

returns list with data and settings

---

**init\_aeTimelines**      *Initialize Settings for AE Timeline widget*

---

**Description**

Initialize Settings for AE Timeline widget

**Usage**

```
init_aeTimelines(data, settings)
```

**Arguments**

data	labs data structured as one record per person per visit per measurement. See details for column requirements.
settings	named list of settings

**Value**

returns list with data and settings

---

```
init_paneledOutlierExplorer
```

*Initialize Settings for Paneled Outlier Explorer widget*

---

## Description

Initialize Settings for Paneled Outlier Explorer widget

## Usage

```
init_paneledOutlierExplorer(data, settings)
```

## Arguments

data	labs data structured as one record per person per visit per measurement. See details for column requirements.
settings	named list of settings

## Value

returns list with data and settings

---

---

```
init_safetyOutlierExplorer
```

*Initialize Settings for Safety Outlier Explorer widget*

---

## Description

Initialize Settings for Safety Outlier Explorer widget

## Usage

```
init_safetyOutlierExplorer(data, settings)
```

## Arguments

data	labs data structured as one record per person per visit per measurement. See details for column requirements.
settings	named list of settings

## Value

returns list with data and settings

---

```
init_safetyResultsOverTime
```

*Initialize Settings for Safety Results Over Time widget*

---

### Description

Initialize Settings for Safety Results Over Time widget

### Usage

```
init_safetyResultsOverTime(data, settings)
```

### Arguments

data	labs data structured as one record per person per visit per measurement. See details for column requirements.
settings	named list of settings

### Value

returns list with data and settings

---

```
init_safetyShiftPlot  Initialize Settings for Safety Shift Plot widget
```

---

### Description

Initialize Settings for Safety Shift Plot widget

### Usage

```
init_safetyShiftPlot(data, settings)
```

### Arguments

data	labs data structured as one record per person per visit per measurement. See details for column requirements.
settings	named list of settings

### Value

returns list with data and settings

---

**lab\_distribution\_server**  
*lab distribution Module - Server*

---

**Description**

A simple server for a shiny module looking at lab histograms. Intended primarily for technical demos.

**Usage**

```
lab_distribution_server(input, output, session, params)
```

**Arguments**

input	module input
output	module output
session	module session
params	parameters object with data and settings options.

**Value**

returns shiny module Server function

---

**lab\_distribution\_ui**    *Lab distribution Module - UI*

---

**Description**

A simple UI for a shiny module looking at lab histograms. Intended primarily for technical demos.

**Usage**

```
lab_distribution_ui(id)
```

**Arguments**

id	module id
----	-----------

**Value**

returns shiny module UI

---

**meta\_aes**

*Metadata data frame containing information about the data mapping used to configure safetyGraphics charts for the ae domain. One record per unique data mapping*

---

### Description

Metadata data frame containing information about the data mapping used to configure safetyGraphics charts for the ae domain. One record per unique data mapping

### Usage

```
meta_aes
```

### Format

A data frame with X rows and 10 columns

**domain** Data domain

**text\_key** Text key indicating the setting name. '--' delimiter indicates a field level data mapping

**col\_key** Key for the column mapping

**field\_key** Key for the field mapping (if any)

**type** type of mapping - "field" or "column"

**label** Label

**description** Description

**multiple** Mapping supports multiple columns/fields

**standard\_adam** Default values for the ADaM data standard

**standard\_sdtm** Default values for the SDTM data standard

### Source

Created for this package

---

**meta\_dm**

*Metadata data frame containing information about the data mapping used to configure safetyGraphics charts for the dm domain. One record per unique data mapping*

---

### Description

Metadata data frame containing information about the data mapping used to configure safetyGraphics charts for the dm domain. One record per unique data mapping

**Usage**

```
meta_dm
```

**Format**

A data frame with X rows and 10 columns

**domain** Data domain

**text\_key** Text key indicating the setting name. '--' delimiter indicates a field level data mapping

**col\_key** Key for the column mapping

**field\_key** Key for the field mapping (if any)

**type** type of mapping - "field" or "column"

**label** Label

**description** Description

**multiple** Mapping supports multiple columns/fields

**standard\_adam** Default values for the ADaM data standard

**standard\_sdtm** Default values for the SDTM data standard

**Source**

Created for this package

---

meta\_ecg

*Metadata data frame containing information about the data mapping used to configure safetyGraphics charts for the ecg domain. One record per unique data mapping*

