

# Package ‘staninside’

July 30, 2025

**Title** Facilitating the Use of 'Stan' Within Packages

**Version** 0.0.4

**Description** Infrastructure and functions that can be used for integrating 'Stan' (Carpenter et al. (2017) <doi:10.18637/jss.v076.i01>) code into stand alone R packages which in turn use the 'CmdStan' engine which is often accessed through 'CmdStanR'. Details given in Stan Development Team (2025) <<https://mc-stan.org/cmdstanr/>>. Using 'CmdStanR' and pre-written 'Stan' code can make package installation easy. Using 'staninside' offers a way to cache user-compiled 'Stan' models in user-specified directories reducing the need to recompile the same model multiple times.

**License** MIT + file LICENSE

**URL** <https://github.com/medewitt/staninside>,  
<https://medewitt.github.io/staninside/>

**BugReports** <https://github.com/medewitt/staninside/issues>

**Encoding** UTF-8

**RoxygenNote** 7.3.2

**Depends** R (>= 3.1)

**Suggests** knitr, covr, spelling, testthat (>= 3.0.0), rmarkdown

**Imports** cli, fs, rappdirs

**Language** en-US

**Config/testthat/edition** 3

**VignetteBuilder** knitr

**NeedsCompilation** no

clear_stan_cache	<i>Clear Stan Cache</i>
------------------	-------------------------

---

### Description

This function clears anything that may exist in the Stan Cache. Most Commonly if you are using the CmdStan backend, you'll have items in your cache.

### Usage

```
clear_stan_cache(pkgname)
```

### Arguments

pkgname	a string, the name of the package
---------	-----------------------------------

### Value

invisible null

### Warning

This will removed cached models and requires that `rappdirs` is installed

---

copy_models	<i>Copy Stan Models</i>
-------------	-------------------------

---

### Description

This function extracts the Stan Code from a Package and then copies it to your user cache locally.

### Usage

```
copy_models(pkgname = "staninside", local_location = NULL)
```

**Arguments**

- `pkgname` a string, the name of the package  
`local_location` a file path representing the desired location of the local copy. If "default" is provided, the function will use the user cache directory for the package.

**Value**

file path of newly created files

**Examples**

```
local_location <- tempdir()  
copy_models(pkgname = "staninside", local_location = local_location)
```

---

`find_stan_code` *Find Stan Code*

---

**Description**

This function looks for Stan code within a given R package and returns a list with the Stan code location within the package and the text of the code,

**Usage**

```
find_stan_code(pkgname = "staninside")
```

**Arguments**

- `pkgname` a string, the name of the package in which to look for the Stan code.

**Value**

a list with the Stan code location within the package and the text of the code,

**Examples**

```
find_stan_code(pkgname = "staninside")
```

---

`setup_stan_package`      *Create Package Infrastructure for Stan Package*

---

## Description

Create directory and helper files for a Stan package using CmdStanR

## Usage

```
setup_stan_package(loc = NULL, use_all = TRUE)
```

## Arguments

<code>loc</code>	a file.path indicating package root.
<code>use_all</code>	a logical indicating if each section of Stan code should have it's own directory with a default of TRUE

## Value

invisible null

## Examples

```
# Create Temporary Directory
temp_dir <- tempdir()

# Now setup the structur
setup_stan_package(loc = temp_dir)

# Examine output

list.files(temp_dir, recursive = TRUE)
```
