

# Package ‘tramnet’

March 10, 2023

**Title** Penalized Transformation Models

**Version** 0.0-8

**Date** 2023-03-10

**URL** <http://ctm.R-forge.R-project.org>

**Description** Partially penalized versions of specific transformation models

implemented in package ‘mlt’. Available models include a fully parametric version of the Cox model, other parametric survival models (Weibull, etc.), models for binary and ordered categorical variables, normal and transformed-normal (Box-Cox type) linear models, and continuous outcome logistic regression. Hyperparameter tuning is facilitated through model-based optimization functionalities from package ‘mlrMBO’.

The accompanying vignette describes the methodology used in ‘tramnet’ in detail.

Transformation models and model-based optimization are described in

Hothorn et al. (2019) <[doi:10.1111/sjos.12291](https://doi.org/10.1111/sjos.12291)> and

Bischl et al. (2016) <[arxiv:1703.03373](https://arxiv.org/abs/1703.03373)>, respectively.

**Depends** R (>= 3.5.0), tram (>= 0.3-2), CVXR (>= 0.99-4), mlrMBO (>= 1.1-2)

**Imports** mlt, basefun, sandwich, ParamHelpers, lhs, mlr, smoof, stats

**Suggests** penalized, TH.data, survival, knitr, mlrbench, colorspace, mvtnorm, glmnet, trtf, Matrix, lattice, kableExtra, coin, tbm, DiceKriging

**VignetteBuilder** knitr

**Encoding** UTF-8

**License** GPL-2

**NeedsCompilation** no

coef.tramnet	<i>coef method for class "tramnet"</i>
--------------	--

---

### Description

coef method for class "tramnet"

### Usage

```
## S3 method for class 'tramnet'
coef(object, with_baseline = FALSE, tol = 1e-06, ...)
```

### Arguments

object	object of class "tramnet"
with_baseline	If TRUE, also prints coefficients for the baseline transformation
tol	tolerance when an estimate should be considered 0 and not returned (default: 1e-6)
...	Additional arguments to coef

**Value**

Numeric vector containing the model shift parameter estimates

**Author(s)**

Torsten Hothorn, Lucas Kook

**coef.tramnet\_Lm**      *coef method for class "tramnet\_Lm"*

**Description**

coef method for class "tramnet\_Lm"

**Usage**

```
## S3 method for class 'tramnet_Lm'
coef(object, with_baseline = FALSE, tol = 1e-06,
     as.lm = FALSE, ...)
```

**Arguments**

object	object of class "tramnet_Lm"
with_baseline	If TRUE, also prints coefficients for the baseline transformation
tol	tolerance when an estimate should be considered 0 and not returned (default: 1e-6)
as.lm	If TRUE parameters are rescaled to the usual parametrization of lm
...	Additional arguments to coef

**Value**

Numeric vector containing the linear model shift parameter estimates

**Author(s)**

Torsten Hothorn, Lucas Kook

**Examples**

```
data(cars)
m0 <- Lm(dist ~ 1, data = cars)
x <- as.matrix(cars[, "speed", drop = FALSE])
mt <- tramnet(m0, x = x, alpha = 0, lambda = 0, check_dcp = FALSE)
coef(mt)
coef(mt, with_baseline = TRUE)
coef(mt, as.lm = TRUE)
coef(lm(dist ~ speed, data = cars))
```

---

cvl_tramnet	<i>Cross validation for "tramnet" models</i>
-------------	--

---

## Description

k-fold cross validation for "tramnet" objects over a grid of the tuning parameters based on out-of-sample log-likelihood.

## Usage

```
cvl_tramnet(object, fold = 2, lambda = 0, alpha = 0, folds = NULL,
            fit_opt = FALSE)
```

## Arguments

object	object of class "tramnet"
fold	number of folds for cross validation
lambda	values for lambda to iterate over
alpha	values for alpha to iterate over
folds	manually specify folds for comparison with other methods
fit_opt	If TRUE, returns the full model evaluated at optimal hyper parameters

## Value

Returns out-of-sample logLik and coefficient estimates for corresponding folds and values of the hyperparameters as an object of class "cvl\_tramnet"