---

**Description**

Metadata data frame containing information about the data mapping used to configure safetyGraphics charts for the ecg domain. One record per unique data mapping

**Usage**

```
meta_ecg
```

**Format**

A data frame with 22 rows and 10 columns

**domain** Data domain

**text\_key** Text key indicating the setting name. '--' delimiter indicates a field level data mapping

**col\_key** Key for the column mapping

**field\_key** Key for the field mapping (if any)

**type** type of mapping - "field" or "column"  
**label** Label  
**description** Description  
**multiple** Mapping supports multiple columns/fields  
**standard\_adam** Default values for the ADaM data standard  
**standard\_sdtm** Default values for the SDTM data standard

### Source

Created for this package

<code>meta_hepExplorer</code>	<i>Metadata data frame containing information about the data mapping used to configure safetyGraphics for the hepExplorer Chart. One record per unique data mapping</i>
-------------------------------	---

### Description

Metadata data frame containing information about the data mapping used to configure safetyGraphics for the hepExplorer Chart. One record per unique data mapping

### Usage

`meta_hepExplorer`

### Format

A data frame with X rows and 10 columns

**domain** Data domain  
**text\_key** Text key indicating the setting name. '--' delimiter indicates a field level data mapping  
**col\_key** Key for the column mapping  
**field\_key** Key for the field mapping (if any)  
**type** type of mapping - "field" or "column"  
**label** Label  
**description** Description  
**multiple** Mapping supports multiple columns/fields  
**standard\_adam** Default values for the ADaM data standard  
**standard\_sdtm** Default values for the SDTM data standard

### Source

Created for this package

---

meta_labs	<i>Metadata data frame containing information about the data mapping used to configure safetyGraphics charts for the labs domain. One record per unique data mapping</i>
-----------	--

---

### Description

Metadata data frame containing information about the data mapping used to configure safetyGraphics charts for the labs domain. One record per unique data mapping

### Usage

```
meta_labs
```

### Format

A data frame with X rows and 10 columns

**domain** Data domain

**text\_key** Text key indicating the setting name. '--' delimiter indicates a field level data mapping

**col\_key** Key for the column mapping

**field\_key** Key for the field mapping (if any)

**type** type of mapping - "field" or "column"

**label** Label

**description** Description

**multiple** Mapping supports multiple columns/fields

**standard\_adam** Default values for the ADaM data standard

**standard\_sdtm** Default values for the SDTM data standard

QT\_OutlierExplorer\_server

*QT Outlier Explorer Module - UI*

---

### Description

QT Outlier Explorer Module - UI

### Usage

```
QT_OutlierExplorer_server(input, output, session, params)
```

**Arguments**

input	module input
output	module output
session	module session
params	parameters object with data and settings options.

**Value**

returns shiny module Server function

---

`QT_OutlierExplorer_ui` *QT Outlier Explorer Module - UI*

---

**Description**

QT Outlier Explorer Module - UI

**Usage**

`QT_OutlierExplorer_ui(id)`

**Arguments**

id	module id
----	-----------

**Value**

returns shiny module UI

---

`QT_Outlier_Explorer` *QT Outlier Explorer*

---

**Description**

QT Outlier Explorer

**Usage**

`QT_Outlier_Explorer(data, settings)`

**Arguments**

data	ECG data structured as one record per person per visit per measurement. See details for column requirements.
settings	named list of settings with the parameters specified below.

## Details

The settings object provides details the columns in the data set.

- "id\_col"ID column
- "value\_col"Value column
- "measure\_col"Measure column
- "measure\_values"Measure values
- "visit\_col"Visit column
- "visitn\_col"Visit number column (numeric)
- "baseline\_flag\_colBaseline flag column
- "baseline\_flag\_valuesBaseline flag value

## Value

returns a chart object

---

render\_widget

*Render an htmlwidget using standard safetyGraphics workflow*

---

## Description

Render an htmlwidget using standard safetyGraphics workflow

## Usage

```
render_widget(widgetName, data, mapping)
```

## Arguments

widgetName	name of the widget saved in safetyCharts
data	named list of current data sets
mapping	named list with the current data mappings

---

```
safetyOutlierExplorer_server
```

*Safety Outlier Explorer Module - UI*

---

### Description

Safety Outlier Explorer Module - UI

### Usage

```
safetyOutlierExplorer_server(input, output, session, params)
```

### Arguments

input	module input
output	module output
session	module session
params	parameters object with data and settings options.