## Author(s)

Lucas Kook

## Examples

```
set.seed(241068)
if (require("survival") & require("TH.data")) {
  data("GBSG2", package = "TH.data")
  X <- 1 * matrix(GBSG2$horTh == "yes", ncol = 1)
  colnames(X) <- "horThyes"
  GBSG2$surv <- with(GBSG2, Surv(time, cens))
  m <- Coxph(surv ~ 1, data = GBSG2, log_first = TRUE)
  mt <- tramnet(model = m, x = X, lambda = 0, alpha = 0)
  mc <- Coxph(surv ~ horTh, data = GBSG2)
  cvl_tramnet(mt, fold = 2, lambda = c(0, 1), alpha = c(0, 1))
}
```

---

elnet\_obj*Elastic net objective function for model based optimization*

---

**Description**

This function generates an objective function for model-based optimization based on the cross-validated log-likelihood of a `tramnet` model with an elastic net penalty. It is not intended to be called by the user directly, instead it will be given as an argument to `mbo_tramnet`.

**Usage**

```
elnet_obj(object, minlambda = 0, maxlambda = 16, minalpha = 0,
          maxalpha = 1, folds, noisy = FALSE, fold)
```

**Arguments**

<code>object</code>	object of class <code>tramnet</code>
<code>minlambda</code>	minimum value for lambda (default: 0)
<code>maxlambda</code>	maximum value for lambda (default: 16)
<code>minalpha</code>	minimum value for alpha (default: 0)
<code>maxalpha</code>	maximum value for alpha (default: 1)
<code>folds</code>	self specified folds for cross validation (mainly for reproducibility and comparability purposes)
<code>noisy</code>	indicates whether folds for k-fold cross-validation should be random for each iteration, leading to a noisy objective function (default: FALSE)
<code>fold</code>	fold for cross validation

**Value**

Single objective function for model based optimization.

---

estfun.tramnet*estfun method for class "tramnet"*

---

**Description**

`estfun` method for class "`tramnet`" which computes the score contributions w.r.t. each model parameter.

**Usage**

```
## S3 method for class 'tramnet'
estfun(x, parm = coef(x, with_baseline =
  TRUE, tol = 0), w = NULL, newdata, ...)
```

**Arguments**

x	object of class "tramnet"
parm	parameters for evaluating the score
w	weights
newdata	data on which to compute the score contributions
...	additional arguments to estfun

**Value**

Matrix of score contributions w.r.t. model parameters evaluated at `parm`

**Author(s)**

Lucas Kook

**lasso\_obj**

*Lasso objective function for model based optimization*

**Description**

This function generates an objective function for model-based optimization based on the cross-validated log-likelihood of a `tramnet` model with a lasso penalty only. It is not intended to be called by the user directly, instead it will be given as an argument to [mbo\\_tramnet](#).

**Usage**

```
lasso_obj(object, minlambda = 0, maxlambda = 16, folds,
noisy = FALSE, fold)
```

**Arguments**

object	object of class <code>tramnet</code>
minlambda	minimum value for lambda (default: 0)
maxlambda	maximum value for lambda (default: 16)
folds	self specified folds for cross validation (mainly for reproducibility and comparability purposes)
noisy	indicates whether folds for k-fold cross-validation should be random for each iteration, leading to a noisy objective function (default: FALSE)
fold	fold for cross validation

**Value**

Single objective function for model based optimization.

---

<code>logLik.tramnet</code>	<i>logLik method for class "tramnet"</i>
-----------------------------	--

---

**Description**

`logLik` method for class "tramnet"

**Usage**

```
## S3 method for class 'tramnet'
logLik(object, parm = coef(object, tol = 0,
  with_baseline = TRUE), w = NULL, newdata, ...)
```

**Arguments**

<code>object</code>	object of class "tramnet"
<code>parm</code>	parameters to evaluate the log likelihood at
<code>w</code>	weights
<code>newdata</code>	data to evaluate the log likelihood at
<code>...</code>	Additional arguments to <code>logLik</code>

**Value**

returns potentially weighted (`w`) log-likelihood based on `object` evaluated at parameters `parm` and data `newdata`

**Author(s)**

Lucas Kook, Torsten Hothorn

---

<code>mbo_recommended</code>	<i>Fit recommended regularized tram based on model based optimization output</i>
------------------------------	--

---

**Description**

Extracts the "optimal" tuning parameters from an object of class "MBOSingleObjResult" and fits the corresponding `tramnet` model

**Usage**

```
mbo_recommended(mbo_obj, m0, x, ...)
```

**Arguments**

<code>mbo_obj</code>	object return by <code>mbo_tramnet</code>
<code>m0</code>	null model of class "tram"
<code>x</code>	matrix of covariates
<code>...</code>	additional arguments to <code>tramnet()</code>

**Value**

Object of class "tramnet"

`mbo_tramnet`

*Model based optimization for regularized transformation models*

**Description**

Uses model based optimization to find the optimal tuning parameter(s) in a regularized transformation model based on cross-validated log-likelihoods. Here the tramnet package makes use of the mlrMBO interface for Bayesian Optimization in machine learning problems to maximize the cv-logLik as a black-box function of the tuning parameters alpha and lambda.