### Value

returns shiny module Server function

---

```
safetyOutlierExplorer_ui
```

*Safety Outlier Explorer Module - UI*

---

### Description

Safety Outlier Explorer Module - UI

### Usage

```
safetyOutlierExplorer_ui(id)
```

### Arguments

id	module id
----	-----------

### Value

returns shiny module UI

---

safety\_outlier\_explorer  
*Safety Outlier Explorer*

---

**Description**

Safety Outlier Explorer

**Usage**

```
safety_outlier_explorer(data, settings)
```

**Arguments**

data	labs data structured as one record per person per visit per measurement. See details for column requirements.
settings	named list of settings with the parameters specified below.

**Details**

The settings object provides details the columns in the data set.

- "id\_col"ID column
- "value\_col"Value column
- "measure\_col"Measure column
- "measure\_values"Measure values
- "studyday\_col"Study Day (numeric)

**Value**

returns a chart object

**Examples**

```
settings <- list(  
  id_col = "USUBJID",  
  measure_col = "LBTEST",  
  measure_values = c("Albumin", "Bilirubin", "Chloride"),  
  studyday_col = "VISITDY",  
  value_col = "LBORRES"  
)  
safety_outlier_explorer(safetyData::sdm_lb, settings)
```

---

**safety\_results\_over\_time**  
*Safety Results Over Time plot*

---

## Description

Safety Results Over Time plot

## Usage

```
safety_results_over_time(data, settings)
```

## Arguments

- |          |   |
|----------|---|
| data     | labs data structured as one record per person per visit per measurement. See details for column requirements. |
| settings | named list of settings with the parameters specified below.   |

## Details

The settings object provides details the columns in the data set.

- "value\_col"Value column
- "measure\_col"Measure column
- "measure\_values"Measure values
- "visit\_col"Study Visit
- "visitn\_col"Study Number
- "group\_col"Grouping column
- "violins"Show Violin plots?
- "boxplots"Show Box Plots?
- "axis"set to "log" to use a log transformed axis, linear otherwise
- "drop\_visit\_string"Drop visits that contain this string. e.g. "unscheduled"

## Value

returns a chart object

## Examples

```
library(dplyr)
lb <- safetyData::sdtm_lb
sub_ids <- unique(lb$USUBJID)[1:100]
lb<-lb %>% filter(USUBJID %in% sub_ids)
settings <- list(
  value_col = "LBORRES",
```

```

measure_col = "LBTEST",
measure_values = c("Chloride"),
visit_col = "VISIT",
visitn_col = "VISITNUM",
axis = "log"
)
safety_results_over_time(lb, settings)

# remove unscheduled visits, add violin plot and 2nd panel
settings$drop_visit_string <- "unscheduled"
settings$violins <- TRUE
settings$measure_values <- c("Albumin")
safety_results_over_time(lb, settings)

# add grouping by treatment
dm_sub <- safetyData::sdtm_dm %>% select(USUBJID, ARM)
dm_lb <- dm_sub %>% left_join(lb)
settings$group_col <- "ARM"
safety_results_over_time(dm_lb, settings)

```

**tendril\_chart***Tendril plot***Description**

Create a plot using the Tendril package

**Usage**

```
tendril_chart(data, settings)
```

**Arguments**

- data** list of data frames including dataframes named `aes` (adverse events) and `dm` (demographics)
- settings** named list of domain-specific settings with the parameters specified below.

**Details**

The settings object provides details regarding the columns in the data sets.

- "settings\$dm\$id\_col"ID column
- "settings\$dm\$treatment\_col"Treatment column
- "settings\$dm\$treatment\_values\_group1"Name of treatment 1
- "settings\$dm\$treatment\_values\_group2"Name of treatment 2
- "settings\$aes\$id\_col"ID column)
- "settings\$aes\$bodsys\_col"Body System
- "settings\$aes\$stdy\_col"Study Day

20

*tendril\_chart*

**Value**

returns a chart object