**Usage**

```
mbo_tramnet(object, fold = 2, n_design = 5, n_iter = 5,
            minlambda = 0, maxlambda = 16, minalpha = 0, maxalpha = 1,
            folds = NULL, learner = "regr.km", pred.type = "se",
            opt_crit = makeMBOInfillCritEI(), noisy = FALSE,
            obj_type = c("lasso", "ridge", "elnet"), verbose = TRUE, ...)
```

**Arguments**

<code>object</code>	object of class <code>tramnet</code>
<code>fold</code>	fold for cross validation
<code>n_design</code>	results in <code>n_design</code> times the number of tuning parameters rows for the initial design matrix based on a random latin hypercube design
<code>n_iter</code>	number of iterations in the model based optimization procedure
<code>minlambda</code>	minimum value for lambda (default: 0)
<code>maxlambda</code>	maximum value for lambda (default: 16)
<code>minalpha</code>	minimum value for alpha (default: 0)
<code>maxalpha</code>	maximum value for alpha (default: 1)
<code>folds</code>	self specified folds for cross validation (mainly for reproducibility and comparability purposes)
<code>learner</code>	type of leaner used for the optimization (default: "regr.km")
<code>pred.type</code>	prediction type of the learner (default: "se")

opt_crit	optimization criterion, default: expected improvement
noisy	indicates whether folds for k-fold cross-validation should be random for each iteration, leading to a noisy objective function (default: FALSE)
obj_type	objective type, one of "lasso", "ridge" or "elnet"
verbose	toggle for a verbose output (default: TRUE)
...	additional arguments are ignored

**Value**

returns an object of class "MBOSingleObjResult" which is documented in [mbo](#)

---

plot.tramnet	<i>plot method for class "tramnet"</i>
--------------	--

---

**Description**

plot method for class "tramnet"

**Usage**

```
## S3 method for class 'tramnet'
plot(x, newdata, type = c("distribution", "survivor",
  "density", "logdensity", "hazard", "loghazard", "cumhazard", "quantile",
  "trafo"), q = NULL, prob = 1:(K - 1)/K, K = 50, col = rgb(0.1,
  0.1, 0.1), lty = 1, add = FALSE, ...)
```

**Arguments**

x	object of class "tramnet"
newdata	data used to predict and plot
type	type of plot produced
q	vector of quantiles
prob	vector of probabilities
K	number of data points to plot
col	see <a href="#">plot</a>
lty	see <a href="#">plot</a>
add	see <a href="#">plot</a>
...	additional options to plot

**Value**

None

**Author(s)**

Lucas Kook

plot_path	<i>Plot regularization paths for "prof_*</i> " classes
-----------	--

---

## Description

Plot regularization paths and optionally log-likelihood trajectories of objects of class "prof\_alpha" and "prof\_lambda". Coefficient names are automatically added to the plot.

## Usage

```
plot_path(object, plot_logLik = FALSE, ...)
```

## Arguments

object	object of class "prof_alpha" or "prof_lambda"
plot_logLik	Whether logLik trajectory should be plotted (default: FALSE)
...	additional arguments to <a href="#">plot</a>

## Value

None

## Author(s)

Lucas Kook

## Examples

```
library("tramnet")
if (require("survival") & require("penalized")) {
  data("nki70", package = "penalized")
  nki70$resp <- with(nki70, Surv(time, event))
  x <- scale(model.matrix(~ 0 + DIAPH3 + NUSAP1 + TSPYL5 + C20orf46, data = nki70))
  y <- Coxph(resp ~ 1, data = nki70, order = 10, log_first = TRUE)
  fit1 <- tramnet(y, x, lambda = 0, alpha = 1)
  pfl <- prof_lambda(fit1)
  plot_path(pfl)
  fit2 <- tramnet(y, x, lambda = 1, alpha = 1)
  pfa <- prof_alpha(fit2)
  plot_path(pfa)
}
```

---

`predict.tramnet`      *predict method for class "tramnet"*

---

**Description**

`predict` method for class "tramnet"

**Usage**

```
## S3 method for class 'tramnet'  
predict(object, newdata = .get_tramnet_data(object),  
       ...)
```

**Arguments**

<code>object</code>	object of class "tramnet"
<code>newdata</code>	data used for prediction
<code>...</code>	Additional arguments to <code>predict.ctm</code>

**Value**

Vector of predictions based on `object` evaluated at each row of `newdata`

**Author(s)**

Lucas Kook

---

`print.summary.tramnet`      *print summary method for class "tramnet"*

---

**Description**

`print` summary method for class "tramnet"

**Usage**

```
## S3 method for class 'summary.tramnet'  
print(x, digits = max(3L, getOption("digits") -  
                     3L), ...)
```

**Arguments**

<code>x</code>	object of class "tramnet"
<code>digits</code>	number of digits to print
<code>...</code>	additional arguments

**Value**

prints textual summary in the console and returns an invisible copy of the "tramnet" object

**Author(s)**

Lucas Kook

<code>print.tramnet</code>	<i>print method for class "tramnet"</i>
----------------------------	---

**Description**

print method for class "tramnet"

**Usage**

```
## S3 method for class 'tramnet'
print(x, ...)
```

**Arguments**

<code>x</code>	object of class "tramnet"
<code>...</code>	additional arguments to <code>summary</code>

**Value**

prints textual summary in the console and returns an invisible copy of the "tramnet" object

**Author(s)**

Lucas Kook

<code>prof_alpha</code>	<i>Profiling tuning parameters</i>
-------------------------	------------------------------------

**Description**

Computes the regularization path of all coefficients for a single tuning, alpha, parameter over a sequence of values.

**Usage**

```
prof_alpha(model, min_alpha = 0, max_alpha = 1, nprof = 5,
           as.lm = FALSE)
```

**Arguments**

<code>model</code>	model of class tramnet
<code>min_alpha</code>	minimal value of alpha (default = 0)
<code>max_alpha</code>	maximal value of alpha (default = 15)
<code>nprof</code>	number of profiling steps (default = 5)
<code>as.lm</code>	return scaled coefficients for class "tramnet_Lm"

**Value**

Object of class "prof\_alpha" which contains the regularization path of all coefficients and the log-likelihood over the mixing parameter alpha

**Author(s)**

Lucas Kook

**Examples**

```
library("tramnet")

if (require("survival") & require("penalized")) {
  data("nki70", package = "penalized")
  nki70$resp <- with(nki70, Surv(time, event))
  x <- scale(model.matrix(~ 0 + DIAPH3 + NUSAP1 + TSPYL5 + C20orf46, data = nki70))
  y <- Coxph(resp ~ 1, data = nki70, order = 10, log_first = TRUE)
  fit <- tramnet(y, x, lambda = 1, alpha = 1)
  pfa <- prof_alpha(fit)
  plot_path(pfa)
}
```

<code>prof_lambda</code>	<i>Profiling tuning parameters</i>
--------------------------	------------------------------------

**Description**

Computes the regularization path of all coefficients for a single tuning parameter, lambda, over a sequence of values.

**Usage**

```
prof_lambda(model, min_lambda = 0, max_lambda = 15, nprof = 5,
           as.lm = FALSE)
```

**Arguments**

<code>model</code>	model of class "tramnet"
<code>min_lambda</code>	minimal value of lambda (default = 0)
<code>max_lambda</code>	maximal value of lambda (default = 15)
<code>nprof</code>	number of profiling steps (default = 5)
<code>as.lm</code>	return scaled coefficients for class "tramnet_Lm"

**Value**

Object of class "prof\_lambda" which contains the regularization path of all coefficients and the log-likelihood over the penalty parameter lambda

**Author(s)**

Lucas Kook

**Examples**

```
library("tramnet")
if (require("survival") & require("penalized")) {
  data("nki70", package = "penalized")
  nki70$resp <- with(nki70, Surv(time, event))
  x <- scale(model.matrix(~ 0 + DIAPH3 + NUSAP1 + TSPYL5 + C20orf46, data = nki70))
  y <- Coxph(resp ~ 1, data = nki70, order = 10, log_first = TRUE)
  fit <- tramnet(y, x, lambda = 0, alpha = 1)
  pfl <- prof_lambda(fit)
  plot_path(pfl)
}
```

**residuals.tramnet**      *residuals method for class "tramnet"*

**Description**

residuals method for class "tramnet"

**Usage**

```
## S3 method for class 'tramnet'
residuals(object, parm = coef(object, tol = 0,
  with_baseline = TRUE), w = NULL, newdata, ...)
```

**Arguments**

object	object of class "tramnet"
parm	parameters to evaluate score at
w	weights
newdata	data to evaluate score at
...	additional arguments to residuals

**Value**

Returns a numeric vector of residuals for each row in newdata

**Author(s)**

Lucas Kook

**ridge\_obj**

*Ridge objective function for model based optimization*

**Description**

This function generates an objective function for model-based optimization based on the cross-validated log-likelihood of a tramnet model with a ridge penalty only. It is not intended to be called by the user directly, instead it will be given as an argument to [mbo\\_tramnet](#).

**Usage**

```
ridge_obj(object, minlambda = 0, maxlambda = 16, folds,
noisy = FALSE, fold)
```

**Arguments**

object	object of class tramnet
minlambda	minimum value for lambda (default: 0)
maxlambda	maximum value for lambda (default: 16)
folds	self specified folds for cross validation (mainly for reproducibility and comparability purposes)
noisy	indicates whether folds for k-fold cross-validation should be random for each iteration, leading to a noisy objective function (default: FALSE)
fold	fold for cross validation

**Value**

Single objective function for model based optimization.

**simulate.tramnet**      *simulate method for class "tramnet"*

### Description

simulate method for class "tramnet"

### Usage

```
## S3 method for class 'tramnet'
simulate(object, nsim = 1, seed = NULL,
         newdata = .get_tramnet_data(object), bysim = TRUE, ...)
```

### Arguments

object	object of class "tramnet"
nsim	number of simulation
seed	random number generator seed
newdata	new data to simulate from
bysim	see <a href="#">simulate.ctm</a>
...	Additional arguments to <a href="#">simulate.ctm</a>

### Value

returns a list of data.frames containing parametric bootstrap samples based on the data supplied in newdata

### Author(s)

Lucas Kook

**summary.tramnet**      *summary method for class "tramnet"*

### Description

summary method for class "tramnet"

### Usage

```
## S3 method for class 'tramnet'
summary(object, ...)
```

**Arguments**

object	object of class "tramnet"
...	additional arguments

**Value**

Returns an object of class "summary.tramnet" containing information about the model, optimisation status, sparsity and tuning parameters

**Author(s)**

Lucas Kook

---

tramnet

*Regularised Transformation Models*

---

**Description**

Partially penalized and constrained transformation models, including Cox models and continuous outcome logistic regression. The methodology is described in the `tramnet` vignette accompanying this package.

**Usage**

```
tramnet(model, x, lambda, alpha, constraints = NULL, ...)
```

**Arguments**

model	an object of class "tram" as returned by any of the modelling functions from package <code>tram</code> .
x	a numeric matrix, where each row corresponds to the same row in the data argument used to fit <code>model</code>
lambda	a positive penalty parameter for the whole penalty function
alpha	a mixing parameter (between zero and one) defining the fraction between absolute and quadratic penalty terms
constraints	an optional list containing a matrix of linear inequality constraints on the regression coefficients and a vector specifying the rhs of the inequality
...	additional parameters to <code>solve</code>

**Value**

An object of class "tramnet" with `coef`, `logLik`, `summary`, `simulate`, `residuals` and `plot` methods

**Author(s)**

Lucas Kook, Balint Tamasi, Sandra Sigfried

**Examples**

```
if (require("penalized") & require("survival")) {  
  ## --- Comparison with penalized  
  data("nki70", package = "penalized")  
  nki70$resp <- with(nki70, Surv(time, event))  
  x <- scale(model.matrix(~ 0 + DIAPH3 + NUSAP1 + TSPYL5 + C20orf46,  
                  data = nki70))  
  fit <- penalized(response = resp, penalized = x, lambda1 = 1, lambda2 = 0,  
                  standardize = FALSE, data = nki70)  
  y <- Coxph(resp ~ 1, data = nki70, order = 10, log_first = TRUE)  
  fit2 <- tramnet(y, x, lambda = 1, alpha = 1) ## L1 only  
  coef(fit)  
  coef(fit2)  
}
```
